WORLD OF INDIAN FINANCE

Friday, July 7.

Except for a slight hardening on the closing day due to the usual "Friday" pressure, credits were, throughout the week, in extremely plethoric supply, with borrowers totally uninterested even at so low a rate as ½ per cent. There is every reason why the slackness in monetary conditions should receive further emphasis, while it is difficult to see any circumstance which can make a drastic change in the current phase of money. In this connection, it is interesting to study the figures of Treasury Bills sales in the last three weeks. On June 20, accepted tenders amounted to Rs. 1½ crores; and intermediates sold between June 14 and June 19 came to Rs. 73 lakhs. On June 27, total amount accepted was Rs. 1½ crores while intermediates amounted to Rs. 2.12 crores. Referring to the Imperial Bank's statement for the week ended June 30, we notice that securities are higher by nearly Rs. 1 crore. Even after allowing for routine transactions, it is safe to assume that the Imperial Bank should have taken, in that week, Treasury Bills for anything between Rs. 70 lakhs and Rs. 85 lakhs. This means that though intermediates sold from June 21 to June 26 appear large at Rs. 2.12 crores, a good part of it is accounted for by investments from "special quarters." This impression is confirmed on a study of the Treasury Bills figures on the auction day of this week. On July 4, accepted applications only came to Rs. 1.05 crores; and intermediates sold between June 28 and July 3 were Rs. 1.24 crores. It is obvious that the interest of the market in three months Bills is tending to become lukewarm. On June 20, total applications by tender came to Rs. 2.71 crores; on June 27, these dropped down to Rs. 1.56 crores; on July 4, they were Rs. 1.65 crores. During this period, except for the interest taken by special quarters, the total sales of intermediates would not amount to more than Rs. 3½ crores. At the same time, the average rate of accepted tenders disclosed a rising tendency. From Rs. 1-1-10 per cent. per annum on June 20, the rate rose to Rs. 1-2-9 on June 27, and Rs. 1-2-11 on July 4. Even by the offer of a slightly increased rate, the Government could not secure their full quota of Rs. 1½ crores. It would appear that since the increase in the weekly offer from Rs. 1 crore to Rs. 1½ crores and since the inauguration of intermediate Treasury Bills, all that has happened is that the Indian joint stock banks and the Imperial Bank have accounted for larger purchases; but the exchange banks as such are totally uninterested. So far as the total resources are concerned, to the extent that funds are released from Treasury Bills Maturities, most of it is bound to find its way back into Treasuries. This is all that has happened during the past month. The increased sales of Treasuries have, therefore, made no difference in the monetary situation.

Taking all these factors into consideration—the slender size of total applications received on the auction day, the uprising tendency in the average rate of accepted tenders, the decreasing sales of intermediates—we are inclined to think that three months Bills at current rates have over-stayed their welcome. There is no point in continuing to rely entirely on a mode of short-term borrowing which has ceased to exercise any great appeal. There should now be no delay in the inauguration of six months Bills, though we would like three months Bills to be kept up in addition. Six months Bills should be utilised for the replenishment of the Treasury; and three months Bills should be kept as a handy device for monetary control especially as the international financial situation is now overhung with uncertain factors.

Decision in this matter will, we presume, be made on the further basis of the results of Treasury Bills on and up to next week's auction. We are not hopeful that intermediates in the current week would come to any great figure. It was reasonable to expect that in the last week of June, bankers would stand aloof from Treasury Bills as they would have liked to maintain as much cash balance as possible in the interest of what has come to be known as "window-dressing" for the closing of half-yearly accounts. It follows that as soon as the need for such window-dressing operations are over, bankers should have taken up Treasuries with increased avidity. Nothing like this happened on the tender day in the first week of July. This is all the more surprising as considerable amounts were released to the market by the repayment of the 4 per cent. 1931-36 loan. Payment was made in Calcutta on June 30 and in other centres on July 1; the total amount involved was Rs. 4.18 crores. It may be reasonably assumed that of this amount, at least Rs. 3 crores must represent the holdings of banks

and like institutions in money market circles. In other words, there were special factors that should have induced a heady volume of applications on July 4. In spite of such factors, total applications received were only a few lakhs more than the amount on offer. And the rates quoted by banks were such as to result in the Treasury being able to accept only Rs. 1 crore and odd.

While Treasury Bills have not benefitted from the funds set free from the 1931-36 conversion loan, giltedge has, however, shown some improvement. Such improvement as has taken place is much less than what one might expect from the release of funds of the order of Rs. 3 crores. In these days when the giltedge market has been in doldrums, we should, we suppose, be grateful for small mercies. 3½ per cent. Rupee Paper, which closed at Rs. 80-8 last Friday, rose to Rs. 81-12 and closed at Rs. 81-7, thus recording a rise of nearly one point in the week. 3½ per cent. New Loan has come in for considerable attention at the hands of investors, recording a steady rise, without a setback, from Rs. 90-13 to Rs. 92-2. 4 per cent. 1960-70 moved up from Rs. 95-4 to Rs. 96-8 to close at Rs. 96-2. 5 per cent. 1945-55 has advanced from Rs. 110-12 to Rs. 112-2. The scrip which has been in most request in 1940-43 which has spurted up from Rs. 104-6 to Rs. 105-8. While no portion of the amount that flowed into the market from the 1931-36 loan has found its way into three months Treasury Bills; while some portion of it has certainly been diverted to some of the existing securities, a substantial proportion of the released funds is still in the market. This may be construed as a bull point in the giltedge situation; and equally propitious influences are in store. But the market has had too severe a shock in the *debacle* after the 3½ per cent New Loan to resume interest in giltedge with anything but considerable restraint.

Under the circumstances, we should think that sales of intermediates in the current week should be on the small side and tenders next Tuesday should not be such as to encourage the hope that the ways and means adjustments could be smoothly effected by sole reliance on three months Bills. However, Treasury Bills operations during June have resulted in a considerable improvement of the ways and means position of the Treasury. In discussing the June problems from this standpoint, we made the following comment in our last week's issue:

> Heavier sales of Treasuries this week should enable Government to effect further reductions in ways and means advances. Moreover, June is a month which is fairly satisfactory from the point of view of Government revenue. Land tax in certain provinces like the Punjab and Bengal is payable in June. There is, therefore, a surplus on current revenue-expenditure account during this month. All these circumstances taken into consideration, we are inclined to think that in the statement of the Imperial Bank for the week ended June 30, which will be issued next Thursday, ways and means advances may show a further shrinkage of Rs. 2 crores".

The statement of the Imperial Bank for the week ended June 30 shows, in fact, an even better position than our forecast. Ways and means advances stand at Rs. 1 crore, showing a reduction of Rs. 3 crores since June 23. On July 1, however, the usual month-early disbursements should have accounted for Rs. 1½ crores to Rs. 2 crores. In addition, at least Rs. 3½ crores of the Rs. 4.18 crores of 1931-36 loan should have been paid out. That is, while ways and means advances stood at Rs. 1 crore on June 30, they should have again mounted up to Rs. 4 crores or thereabouts in the first week of July. From the point of view of current revenue-expenditure, July is not a favourable month. The month would, therefore, start with ways and means advances to the Bank restored to near the old level; no relief is to be expected from current revenues; if only three months Treasury Bills were on offer, the realisations therefrom should be on the small side; and fairly heavy commitments have to be made. If, as we expect, sales of intermediates as announced next week will prove to be small, there is every reason to expect that the long-looked for announcement of the introduction of six months Bills will be made next mid-week.

The market has been dull—very, very dull, as one banker said—the dullest week for a long time, as another described it. Business was in doldrums. There has been little offering on either side of the books. Rates have remained unchanged but steady. On the weekly tender day, against £1 million on offer, £455,000 was applied for at 1s. 6 1/16d., and allotted in full.

The closing rates are: 1s. 6 1/32d., T.T. up to October with 1s. 6 3/64d., available for July T.T.; 1s. 6d., November-December T.T. and 1s. 5 31/32d., January-March T.T.

Bills may be quoted: 1s. 6⅛d., right through; and bankers were asking full rates.

Money was extremely easy, with credits going abegging at ½ per cent. On Friday, however, some interbank business was reported at ½ per cent. Union rates for call, three days and seven days notice money were quoted ½ per cent. to ¾ per cent. One-month, twomonth and threemonth deposits quoted 1,1¼ and 1½ per cent respectively.

Our Bombay Correspondent Wires:

Money continued unlendable, the nominal rate being ½ per cent. Banks are reluctant takers of even long deposits.

The giltedge market is broadening with considerable fresh investment enquiry alround, the Government decision not to issue Treasury Bills longer than three months supporting enquiry for short-dated securities. Though long-dateds are not favoured, there are no keen sellers in the market. 5 per cent. tax-free 1945-55 is in great demand up to Rs. 112. New Loan also is attracting attention at Rs. 92 without finding sellers. Further improvement in prices is likely though rapid improvement is checked by weaker London advices.

FINANCE ABROAD

The direct conflict between the depreciation of the dollar and the progress of the World Economic Conference has been best brought out during the last two weeks by the steady and rapid rise in the sterling-dollar cross-rate since the proposals of the Bankers' Conference at London were first turned down by President Roosevelt. The important developments of the week in this regard are a fresh statement by President Roosevelt in reply to the proposals of the gold standard countries that (1) it is necessary to maintain the gold standard in all countries still adhering to the gold basis; (2) all countries that have left the gold standard shall return, if possible to gold; (3) the stabilisation of a ratio and the moment for stabilising must remain the concern of each country independently; and (4) the countries at present on the gold standard have firmly decided to defend their position at any cost. Later, there was a conference between Prof. Moley, M. Bonnet, Signor Jung and Sir Frederick Leiss Ross for a reconsideration of the final draft formula for submission to a meeting to be held at Downing Street. This draft indicated that the gold standard may be achieved at some future date but urged international control to eliminate the wide speculative fluctuations of currencies. These drafts were forwarded to Mr. Roosevelt and it is well known that, pending the arrival of Roosevelt's reply, the World Economic Conference was at a standstill. The gold standard countries were not very hopeful that Mr. Roosevelt would evince any attitude helpful to the further conduct of the Conference. And there was actual canvassing among the gold standard countries for supporting the motion for adjournment of the World Economic Conference.

Mr. Roosevelt's reply which was communicated to the Conference in the form of a statement by Mr. Cordell Hull as Secretary of State, gave the reasons for the rejection of the proposal for the temporary stabilisation of currencies. In this statement, Mr. Roosevelt, in effect, questioned the alleged intimate relation between the proposals for stabilisation and the task for which the World Economic Conference was convened. He urged that the Conference was called to better, and, if possible, to cure, fundamental economic ills and that it would be, therefore, a tragedy if the Conference were to be diverted from the broader problems of real and permanent stability and the greater prosperity of the masses of all nations by the proposal of a purely financial and temporary experiment affecting a few nations only. He affirmed that a sound internal economic system is a greater factor in a nation's well-being than the price of its currency in terms of other currencies, and also that the question of stabilisation of exchanges is the concern only of a few countries, and even in such countries it is a question for the respective Treasuries to settle according to their lights. The President has, however, been careful not to expose himself to the charge that he has under-rated much less wholely overlooked, the importance of the monetary factor in the task of reconstructing the world economic system. America's policy, he urged, was the permanent stability of the currencies of all nations; and she seeks a dollar which a generation hence would be of the same value as that which she hoped to attain in the near future. As for the problem of the better distribution of the world's gold and silver supplies, the President thinks that such questions can be discussed only when nations have begun to live within their means. The present problem, therefore, narrows itself down to one of reducing the embargoes on trade; and such a reduction, in the opinion of Mr. Roosevelt, would be a truer answer to the problem of trade restoration than the temporary fixing of exchange rates.

It should not be overlooked, at the same time, that while President Roosevelt has thus given an effective check to the attempt to put the question of stabilisation over all the other issues before the World Economic Conference, he does not express opposition to the inform co-operation of the central banks to reduce fluctuations. The course of the sterling dollar cross-rate during the week does not, however, strengthen the hope that such informal co-operation between the Bank of England and the Federal Reserve Bank could at all be possible. For, as against 4.26 early in the week the closing rate was 4.49½. The effect of the combined factors of rejection and stabilisation proposals and a steep fall in the external value of the dollar on the prospects of the Conference are well known and are examined at greater length elsewhere in this issue. Here it should be useful to examine their effects on the near prospects of international exchanges. It is well to note that such informal understanding in regard to the elimination of speculative fluctuations has subsisted for nearly a month between the central banks of France and Great Britain. The franc rate has been, to all intents and purposes, steady roundabout 86; and the foreign papers confirm the view that such stability is to be attributed to the existence of some sort of understanding between the two central banking authorities.

The negotiations and manœuvres in the World Economic Conference regarding the question of the stabilisation of the exchanges have put the British Delegation in a somewhat delicate position. As an off-gold country, Britain could not be counted among the close *bloc* of gold standard countries intent on securing the return of the deserters at any cost. Nor could she overlook the fundamental conflict of interests and ideals between herself and America, where the sting of the inflationary programme is yet far away at the tail. As in most other international problems, the British temperament and the British position alike thrust upon the representatives the role of a mediator or an intermediary between the two extreme viewpoints. It is a matter for gratification that in spite of the delicacy of such a position, there is no reason to suspect that the cordial relations between France and Great Britain, which resulted during recent months in the extension of the British credit to the French Treasury and the understanding between the two central banks in regard to sterling-franc exchange, have not been strained in any perceptible manner. There is, thus, little reason to fear that the sterling-franc rate will, as a result of the break-up of the Conference, break away from its old moorings and float hither and thither in uncharted seas. Far different is the case of the dollar. There are, at present in England, two schools of thought; one favouring a stable link between the dollar and the sterling and the other preferring a pegging of the sterling-franc rate. It may be easily guessed that the advocates of the former are thinking of the dangers to the British export trade arising from the continuous and aggravated depreciation of the dollar. Those who advocate pegging the sterling to the franc apparently overlook the consequences of the break-up of the World Economic Conference on the position of the gold standard countries. It is true that these countries have repeatedly, during the course of the Conference during the last two or three weeks, emphasised their determination to adhere to the gold standard. They have even gone to the length of attempting to get from Mr. MacDonald the assurance of the support of the Bank of England for such currencies as may be threatened by speculative bear raids. The extent of such raids was amply shown in the threat to the franc which followed the reimposition of the embargo on gold in America in April last. Though the franc has, undoubtedly, recovered from the effects of that attack, there still can be no doubt that the break up of the Conference would be the signal for the resumption of more confident and more determined attacks on the

(Continued on page 29).

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

WHY YOU SHOULD SHOP AT
CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE.

(From our correspondent).

Calcutta, July 6.

Jute.—This section opened steady on Monday with Howrahs at Rs. 51-15 and Kamarhattys at Rs. 498-8. As the day advanced, an easier tendency set in owing to uncertainties about the fate of the Economic Conference. Another factor which helped to bring about an easier feeling in the market was a decrease of only 15 lacs in the stocks of hessians as against 1 crore which was the general expectation. Besides this, the stock of heavy goods is expected to rise by about 2½ crores. On Tuesday the market was in a hesitating mood due to the announcement of the acreage forecast for jute for the season 1933-34. The general expectation was between 22 and 23 lakhs of acres but the figures as announced by the Director of Agriculture came up to 24,79,800 acres as against the total crop of 21,431,000 acres for last year. As soon as the figures were known, hessians dropped to Rs. 11 and jute to Rs. 32. Howrahs came down to Rs. 50-2 from Rs. 51. This easiness did not last long because on Wednesday jute recovered the lost ground and improved to Rs. 33-5 while hessians in sympathy with a steady commodity market touched Rs. 11-5, Howrahs also improved from Rs. 50-10 to Rs. 51-3. Among the bigger denominations, Anglo-India were firm at Rs. 375, Aucklands changed hands at Rs. 192, but later on had sellers at Rs. 190, Ballys came to business at Rs. 157-8, Barnagores at Rs. 145, Cheviots had sellers at Rs. 230 ex-dividend, while Orients came to business at Rs. 215 ex-dividend. There were buyers of Gourepores at Rs. 360, Kanknarrahs were firm at Rs. 457, on rumour of same or may be even better dividend than for Kamarhattys. Naihattys changed hands at Rs. 410, Standards at Rs. 352, Dalhousies at Rs. 380, Lothians at Rs. 286-8 ex-dividend, Unions Rs. 410, Hooghlys Rs. 69-8, Reliance Rs. 73-8, Hukumchands Rs. 18, Nationals Rs. 23-4 and Clives Rs. 28. The London-New York cross rate touched the high level of 4.48 which is the highest since England went off the gold standard on September 21, 1931. The closing tone of the market was steady and the tendency was towards further improvement.

Cotton.—There is nothing to report in the section with the exception of a solitary deal in Muir Mills at Rs. 250.

Coals.—This section was steady and although the volume of business was not very large, still good stocks at current rates had ready buyers. Amalgamated came to business at Rs. 12-4, Burra Dhemos were placed at Rs. 4-2, Naziras were wanted at Rs. 6, Raneegunj were a shade easier at Rs. 29-8, Bokaros were placed at Rs. 6-4, Pench Valley were steady at Rs. 30-12, Sendras changed hands at Rs. 5-12, Standards at Rs. 24, Bhulanbararees had ready buyers at Rs. 5-8, with few sellers.

Miscellaneous:—Among Sugars, Balarampurs changed hands at Rs. 11-10 while Carew & Co., was steady at Rs. 16-8 on Re. 1-8 dividend, Cawnpores had a few buyers at Rs. 35-4, Murree Brewery had more buyers than sellers at Rs. 170 and shares were difficult to obtain. Champarans were unchanged at Rs. 27-8, while Ryams were little better at Rs. 46. In the Mining group, Burma Corporation were steady at Rs. 9-2, on London advices. Indian iron had sellers at Rs. 4-2, while Bengal iron were unchanged at Rs. 2-2, Tata Iron and Steel ordinary and second preference were firm and advanced to Rs. 56 and Rs. 90 on Bombay advices. Indian standard wagon after a recent drop to Rs. 40 improved to Rs. 45, B. I. C. ordinary, had buyers at Rs. 14 while a big parcel of deferred changed hands at As. 12. Bombay was chiefly interested in these and was quietly buying at advancing rates. Cawnpore appeared interested in deferreds but could not secure any because buyers were not inclined to increase their prices. Preferences were wanted up to Rs. 113. Indian Wood Products had sellers at Rs. 32-12. Calcutta Ice came to business at Rs. 6-12. Bengal papers were wanted at Rs. 70 with few sellers while Titaghur, ordinary, changed hands at Rs. 14 but had buyers at Rs. 14-4 at the close. Bengal paper, preference, were placed at Rs. 63 (50 paid up). Humayun properties recorded a few deals at Rs. 8-12, while Midnapore Zemindaries were wanted at Rs. 70. In Electric concerns, Daccas were wanted at Rs. 15, Patnas at Rs. 12-12 while Benares had buyers at Rs. 11-12 sellers demanding Rs. 12, Shahjahanpur and Gorakhpur came to business at Rs. 6 and Rs. 6-8. Among Shipping concerns, Port Shipping were dealt at Rs. 12-8. The recent enquiry for Calcutta Landing and Shipping appears to have been satisfied for the present while there were buyers for Bengal Assam with no sellers.

Light Railways and Banks.—There was very little turnover in Bombay shares. Darjeeling Himalayan Railway, Prefs., were placed at Rs. 89, while Delhi Rohtas were dealt at Rs. 8-4, ex-dividend, Baraset-Basirhet were quoted Rs. 50, Darjeeling Himalayan Railway, ordinary, Rs. 79, Mymensingh Bhairab Bazar guaranteed Rs. 83-8, and Sara Sirajgunj Rs. 85. Among Banking concerns, Central Banks were unchanged at Rs. 21-12, Imperial Banks fully paids and Contributories were dealt at Rs. 1,200 and Rs. 295.

Government Securities.—This section was firm and 3½ per cent. improved to Rs. 81-12 on strong Bombay market. 3½ per cent. 1947-50 was better at Rs. 92-2, 5 per cent. 1945-55 improved to Rs. 111-14. There was strong enquiry for short dated bonds with very little offering. The general tendency of this section is towards higher levels. Bank rate remained unchanged at 3½ per cent.

Teas.—Although the volume of turnover was limited still prices were well maintained. It is surprising to find that although Auction sales are fetching better prices for common teas, prices are not making any response. It is expected that with a little more confidence in the market, higher prices are likely. Betjans were placed at Rs. 21-8, Bishnauths at Rs. 19-12, Hantaparas Rs. 332, North Western Cachar Rs. 250, Teliaparas Rs. 375, Tengpani Rs. 14-4, Hattikhiras Rs. 14-4 and Sonai River Rs. 14-12. There was good enquiry for Dauracheras at Rs. 11-12 with few sellers.

BOMBAY STOCK EXCHANGE.

(From our correspondent).

(*By Wire.*)

Bombay, July 6.

The market, which is closed to-day, has been fairly active and wide during the week.

Government securities steadily improved, 3½ per cent. Rupee Paper advancing from Rs. 80-9 to Rs. 81-10 and closing at Rs. 81-8.

Mill shares were slightly easier except Swadeshi, Century and New Great which remained very steady.

Cement shares ruled quiet excepting Shivrajpur which yesterday spurted up from Rs. 16-2 to Rs. 19-8.

Imperial Bank old issues came up from Rs. 1,192-8 to 1,205.

In view of approaching half-yearly dividends, bank shares were enquired for, Imperial Bank old issues coming up from Rs. 1,192-8 to Rs. 1,205 and partly paids Rs. 293. Bank of Indias remained steady at Rs. 103-8.

Bombay Steam ordinaries rose from Rs. 285 to Rs. 290.

In the electric section, Andhra Valley, Tata Hydro and Bombay Tram ordinaries looked up due to demand. Andhras closed at Rs. 1,406, Tata Hydros at Rs. 154-10 and Tata Powers Rs. 980. The most noticeable feature was heavy buying by option dealers of Tata ordinaries which came up from Rs. 53-10 to Rs. 57. Second Preferences and Deferreds advanced from Rs. 86-8 and Rs. 220-10 to Rs. 91 and Rs. 229-6 respectively.

New India Assurances have risen sharply to Rs. 23-12.

The following will show the fluctuations in prices:—

	Close on June 29	Highest in week	Lowest in week	Close on July 6
	Rs. A.	Rs. A.	Rs. A.	Rs. A.
Bombay Dyeing ...	817 8	826 4	...	804 12
Fazal	372 8	375 0	366 4	367 8
Pearls	243 12	247 8	...	238 12
Century	248 12	253 2	...	250 0
New Great ...	185 10	193 12	...	185 10
Swadeshi ...	277 8	285 10	...	283 12
India Cement ...	275 0	276 11	274 6	275 0
Bombay Tram ...	136 4	140 5	...	193 11
Andhra Valley ...	1,387 8	1,410 0	...	1,406 4
Tata Hydro ...	153 12	155 10	...	154-11
Burma Old ...	402 8	408 12	...	395 10

COAL.

There is no sign of activity in the market: Sellers have reduced their prices to the lowest limits possible with a view to stimulate demand, but there has been no adequate response.

The prices are nominally as follows:—

	Per ton. Rs. A. Rs. A.
Victoria, Desherghur and Poniati ...	3 12
Other Raniganj	2 0 to 2 8
Super Selected Jherrias	3 12
Selected Jherrias	3 8
Other Jherrias	2 4 to 3 0

JUTE AND JUTE GOODS

JUTE.

(From our Correspondent.)

Comparatively wider fluctuations have taken place in the value of raw jute during the week under review. Up to the time of publication of the preliminary jute forecast on Tuesday, July 4, the business was very much restricted. Since its publication fairly large business was done by shippers in Calcutta market and also in London. At the time of writing, however, the tone of the market is quiet but steady.

As reported last week, the area for 1932 has been revised from 19 to 21.43 lakhs of acres by the Director of Agriculture, Bengal. The area under jute during the year 1933 is estimated at 24.97 acres. The detailed district figures are as below:

Estimated area under jute in acres.

Name of District	Last year	This year
24-Parganas	46,400	61,000
Nadia	27,600	36,000
Murshidabad	14,600	21,000
Jessore	48,700	70,000
Khulna	22,600	31,000
Burdwan	2,100	3,000
Midnapore	5,500	5,000
Hooghly	19,100	34,000
Howrah	4,100	4,000
Rajshahi	63,000	91,000
Dinajpur	50,000	59,000
Jalpaiguri	27,600	32,000
Darjeeling	2,300	2,000
Rangpur	218,000	252,000
Bogra	70,000	85,000
Pabna	65,000	80,000
Malda	19,400	30,000
Dacca	254,800	265,000
Mymensingh	474,500	566,000
Faridpur	147,500	150,000
Bakarganj	28,900	32,000
Chittagong	300	300
Tipperah	179,000	183,000
Noakhali	35,400	50,000
Cooch Behar	23,100	25,000
Tripura State	1,200	1,400
Total Bengal ...	1,845,700	2,168,700
Bihar and Orissa	170,000	190,300
Assam	127,400	120,800
Total for Three Provinces	2,143,100	2,479,800

According to the private agencies the area was estimated to be not over 23 lakhs of acres and according to some, the present forecast is expected to be a little over-estimated by about a lakh of acres.

The forecast as published is a bearish one. The raw jute futures which ruled near Rs. 33-8 per bale before the publication of the forecast touched Rs. 31-12 after the publication. The prices in the ordinary course with a large crop would have dropped further down but the market still pins its faith to the area of 23.5 lakhs and consequently after the decline the values have again risen to Rs. 33 per bale.

According to the Government figures of 24.79 lakhs of bales, the normal outturn can be estimated to be near 82 lakhs of bales. The weather conditions this season have been exceptionally favourable and the growth of the plant very satisfactory. If no damage to the crop takes place during its harvesting period, it is believed that the outturn this season might be somewhere in the vicinity of 85 to 90 lakhs of bales, a quantity which is just a little more than what is required by the world at the present rate of curtailed production.

Against 85 lakhs as the probable figure for production, the requirements at the moment are estimated as below:

Calcutta mills ...	43	lakhs of bales.
Mills abroad ...	34	,, ,, ,,
Extra factory ...	5	,, ,, ,,
Total ...	82	,, ,, ,,

Thus it means that after the year's requirements, there may be an extra surplus of 2 to 5 lakhs of bales left in the hands of the producers traders or mills. Thus, unless the world demand for raw jute shows any improvement in the meantime, the present stocks in the hands of mills, traders and producers will remain more or less unchanged except with the increase in the extent of production over 82 lakhs of bales.

One thing I would like to state at this place is that the stocks in the hands of Calcutta dealers and balers are slightly larger than last year, but the same in the hands of small dealers and producers in the mofussil is very small; consequently the carry over this season from the last season's crop will be comparatively small. If the jute brings a little higher price than what is ruling now, to the cultivator, the excess of the production of the current season may not all come to port towns immediately but may be held over till the end of the season or even for the next year.

The estimated production, however, does not warrant any appreciable rise in the value of raw jute independent of other commodity markets in general and jute goods in particular. I have fully dealt with the probable trend of the market in my last week's report and I still hold the same opinion. The market has not taken the report as fully bearish.

It is quite probable that during this month a steadier tone may prevail. The full effect will be however visible during the following months. The goods market is also showing signs of weakness. Satistically, the position of hessians is quite strong but that of heavy goods is far from satisfactory. I shall not be surprised if the latter hangs heavily on the former and thus lowers down the values of hessians as well, which is commanding an extra high premium over the other goods. Towards the close of the week extra large business in pucca bales is done by the shippers here. This was the accumulated buying pending the jute forecast. Business has been done from Rs. 29 to Rs. 29-8 for something like 50 thousand bales in the course of two days. The buyers at the moment seem to have been satisfied. That such a large business was done without any rise in values shows the selling pressure of the market and its inherent weakness.

JUTE CROP.

Messrs. Sinclair, Murray and Co., in their final jute crop report for the week ended July 1, say:—

General.—Weather conditions have continued satisfactory. Rivers are rather low and some districts report shortage of steeping water. (As far as we can ascertain at this period, the outturn from this year's crop is likely to be approximately one anna more than last year's outturn.).

Narayanganj.—The weather has been favourable. Plants are healthy and range in height from 4'—6" to 7'—6". Owing to the low state of the river and lack of steeping water, cutting is practically suspended. River is rising slowly but is still 1'—6" lower than at this date last year.

Chandpur.—Favourable conditions have continued. Plants are healthy and range in height up to 7'—4". Cutting is proceeding slowly on *chur* and low lands. The river is at about the same level as at this date last year.

Upper Ganges Valley Electricity Supply
COMPANY, LIMITED

NOTICE

is hereby given that an Extraordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Tuesday, the 18th July, 1933, at 4-5 p.m., for the purpose of considering and, if thought fit passing the subjoined resolution as an addition to Article 105 of the Company's Articles of Association and another Extraordinary Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Tuesday, the 15th August, 1933, at 4-0 p.m., where the said resolution will be submitted for passing as a Special Resolution.

"As long as there are Shareholders in the districts of Bijnor and Moradabad qualified according to the Article 106 to be Directors and approved by the Government of the United Provinces, one Director shall be appointed from each of the districts of Bijnor and Moradabad".

By Order of the Board,
MARTIN & CO.,
Managing Agents.

CALCUTTA,
The 30th June, 1933.

Chaumuhani.—Weather conditions have been favourable. Plants are healthy and range in height from 4″ to 8″. Cutting is proceeding steadily.

Akhaura.—Conditions have been very favourable. Plants range in height from 4′—9″ to 6′—9″. Cutting is proceeding very slowly. The river is rising steadily and is at about the same level as at this date last year.

Niklidampara.—The weather has been very favourable, and the condition of the crop is satisfactory. Cutting is proceeding slowly. The river is rising steadily but is still about 2 ft. lower than at this time last year.

Sarishabari.—The weather has been favourable. The condition of plants is satisfactory and they range in height from 5 ft. to 7 ft. Cutting is proceeding freely on low lands. The river has risen 2 ft. during the week but is still approximately 3 ft. lower than at this date last year.

Mymensingh.—The weather has been favourable. Plants are in good condition and range in height from 5 ft. to 7 ft. Very little cutting is going on owing to shortage of steeping water. The river has risen about 6 in. during the week but is still well below last year's level at this date.

Serajgunge.—Conditions have continued favourable. Plants are healthy and range in height up to 7 ft. 6 in. Cutting is going on steadily. The river has risen 1 ft. 4 in. during the week but is still approximately 3 ft. lower than at this date last year.

Bhangoora.—Weather conditions have been satisfactory. Plants are healthy and range in height from 2 ft. 6 in. to 7 ft. 9 in. Cutting is proceeding on low lands. The river has risen 2 ft. during the week and is at about the same level as at this date last year.

Madaripore.—Conditions have been satisfactory. Plants are healthy and range in height from 4 ft. 6 in. to 6 ft. 6 in. Owing to scarcity of steeping water cutting is proceeding very slowly. The river is steady and slightly lower than at this date last year.

As a basis of comparison we take last season's crop as 16 annas.

JUTE MANUFACTURES.

The hessian market after ruling very steady during the earlier part of the week, was quiet towards the close. Valnes have declined from Rs. 11-14 to Rs. 11-2 per 100 yards for August.

The rise that took place especially on Friday and Saturday was due to bear covering and in anticipation of a further reduction in the stocks of hessians. But the statistical position as revealed goes to show that instead of reduction, stocks of hessian at the end of June are larger than what they were at the end of May, 1933. The estimated stock is about 7.25 crores of yards.

The position of heavy goods is far from encouraging. Stocks are accumulating month after month and stand at higher than what they were estimated a few months ago. The estimated stock of heavy goods in Calcutta at the end of June, 1933, amounts to 16.94 crores of years.

The short time working arrangement that was agreed upon by the various jute mills in Calcutta provided for closing down of 15 per cent. of hessian looms. The result has been that the production of hessians has been thus kept low, and brought to such limits that it has been possible to reduce the stock of hessian month by month. On the contrary there is no such provision for the sacking looms. The arrangement, if I remember right, provides that any particular mill when it so desires can change sacking looms. The recent rise that has taken place in the price of hessian, when the price of heavy goods has almost remained un-

changed, must be a sufficient inducement for some of the mills to change heavy goods looms into hessian producing ones. This, in the long run, may go to help reduce further accumulation of heavy goods stocks, but its immediate effect would be to add to the stock of hessians. This is a bear factor by itself and how far and when it will make its effect felt must be decided by other factors that come into play in the meantime.

Business during the week has not been of any considerable dimensions. The purchases by overseas buyers for near positions have already been made. Consequently there is neither much of a buying activity visible nor is there felt any pressure to sell. The fluctuations are, however, comparatively violent. The statistical position is so sound that bulls do not feel nervous and the slightest demand that comes into the market immediately causes the prices to go up. But at the same time the prices of nine porter hessians being exceptionally high, when compared with other sorts, immediately bring a sharp decline on even weak bear news and factors.

The unsatisfactory developments at the World Economic Conference and the fears about its breakdown or adjournment have already had their effects felt in the weakness of the market. The rise in the value of sterling in terms of dollar, represented by the rise in the cross-rate to 4.52¼ has also affected the Indian exports to U.S.A. adversely. Since a very large portion of hessian is exported to America, the unfavourable exchange has and will continue to depress the price of hessian.

Although there is no inherent weakness in the market, looking at things as they are at the moment, it appears that the rise is overdone; and even if the market does not positively fall, at any rate, a further rise at the moment seems to be arrested.

Long holders must be careful to keep low now. Although there has been a fair amount of business reported done for October-December positions it is doubtful if the entire production for these months has been booked by buyers abroad. The immediate near positions are at a heavy premium, it is therefore desirable that longs should transfer their interests to positions forward, but the commitment in my opinion should be only to the extent of half their capacity so that in case any further decline takes place it will be easy to average them down.

Inflation in America is going on in full swing. America has been able to take up the advantage of a depreciated currency through inflation. England is now hard hit and it is to be seen what steps she will take to get over her difficulties. The opinion of experts has been that although the immediate effects of the inflation have been good, and U.S.A. has been able to raise her internal commodity prices, in the long run the policy will not prove to be so advantageous as it appears to be on the face of it. Those in the trade are not in favour of a clear rise now. Ambiguity and suspense have possessed the minds of many, therefore it seems desirable to wait and watch the situation for some time.

COTTON AND COTTON GOODS

COTTON.

(*By Wire.*)

Bombay, July 6.

The prevalence of unfavourable weather has caused rapid improvement in cotton textile trade. The statement that dollar is still undervalued the emphatic rejection by Roosevelt of currency stabilisation proposals and further depreciation in dollar raised American cotton prices. But yesterday, New York October after opening at 10.75 closed at 10.38⅝ due to unfavourable rains in Texas and feeble response of farmers to acreage reduction scheme.

Local Broach rates also fluctuated as follows during the week:

	Close on June 29	Highest	Lowest	Close on July 6
	Rs. A.	Rs. A.	Rs. A.	Rs. A.
Broach July- Aug. ...	210 12	215 12	206 8	208 0

PIECEGOODS.

During the period under review there has not been much change in the piecegoods market in Calcutta. The tone of the market, however, has remained fully steady, this being due mainly to the increase in the price of cotton in America and to a small extent in India.

The demand from consuming centres has continued to remain dull, the upcountry buyers being interested in effecting purchase only for bare necessities. The stocks are fairly large and the offtake that takes place in the meantime does not have any material effect on the price of piecegoods.

Business on the other hand for fresh deliveries has been very poor. The Lancashire trade, which one showed good interest is again on a decline and a much restricted business is passing. Japan, however, has been ignored altogether and there has been no new business for the last several weeks. Indian mills have been able to book some standard lines and styles for the next few months' delivery. It was believed that possibly due to the increase in the imports duty on non-British piecegoods, Indian Mills might reduce their price limits, but so far the anticipations have not been realised.

BULLION

GOLD.

(By Wire.)

Bombay, July 6.

Asadh rate for gold came from Rs. 30-6 to Rs. 30-14-6 due to steady decline in sterling franc-rate from 86.06 to 85.06.

The London gold market is gradually improving for the last two weeks and the latest price available was £6-3-7 per oz. In sympathy with the London market local values have also improved to Rs. 30-8 per tola and sovereign to Rs. 19-11 per piece. Stocks in Bombay are on the increase and are estimated at about 4 lakhs of tolas, while in Calcutta they are estimated at about 25 thousand tolas. Gold market is once again active and arrivals of distress gold in port towns continues to increase. Export activity is also more brisk ; exports per S.S. *"Cathay"* amounting to gold worth Rs. 87 lakhs. The total exports since England went off the gold standard have been near Rs. 1,40 crores. If the price of gold improves further, greater activity in the gold market will be noticeable. Offtake for internal consumption does not show any improvement.

London—(Air Mail Week):

There has been no change in the general condition of the market here. In the open market large amounts of gold are available. There was keen competition on the part of Continental buyers, with the result that the prices ruled again above the parity with the French exchange. The average age of the quotations during the week was 122s./1.75d.

The following were the United Kingdom imports and exports of gold registered from midday on the 12th instant to midday on the 19th instant:

SILVER.

(By Wire.)

Bombay, July 6

Silver rates here comparatively ruled quiet fluctuating within a range of about 8 annas only. To-day's rate is weak, Asadh rate being quoted at Rs. 56-12 at at 5-30 p.m.

There has been a small decline in London as well as Calcutta silver prices on balance during the week. The fluctuations, however, remained within very narrow limits. Local silver has declined from Rs. 57-12 to Rs. 57-5. The market was lifeless and there was no home or London markets. Big operators have not been doing anything of importance and the turnover is very small. Stocks and offtake remain almost unchanged as reported last week.

London—(Air Mail Week):

The outstanding feature of the week was the announcement of the Chancellor of the Exchequer on the 14th June, regarding the understanding arrived at with America whereby she was to accept a payment of $10,000,000 in silver, as an acknowledgment by Britain of the war debts instalment due to America on June 15. The silver, it was stated would be accepted by America at 50 cents per fine ounce, and the requisite quantity had been acquired from the Government of India.

In view of the fact that the silver had been secured without recourse to the market, and that some such arrangement had been anticipated, the effect seemed to have been discounted and consequently the market did not show the reaction which might have been expected. What happened was rather the contrary, as, after only a slight improvement, a slightly easier tendency was in evidence. American sellers realised some of their holdings. In the New York market, the likelihood of action being taken to stabilise the dollar exchange caused some weakness, and silver declined in sympathy with a general downward movement.

There have again been sales on Continental account, and buying has been still mostly of a speculative nature. Some fresh purchases have been made by the Indian bazaars, but there has also been some reselling from the same source.

The stocks in Shanghai on the 17th June consisted of about 131,200,000 ounces in sycee, 270,000,000 dollars and 6,960 silver bars, as compared with about 130,500,000 ounces in sycee, 265,000,000 dollars and 6,960 silver bars on the 10th June.

The following were the United Kingdom imports and exports of silver registered from midday on the 12th instant to midday on the 19th instant:

CALCUTTA,
The 5th July, 1933.

TEA.

On July 3 and 4, Sale No. 4 of the season was held, when about 15,000 packages of tea, with export rights, 4,300 packages of leaf and 3,600 packages of dust for internal consumption were offered for sale. As compared with the previous week the offerings were larger and more representative. Quality teas from Assam was useful, Darjeelings improved, while Dooars showed a distinct falling off.

There was a good general demand for all leaf grades. Pekoes and Pekoe Souchongs were in demand at 3 to 6 pies per lb. dearer. The sale when compared with the previous week was distinctly better.

London.

At the London auctions on July 3 and 4, 33,100 packages of Indian and 26,600 packages of Ceylon tea respectively were offered for sale. There was a good general demand. An improvement of a farthing per lb. was noticeable in Indian common and low medium qualities. Other grades showed a firmer tendency, the demand for export being better. Among Ceylon teas light liquoring medium qualities were rather irregular and easier, while cheaper grades generally fetched a farthing per lb. higher. The best sorts realised good prices.

QUOTATIONS:

The following were the lowest prices fetched for Indian Tea during the auction:—

	Last auction per lb.	This auction per lb.
Common Pekoe	8½d.	8½d.
Common Broken Pekoe	8d.	8⅛d.
Common Orange Pekoe	8¼d.	8¼d.
Common B. O. Pekoe	8⅜d.	8⅜d.
Common B. P. Souchong	8⅛d.	8½d.

The following are the value prices:—

Clean Common Pekoe	8⅛d.	8½d,
Clean Common B. Pekoe	8½d	8⅝d.
Clean Common O. Pekoe	8⅜d.	8⅝d.
Clean Common B. O. Pekoe ...	8⅝d.	8¾d.
Clean C. B. P, Souchong	8¼d.	8½d.

For Ceylon Tea the following were the lowest prices fetched:—

	Last auction per lb.	This auction per lb.
Common Pekoe	8d.	8⅛d.
Common Broken Pekoe	8⅛d.	8½d.
Common Orange Pekoe	8d.	8⅛d.
Common B. O. Pekoe	8⅜d.	8½d.

The following are the value prices:—

Clean Common Pekoe	8½d.	8⅝d.
Clean Common B. Pekoe	8⅛d.	8¾d.
Clean Common O. Pekoe	8½d.	8⅝d.
Clean C. B. O. Pekoe	9d.	9d.

London sales in the meantime have given evidence of an improved tendency of the market. Even for internal consumption the demand was keen and better values were paid.

The crop figures have been a steadying factor. The decrease up to the end of June is estimated to be 10 to 12 millions lbs. less than the previous year.

The details of the sale No. 4 are as below:

	1933 Chests Offered	Sold	Average
Export Leaf ...	14,910	13,783	-/8/-
Internal Leaf ...	4,339	3,509	-/5/-
Consumption Dust ...	3,648	3,506	-/4/7

Tea Exports from India.

From Northern India from April 1, to July 4:

	1933-34 lbs.	1932-33 lbs.
To U. K.	19,908,921	25,445,217
To outports	1,795,769	3,297,671
To Indian ports	2,438,535	3,129,888
Total ...	24,138,225	31,872,776

From Southern India from April 1, to May 31

	1933.	1932.
To U. K.	8,143,006	9,886,734
Total exports	8,735,449	10,743,216

When compared with the exports of the period April to June, 1931, the exports during the same period in 1933 have dwindled from Northern Indian ports from 23 million lbs. to 20 million lbs. to U. K. 3.8 million lbs. to 1.8 million lbs. to outports and 3 million lbs. to 2.4 million lbs. to Indian ports. The total exports have come down from 30 million lbs. to 24 million lbs.

The main decreases have been in case of U. K. Canda, Egypt, Persian Gulf, Red Sea, and Straits Settlements, while on the contrary, Australia has taken more than what she took in 1931-32.

SUGAR

The market during the period under review has remained more or less unchanged with a steadier undertone. Demand has not been very brisk and the business is confined to 'spot' and 'to arrive' goods.

Stocks in Calcutta are estimated at about 4,700 tons, while the stocks in the main Indian ports are:—

(In bags, 10 bags-1 ton.)

		1933.		1932.
Calcutta	... (June 21)	44,430	(June 22)	48,700
Bombay	... (,, 22)	40,000	(,, 22)	65,000
Madras	... (,, 19)	4,000	(,, 20)	26,000
Karachi	... (,, 23)	72,500	(,, 24)	60 000
Rangoon	... (,, 19)	8,420	(,, 20)	20,600

The season for Indian sugar being over, the supply of the indigenous product has slackened. Mango season also will be soon over; it is therefore expected that the tone of sugar market will be improved during the following months.

Bombay.

The rise that took place in Bombay market, chiefly on the shortage in stocks has proved short-lived, and the rumour that Holland may go off the gold standard weakend the market considerably. The unsatisfactory progress at the world Economic Conference and the limited turnover in the local market had anything but a desirable effect.

The following are the quotations for Sugar:

Upper Jumna Valley Electricity Supply COMPANY LIMITED.

NOTICE

is hereby given that an Extraordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Tuesday, the 18th July, 1933, at 4-15 p.m., for the purpose of considering and if thought fit passing the subjoined resolution as an addition to Article 105 of the Company's Articles of Association and another Extraordinary Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Tuesday, the 15th August, 1933, at 4-5 p.m., where the said resolution will be submitted for passing as a Special Resolution.

"As long as there are Shareholders in the Districts of Saharanpur, Muzaffarnagar and Meerut qualified according to Article 106 to be Directors and approved by the Government of the United Provinces one Director shall be appointed from each of the districts of Saharanpur, Muzaffarnagar and Meerut".

By Order of the Board,
MARTIN & CO.,
Managing Agents.

CALCUTTA,
The 30th June, 1933.

WHEAT.

Due to the rise in the American wheat values, and in sympathy to linseed, which witnessed a fairly good rise during the previous week, the local wheat market was also steady in the earlier part of the week. But the rise was not well maintained by trade buying. Long holders came out as sellers on the rise and the futures was not able to absorb the same at the top. Recent reports of good rains from the wheat growing districts in India, and increase in the stock in port towns was another factor which had a damping effect on the market. The demand for wheat products has continued to remain dull and trade buying consequently was small at the rise.

The wheat acreage reduction scheme had a steadying effect in the beginning, but the chances of its satisfactory conclusion at the moment appearing remote, the market is not inclined to give much importance to it.

The wheat prices in India in comparison to the world parity are higher, therefore unless world prices move to such high levels as would encourage Indian exports in larger quantities, there is little to justify any immediate rise in the value of local wheat. However, the market seems to remain narrow and fluctuate within small limits. One local big speculator is reported to be holding very large quantities and with his option deal he may come out as seller at further rise.

The world markets also in the meantime have remained more or less featureless with a restricted trading. The supplies are definitely in excess of requirements and therefore no sensational development can be anticipated.

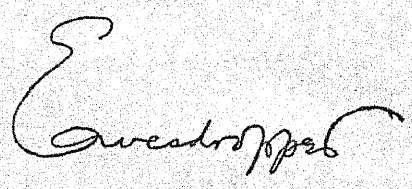
(*Continued from Page 34*)

India's purchasing power is bound to be increased; and who will benefit from it more than Britain? America and India are two self-contained countries which can carry out inflationary programmes without any serious effect on their own financial position and without detriment to international finance. On the other hand, an increase of mass purchasing power in these two countries will prove to be the most decisive factor in enabling the world to recover appreciably and rapidly from the present depression.



The National Indian Life Insurance Company, Limited.

(Incorporated in India, 1907)

PROCEEDINGS of the Twenty-first Ordinary General Meeting of the qualified Policyholders of the Company held at the Registered Office of the Company, 12, Mission Row, Calcutta, on Friday, the 30th June, 1933. at 11-15 a.m.

Present:

In Person:—S. P. Bose, A. Borah, A. T. Pal, S. K. Gupta, P. C. Bonnerjee, S. S. Dutt, B. Srimany, I. Alston.

Sir Rajendra Nath Mookerjee, K.C.I.E., K.C.V.O., having taken the Chair the Notice calling the Meeting was read, and it was:—

Proposed by—S. P. Bose.
Seconded by—A. T. Pal.

That Mr. B. Sreemany be and is hereby re-elected a Director.

Carried unanimously.

Proposed by—P. C. Bonnerjee.
Seconded by—B. Srimany.

That Mr. R. K. Barua, M.A., be and is hereby re-elected a Director.

Carried unanimously.

With a vote of thanks to the Chair the Meeting terminated.

R. N. MOOKERJEE,
Chairman.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

REVIVAL OR SURVIVAL?

If the World Economic Conference is to die, it takes an unconscionably long time in dying. Every day brings its packet of disheartening news; and up to the moment of writing nothing is known except tactical adjournments of the Bureau of the Conference and valiant efforts on the part of certain sections of international statesmen to provide artificial respiration. The fact of the whole matter is that, as Lord Snowden pointed out on the eve of the Conference, there was so little preliminary preparation for a matter in which preliminaries count a great deal, are, in fact, the whole of the business. Our Overseas Columns this week deal at length with the difficulties which confronted the various committees and sub-committees and the depressing politics which is connected with the whole Conference. Mr. Ramsay MacDonald's enthusiasm for the Conference and his passion for the fame of making it a success have lacked all practical value. He has not even troubled to bring the views of his own Government into tune with the ideals of the Conference, The standpoint of the British Government will be found on careful analysis to be at least as unhelpful as that of the American Government. The fault of the latter lies in evincing a too fussy interest in the Conference before it met and presenting later on an attitude which is set off in a worse light by the contrast. America cannot, perhaps, have helped initiating the inflationary policy at the time she did; but if she had come into the Conference without the fanfare of the Washington conversations and stuck to her inflationary programme, the attention of the world might not have been concentrated on her so-called obstructionism. Other tactical blunders, too, have aggravated the American policy. There is little reason to think that, when the Bankers' Conference began in London, the American representatives went into it with any clear-cut ideas as to the policy of the Administration at home or the extent to which they could interpret it to the foreigners. Nor does the President himself appear to have made up his mind about the attitude he would take in regard to the vital question of stabilisation. It is possible that the President and his advisers had decided in favour of watching the developments before taking, or refraining from taking, any step. In the opening week of the Conference they might have watched the effect of the rumours of stabilisation on the various domestic markets. As the slump in prices left them in no doubt in this regard, they decided on repudiating the American representatives and throwing overboard the whole scheme of stabilising the currency. Having done this, any apologetic attitude on this question would not be in keeping with the dignity of the world's creditor nation; and the earlier announcement of Mr. Roosevelt on this subject showed a stiffness of attitude which was duly reflected in the Conference in London.

* * *

It would appear, however, that, despite all the indifference which America affects towards her financial and commercial relationship with the rest of the world, she is no more prepared for the hasty break up of the World Conference than Great Britain or Japan or Germany. The latest statement of President Roosevelt is drafted in a more argumentative and conciliatory vein; and this has served to retard the efforts that have been made for over a week to get the Conference adjourned. Up to the moment of writing, nothing definite is known about the decision of the Bureau of the Conference or about the final attitude of the gold standard countries after Mr. Roosevelt's explanation. It must have appealed a great deal to the gold slandard countries that American devaluation would be robbed of its terrors if other countries would take similar, if by no means identical, steps to raise their own price levels. Nor is it a less potent argument that America made no bones when France or Britain devaluated her currency and depreciated her exchanges. But how far these explanations would revive a Conference, which had clearly the look of death on the first week of its existence, remains to be seen.

* * *

If we may attempt to describe by a trite similie, the position that obtains now, we might say that the question is one of whether the effect on the Conference of the American attitude towards stabilisation is that of poison or chloroform or mere local anæsthesia. The Americans, doubtless, contend that it is the last mentioned and that the activities of the other limbs need not be affected by an injection of cocaine in one part. The gold standard countries have taken the view that the overthrow of the scheme of stabilisation is tantamount to administering a fatal potion to the Conference. If, in this case, as in most others, it should prove that truth lies midway between the two extremes, the Conference should ere long regain full consciousness and a degree of vitality and vigour.

* * *

It would then be necessary to examine the lines on which the work might be further prosecuted. There is indeed, a degree of obvious exaggeration in the French view that without stabilisation of the exchanges nothing can be profitably attempted. For the proceedings so far have shown that France is prepared to concede that the time and the rate of stabilisation may be left to the discretion of each country, provided the principle of an early return to the gold standard were admitted. At the same time, it is inconceivable how any progress could be made with the reduction of tariffs unless trading nations know what each currency would be worth in terms of gold and other currencies. Financial opinion in London seems to be of the view that, once America has experimented with inflation to her heart's content, then it would be easy to conclude the labours of the Monetary Commission. But the Sub-Committees of the Economic Committee are also confronted with fundamental differences of opinion. We are thus thrown back on producers' agreements; and here, too, the Wheat Conference has been no more successful than the other offshoots of the present World Conference. If the meetings in London are enabled to continue for some time more without getting panicky over the disappointments regarding America, the world could have more or less proofs that the problems of the present depression cannot be solved by a World Conference.

* * *

For our part, we are inclined to the view that the continuance of the London Conference would ultimately tend to strengthen the incipient scepticism in an international solution. America, for her part, is going ahead with her own programme of revival of industry. Britain has been doing the same, though preaching a different lesson to others all the time. President Roosevelt's contention that a rise in national price levels may be attempted independently by each country has a validity which it is not

only futile, but dangerous, to deny. Even more important is isolated action regarding the revival of national industry. For the conclusion of any international agreement, even if it were possible, would be either hedged in with special provisos or drafted in too general terms. That the statesmen believe otherwise is due to the fact that they blind themselves to the true nature of their tasks. They still believe that the agreements can be arrived at by putting together a few well-accepted principles of international trade. What happens in fact is that each nation accepts such general principles in the deep conviction that they apply in full to others and that as regards itself they have to be qualified in certain respects. A view like this, when held by all nations, is hardly conducive to any progress. The claim for exceptions is alround, even as the acceptance of the general principles. The task of the World Economic Conference would probably have been much simpler, if it had met at the end of 1930, when most countries were on the gold standard, when exchange control and other barriers to trade had not sprung up, and quotas dwelt only in the brains of ingenious faddists. Not that economic nationalism was less pronounced than now. But it had not taken definite forms or reared formidable vested interests in each country. At that time the statesmen were inclined to under-rate the complications of this phase of world economy and slighted the warnings of the more far-seeing economists. The result is that the last two years have seen each nation ploughing a lone furrow. Mr. Roosevelt, in effect, pleads that this method of cultivation might be given a chance at least so far as monetary problems are concerned. With an alround devaluation, coupled with a repudiation of the gold clause, the raising of price levels should be both easy and effective. We wonder whether at the present stage, there is any other alternative. If the Conference should succeed in saving itself from an adjournment, it would have barely survived. A revival, in the sense of regaining vitality and vigour, seems out of the question.

THE WHEAT POSITION.

Various circumstances have tended to invest wheat with even more than its usually high importance. Firstly, wheat, besides being the staple food of the greater part of the world population, is a basic commodity an increase in the price of which would go far to restore the equilibrium between purchasing power and productive capacity. Secondly, the Wheat Conference in London, which has been attempting to bring about a producers' agreement behind the scenes of the World Economic Conference, is almost alone among the various committees in being able to release hopeful reports of its doings. Thirdly, there have, according to all reports, been such serious changes in the stock and crop position that a re-examination is definitely called for. The principal features of the world position, apart from the prospects of the harvest, are easily sketched. The difficulties of the producers of wheat may be said to have started in 1928, when there was a bumber crop and the resulting carry-over of 845 million bushels was 350 million bushels more than the stock usually left over at the end of the season. In the subsequent years, the carry over had been increased to 849 million bushels. It is interesting that on May 1, of this year, stocks in the principal exporting countries were 49 million bushels larger than on May 1, 1932. At the same time, the stocks in importing countries other than Russia and the Danubian Basin were also larger. World shipments declined, with the result that as at the middle of June, the shipments were 150 million bushels less than a year ago. From this, one might reasonably conclude that the world carry-over at the beginning of the month will be at least equal to the carry over on July 1, 1932, which is, undoubtedly, the largest on record.

* * *

This accentuation of a large stock position may be attributed, in large part, to the increase of trade restrictions consequent on the intensification of economic nationalism in the wheat-importing countries in Europe. The lines on which such restrictions of the import trade in wheat have been imposed are only too well known. France, for instance, insists upon millers growing 100 per cent. of home-grown wheat, a provision which is tantamount to a total prohibition of imports. Italy requires the inclusion of 95 per cent. of local wheat in its flour ; and Germany has, in addition to a virtual prohibitive tariff, also evolved in recent months a comprehensive quota system. These restrictions are inspired by the desire on the part of the importing countries to grow all the wheat they need, regardless of costs. That such restrictions deprive the country of the advantage of cheap food is altogether overlooked, though it must be recognised, in justice, that in some cases such restrictions have been necessitated by the need for the readjustment of the balance of trade and payments between one country and the other countries with which it may be trading. In the long run, the persistence of a protectionist policy in regard to wheat cultivation must result in the contraction of wheat sowings in exporting countries, with a consequent reduction in supplies and, equally, the danger of Europe suffering a shortage of supplies in the event of a poor crop.

* * *

During the last year, the loss of the import countries in Europe has been made up, to some extent, by the emergence of demand for wheat in China. The fall in the price of wheat has induced a new demand in the Far Eastern countries and for a

time it looked as though China would come to figure as one of the important wheat consuming countries of the world. But at present, China has sufficient wheat and flour at least for some time; and there is no report of considerable business having been transacted between Australia and China during the last two months. A similarly unexpected development, though on somewhat small scale, is the report of Russian purchases of 2 cargoes of Argentine wheat in April last and the continuance of further enquiries in that country. It is not clear whether the wheat was intended for the Black Sea or Baltic Ports. But it points to the possibility of a food shortage in Russia, of which we shall have to say more at a later stage.

* * *

It is in such a position that the prospects of the harvest have to be considered. It is by now certain that the United States winter wheat crop is likely to suffer a reduction. But the damage to the winter crop has had the effect of increasing the area sown for the spring crop. For the farmers, who have suffered, are naturally making desperate efforts to retrieve the position by making the most of their spring crop. But should the spring crop meet with any mishap, the large carry-over in the States would be substantially decreased in meeting internal needs. As for Australia, it is reported that persistent dry weather has damaged crop prospects and that as in Argentina the bulk of her 1932 crops has been already shipped.

* * *

It is about Russia that the widest diversity of opinion is entertained. The following table taken from the *Economist* of June 24 gives the figures of acreage sown to spring wheat in the various wheat-growing areas of Russia.

RUSSIAN SPRING SOWINGS ON JUNE 5, 1933.
(In thousand acres)

	1930	1931	1932	1933
Central Blacks Zone ...	14,900	16,000	14,600	15,000
Lower Volga	12,800	17,000	15,400	14,400
North Caucasus ...	19,800	20,700	20,500	17,600
Crimia	1,100	1,000	1,100	1,100
Ukraine	43,700	41,000	35,000	36,200
Total, Southern Surplus area	92,300	95,600	86,600	84,400
Total of Northern and Central Europian Asia ...	45,700	62,700	57,600	63,200
Urals	10,100	12,900	10,400	9,400
Siberia, East & West ...	8,400	15,300	17,500	20,000
Total of Asiatic Russia ...	43,000	60,200	59,600	59,500
Official Total, all U.S.S.R.	180,900	208,500	203,700	207,000

It will be seen that though in the total of 207 million acres, there is no striking disparity from the previous year's and is even one million acres less than 1931, the figures in the case of other regions show serious fluctuations. The most noteworthy features are a decline in the two areas Ukraine and North Caucasus from 45.1 million acres in 1930 to 20.7 million acres. It is probable that most of the decrease in the winter wheat was located in this area. The increase in the acreage of Siberia may be attributed to the anxiety of Russia to make up for the loss in the normal wheat-growing regions by extension of the acreage in the less favoured, and even less known, area outside. The *Economist* is particularly sceptic of the increase of 12½ million acres in a thinly populated area like Siberia. But it is necessary to note that though the disparity between 1930 and 1933 is so marked there is, at the same time, a steady progress in the figures of acreage attributed to this area, the only big jump being in 1931 to 60.2 million acres from 43 million acres in the previous year. Considering that such progress has not been confined to agriculture and that Soviet authorities have been able to produce similar results in other departments of economy, it seems that the unwillingness to take these figures at their face value is not well grounded in facts. But whatever may be the internal situation, so far as the world wheat markets are concerned, the export possibilities of Rusia seem to depend entirely upon Siberia. The *Economist* points out that similarly inflated acreage figures were issued last year but neither Soviet export policy nor even the internal food situation appears to have been appreciably advantaged.

* * *

But it should not be forgotten, at the same time, that the export policy of the Soviet is not governed by the considerations of profit but determined by the Soviet's requirements of foreign exchange. If a situation should arise in which the U.S.S.R. cannot do without foreign exchange, all that the Government could lay hands on would be exported. The *Economist* concludes that the possibility of important

wheat exports in the coming season appear to rest on the following assumptions :

1. That figures purporting to show Siberian sowings at 20,000,000 acres, as compared with 8,400,000 acres in 1930, are credible.
2. That such sowings will produce a reasonable crop in that arid country.
3. That the authorities will be able to collect it.
4. That they will still face the risk of withholding such collections from the industrial population in order to export it.
5. That the Soviet budgetary position is strong enough to carry the loss involved in such exports.
6. That transport is available.

None of these conditions can be expected to be satisfied. The chances are that, even if Russia is able to realise an export surplus in wheat, it will not be sufficient to cause the same serious disruption in the foreign markets as was caused in 1930 and 1931. It may also be added that even during those years Russia sold her wheat at lower prices, not so much because she was anxious to dump and to beat down prices, as because she had an intelligent anticipation of the very low levels which wheat would before long attain. Similar anticipations of the future at the present time must retard, rather than stimulate, the flow of Russian wheat to foreign countries.

* * *

With so many uncertainties involved, it were best, perhaps, to consider the position as apart from the prospects of the Russian harvests and exports. Considered that way, the Canadian exporters seem to be in the most favourable position. The commercially visible supply of wheat in that country is approximately 210 million bushels and another 40 million bushels are in transit. Out of this 220 million bushels, only 10 million bushels might be expected to be sold before the beginning of the next crop year. The carry over will thus be the largest in Canadian history. But canada has no reason to fear an intensive competition during the coming year. With the present trend of commodity prices, the U.S.A. is not likely to compete effectively in the foreign markets; and with the present programme of the Secretary of Agriculture for reduction of acreage, the future production will also be considerably diminished. The most heartening feature is that competition in the export markets will be considerably reduced and this, of itself, should help to raise the level of prices. The figures of stocks which we gave in the beginning of the article serve to create a highly bearish outlook. But taking the long view and considering the place of wheat in world economy; the rate of increase in the world's population and the measures that are being taken to help the recovery of world trade, it seems fair to conclude that the turn in the trend of wheat prices will not be long to come.

IMPUDENT LORD LLOYD.

Lord Lloyd, in the company of crusty diehards like Sir Reginald Craddock and Sir Michael O'Dwyer, has been carrying on a virulent propaganda against India's national aspirations. Apart from the bad taste in a man who had eaten of India's salt traducing her sons, Lord Lloyd is the one Governor who perpetrated blunders so stupendous in character and so many in number that if he had but a sense of decency and commonsense, he would have easily realised that he was the last person who could throw the first stone. If he seeks to deny India her rights because, in his view, Britain will suffer thereby, he is welcome to hold such a view. If, however, he wishes to put back the hands of the clock so far as India's political progress is concerned, on the plea that Indians are unfit or inefficient or liable to corruption, well, the answer is that Lord Lloyd was, as a Governor, inefficient, unfit, irresponsible and hardly worthy of the great trust imposed on him. He made a statement the other day that there was no municipality in India which did not, in recent times, crash into bankruptcy again and again. The man who was responsible for converting the prosperous province of Bombay into a bankrupt province is hardly the person who can talk of the bankruptcy of little municipalities. The following censure by the Committee of Enquiry appointed by the Government of India into the Back Bay Reclamation Scheme is unique in the sense that, in recent times, no Governor has had his judgment and actions described in such scathing terms :

> Though we are aware that a Governor must necessarily rely on his advisers for the details of any scheme, yet having regard to the personal interest displayed by Lord Lloyd, as disclosed by his evidence and that of Sir George Buchanan, we are surprised that his acute intelligence overlooked the apparent inadequacy of Sir George Buchanan's figures, even though he held the belief that the 1912 figures of Mr. Kidd were to some extent inflated. . . . To a lesser extent we are surprised that Lord Lloyd, when reading Sir George Buchanan's report, did not notice that Sir George Buchanan described the clay as hard while Messrs. Simons and Co. were putting forward an offer for a soft clay dredger.

Even an Anglo-Indian journal like the *Times of India* is forced to admit that "of all men in India and England, Lord Lloyd is surely the last who should talk disparagingly about Indian municipalities 'crashing into bankruptcy.'" How Lord Lloyd made the Bombay province the first to inaugurate the era of provincial budgetary deficits is thus described by our Bombay contemporary :

> For the ten years ending March 31, 1931, the schemes undertaken by the Bombay Development Department have caused provincial revenues (excluding capital expenditure) a net amount of Rs. 718 lakhs, and the present annual net debit to the revenue account of the Presidency—the cost of interest and sinking fund less the revenue receipts—is about Rs. 62 lakhs a year. This staggering burden is directly attributable to Lord Lloyd's policy. Bombay has, as further monuments to Lord Lloyd, the empty chawls and the barren sea-face at Worli, partly to pay for which the town duty on cotton was levied, thereby diverting trade from the port, while the Bombay Municipal Corporation will shortly have to take over the Improvement Trust with its huge liabilities and annual loss of Rs. 35 lakhs largely due to Lord Lloyd's pet schemes, thus laying a fresh load on the back of the Bombay City taxpayer.

It is sheer impudence, in the face of such a record, that Lord Lloyd should thus add insult to injury. Yet, it is people of his calibre who seem to have had the biggest say in the shaping of the final proposals as adumbrated in the White Paper.

TEST PAPER ON LAW AND ORDER

BY G. L. M.

(Concluded from issue of June 30).

Below is the second instalment of the paper which, it is suggested, should be set to students to test their sense of loyalty to the bureaucracy, their distrust of political leaders and their respect for "law and order" as interpreted from time to time by special and emergency laws, by ancient Regulations as well as new Ordinances, by traditions no less than innovations.

It is asked whether special marks would be assigned for hand-writing. Undoubtedly. But the proportion will be less in the case of candidates of the minority communities. As the exact percentage has been referred to the Prime Minister for being settled in accordance with the principle (if any) of his communal award, it will be declared later. But if candidates are to be eligible for a special certificate, their writing should be at least legible. Illegible writing will render them ineligible. Gandhiji has remarked that bad handwriting is a form of violence. Judged by this test, many of us are terrorists and liable to be held up under one legislation or another for dealing with revolutionaries. To avoid such trouble, the editorial staff of *Indian Finance* dictate and have for some time at least the consolation of being dictators—almost on a par with Mussolini, Stalin, Hitler, Kemal Pasha and the Provincial and District Congress Dictators. But this is by the way. A hand-writing expert will be employed where papers seem not only illegible but illegitimately alike.

The time assigned for the answers is not fixed. It will vary according to the age, educational standard, sex, community, sub-caste and district of the candidate. Time, said Einstein, is relative. So are merits—in India. The Hindus believe in eternity and nothing less. They live upto Oscar Wilde's maxim that punctuality is the thief of time. The Hindus ask the "untouchables" to be re-born in order to have their sins fully expiated and to get the privilege of being touched. In this birth, they only touch the money of the untouchables. But there is no hurry. The deluge is still far-off. Time therefore should be no consideration in these replies. Defenders of law and order will not surely offend Hindu susceptibilities about time.

The examiner's decision will be final and the editor's decision will be fatal.

PART III—POLITICS.

1. (*a*) State the number, dates, months and years of the three successive Round Table Conferences held in 1930, 1931 and 1932 including their auxiliary, subsidiary and supplementary Committees? Explain in round terms their advantages, results, implications, complications, repercussions, etc.

(*b*) Deplore the difficulty in remembering their names but mention in excessive detail how many of these Committees were standing, how many sitting, how many touring as also which were consecutive and which simultaneous?

(*c*) Would the question to Old Kasper "what good came of it at last" be pertinent in this connection even if it sounds slightly impertinent?

2. How would you confuse—
   (*a*) agitation with sedition?
   (*b*) nationalists with anarchists?
   (*c*) a political movement with rebellion?

3. Is the Congress in a minority or a majority or either or neither.

(Answer vaguely but firmly with some reference to a few facts.)

4. How would you dispose of:—
   (*a*) A Picketter?
   (*b*) A Solicitor (*i. e.* one who solicits)?
   (*c*) A Hunger Striker?
   (*d*) A Striker for More Food (*e.g.* a Labour Striker)?

(*Use of compass and other instruments is allowed.*)

5. Stigmatise strongly
   (*i*) Anti-untouchability movement.
   (*ii*) Khadi.
   (*iii*) Anything which Mr. Gandhi does.

(*Dwell on their hidden political motives and ruminate fearlessly on his subtle stupidity and astute short-sightedness.*)

6. If it came to it, would you prefer (*a*) heavy sentence and light *lathi* charge or (*b*) light sentence and heavy *lathi* charge? Which do you consider will intensify your loyal instincts and deepen your love for law and order?

(*State your reasons at enormous breadth.*)

PART IV-ART (INCLUDING COLOUR-SENSE).

1. Is the *White* Paper so-called because it was issued from *White* Hall? Are both of them so named because they uphold the *White* Man's Burden?

2. Would you call the Empire Day or the May Day a Red-Letter Day? If both are red, why? And how will you distinguish between the red colour of the Empire and of the Bolsheviks?

(*Reply with red pencil or red ink.*)

3. Can the Meerut trial be called drawing "a *red* herring across the path"?

(*Avoid contempt of court in reply.*)

4. Congress leaders have no redeeming features. Illustrate.

PART V-SCIENCE: ASTRONOMY.

1. Is Mars a Red Planet? Will you have commercial relations with it?

2. If the sun never sets on the British Empire, how do its statesmen come under the influence of the moon so often?

3. Would you describe Mr. Jayakar as a star or a satellite in the firmament of Indian politics?

4. Is Dewan Chamanlal a meteor or a comet?

PART VI-SCIENCE: MEDICINE.

1. Explain the medical significance of the following with clinical references and dietetic preferences:—

   (*a*) *angle of vision*: at what angle does the vision of British Democracy become right?

   (*b*) *change of heart*: Would the shape of the heart of a bureaucrat remain the same even after it has changed through voluntary suffering?

   (*c*) *lobar pneumonia*: how is it preferable to psimple pthisis in home internment?

   (*d*) *hydrophobia*: if barking dogs are set free and let loose and bite the members of the continuous caravan, what treatment would you prescribe?

2. Are you prepared to over-eat yourself for preventing the passage of the Temple Entry Bills? If so, how often and how long? What would you like to over-eat?

(Continued on page 54.)

WORLD ECONOMIC CONFERENCE

NEWS OF THE WEEK AND AIR-MAIL WEEK

(From Our Special Correspondent)

(*By Cable*).

London, July 7.

Needless secrecy is being jealously maintained about the discussions and decisions of the Bureau of the World Economic Conference. But is is certain that Mr. Roosevelt has instructed the American Delegation to exert their utmost to ensure to continuance of the Conference. There is reason to think that the gold standard countries in tabling the motion for adjournment only intended to stampede America into a modification of her views. But the more reasoned tone of Mr. Roosevelt's later statements has obviated such tactics. The ground was, therefore, well prepared for Mr. Cordell Hull to establish that stabilisation was hardly essential, much less indispensable, for the considertaion of the agenda While the adjournment motion might, perhaps, have been voted out, its spirit will not have been completely exercised. Delegates are confessing to each other more freely than before that the continuance of the Conference would only shift the blame for failure from America to all the nations.

June 29.—There is more hopeful outlook among the delegates to the World Economic Conference on the question of stabilization, and a definite move towards an agreement is considered likely as the result of a conference which Professor Moley, Economic Adviser to President Roosevelt, had with a number of delegates to the Economic Conference. Those countries that are still on the gold standard are alarmed at the speculative depreciation of the dollar which would subject their currencies to a severe strain, and are urging Mr. MacDonald to persuade the Bank of England to make a definite declaration on stabilization, and, if necessary, to promise British support to currencies on the gold standard. It is understood that, while Britain is prepared to give assurances of moral support, she has refused to enter into definite commitments. It is also understood that if the Bank of England gives the required assurance, the *Banque de France* is prepared to protect the Dutch guilder and the Swiss franc from speculative attack.

June 30.—The clouds of the stabilization issue still hang over the Conference, and there is as yet no indication of an easing of the critical situation which has resulted from the demand of the European gold countries for an immediate agreement on stabilization. Professor Moley has informed Mr. MacDonald that the "United States was not prepared to discuss stabilization, but might be interested in an international exchange device to prevent speculative fluctuations of currency without interfering with America's inflationary policy."

The British Government's policy is one of mediation, with a view to reach an agreement between the gold and the non-gold countries. But Britain has to cope with the attitude of the Dominions who strongly favour a sterling-dollar link, rather than pegging the pound to the franc. If the former is not possible, they desire that the sterling *bloc* should be consolidated.

It is understood that France, Italy, Holland and Switzerland, the countries on gold, Germany standing apart, have drafted a resolution in "definite terms" to be presented to the United States and Britain. The nature of the resolution is described rather as an ultimatum.

July 1.—The following are the general terms of the resolution submitted by the five 'gold countries' to the United States and Britain last night :—

> It is necessary to maintain the gold standard in all countries still adhering to gold. All countries that have left the gold standard shall return, if possible, to gold.
>
> The stabilisation of a ratio, and the moment for stabilising must remain the concern of each country independently.
>
> The countries at present on the gold standard have firmly decided to defend their position at all costs.

All delegations including that of the United States, have approved of this text. President Roosevelt's adherence is necessary before further progress can be made. His reply is eagerly expected. There are fears, however, that an unfavourable reply may be received. This is suggested by messages stating that President Roosevelt considers that stabilisation is a banking, rather than an economic, problem, which it is not necessary to consider at the present stage of the conference. Further, it is doubted in the United States whether the countries still on gold can remain there. Hence the desire to postpone stabilisation until currencies find their true levels.

It is generally believed that a provisional agreement will be reached on the question of wheat restriction during the next week.

July 3.—The expected statement of Mr. Roosevelt has been issued through Mr. Cordell Hull, as secretary of State, rejecting the proposal for the temporary stabilization of currencies and giving his reasons for the decision. The feeling of pessimism at the conference has been accentuated, and there is a possibility that Switzerland may move the adjournment.

The following are the more important points contained in President Roosevelt's statement :—

A sound internal economic system is a greater factor in the well-being of a nation than the price of its currency in terms of other currencies.

It would be a world tragedy if the conference were diverted from broader problems to a purely temporary experiment.

America's policy is the permanent stabilisation of the currencies of all nations.

She seeks a dollar, which, a generation hence would be of the same value as that which she hopes to attain in the near future. The better distribution of the world's gold and silver supplies could be more properly discussed when nations begin to live within their means.

Reduction of trade embargoes is a truer answer to the problem of trade restoration than the temporary fixing of exchange rates. This was not the time to dissipate gold reserves.

Gold countries are now turning their eyes to Britain for a lead, and possibly Britain may act, though it is said that countries on the gold standard are to act independently of Britain and the United States and intend to proceed on a common policy conducted by their Central Banks. They also contend that, if they were to stand out of the conference, the other nations will be able to achieve little.

World Economic Conference.

July 4.—It appears to be almost certain that the World Economic Conference will adjourn.

The Bureau of the Conference has been asked to adopt a recommendation to this effect, by a committee of the six big powers, and the Bureau was due to meet the previous night to convene a plenary session of the conference the next day.

Only Britain and the United States appear to be opposed to an adjournment. According to Reuter the alternatives before the Conference are :—

1. Complete abandonment of the Conference.
2. Maintaining the skeleton of the machinery of the Conference in operation.

3. An adjournment until an agreement on stabilisation is reached. It is considered that the latter will most probably be adopted.

Representatives of France, Belgium, Italy, Holland and Switzerland, have signed a joint declaration stating that the respective countries formally confirm their intention of maintaining free functioning of the gold standard at existing gold parities and within the frame—work of existing monetary laws.

July 5.—Mr. Roosevelt has made a last-minute effort to save the world Economic Conference.

It is understood that the United States President has cabled fresh instructions to the American delegation in London which is expected to prevent an adjournment of the Conference. Mr. Roosevelt's cable was received after 24 hours of hot discussion of the main proposal, that of recommending the calling of a plenary session of the Conference on Wednesday.

In the atmosphere of suspense that prevails at the Conference, it is heartening to note that a number of the sub-committees of the Conference are continuing their work. The silver Sub-Committee has decided to embark on private conversations in an effort to reach an agreement between producing countries and large holders of stocks.

An agreement involving a double control of exports and internal stocks in order to dispose of the existing and growing surpluses, has been reached between America, Argentina, Canada and Australia, the principal wheat-producing countries. It is also considered likely that an agreement on sugar restriction may be reached on the lines of the Cuban proposals. Both Britain and India, it is stated, are in favour of the scheme.

July 6.—The meeting of the Bureau of the World Economic Conference in which the fateful decision on the adjournment of the conference was to be taken took place this morning but it adjourned until 3-30 p.m. without reaching any decision. Sixteen countries are represented on the Bureau, including Britain, France, America, Italy, Germany and Japan. Strict secrecy was maintained about the proceedings of the conference, but it was stated after the adjournment that the Bureau had begun consideration of the Drafting (Steering) Committee's recommendations for the adjournment of the conference, which will be submitted to Mr. Mamsay MacDonaid in his capacity of Chairman.

Mr. Cordell Hull issued a statement containing the United States President's cable. The following are the chief points from the statement :—

The conference must seek to mitigate and remedy evils in present economic situation.

Revaluation of the dollar in terms of American commodities is the end from which the Government and the people of the United States cannot be diverted. The value of the dollar in terms of foreign currencies cannot be their immediate concern.

Exchange value of dollar depended on success of the countries in raising the prices of their own commodities in terms of their currencies.

The United States, like Britain, has to return to gold as an ultimate objective, but must choose its time and parity.

Apart from stabilisation, there were other great problems deserving explanation.

The first task was to restore prices to the level at which industry and agriculture could function properly and efficiently. This statement has been received with some relief and is considered more conciliatory by the gold *bloc.*

[For the developments of the Air Mail Week see "Overseas News."]

(Continued from page 3).

franc. In such an eventuality, France might seek the co-operation of Great Britain in protecting her currency. But it more than doubtful if the exchange Equalisation Fund would agree to be entangled in financial commitments on the Continent. Already, it is reported that the purchases of francs carried out by the Exchange Equalisation Fund have been mainly on account of the French Treasury or the Bank of France and that the control has kept its hand free of any serious liability on this account. Nervousness implied in this should increase when, as a result of the disappointment of the World Economic Conference, the raids on the franc should be renewed. There is, thus, at this stage no choosing, so far as sterling is concerned, between pegging to the dollar and pegging to the pound.

This situation has been keenly appreciated by the London financial press which urges that, both from the standpoint of stabilisation and from the stabilisation of the wider purpose of the World Economic Conference, it is better that the question of stabilisation is shelved for a time. The state of public opinion in America, no less than the determination of the Administration, shows that it is idle to expect President Roosevelt to give up his inflationary programme or the prospects of business improvement, which are dependent on them, for the sake of the more hearty co-operation of the gold standard countries and other nations in the tasks of the London Conference. It is, therefore, best that Mr. Roosevelt should go full steam ahead with his inflationary programme. It is difficult at this stage to arrive at any definite conclusions as to how far the present upward trend of American prices, based as it is on anticipations of a depreciated dollar, would lead on to a genuine recovery. In the case of sterling, the upward movement of prices consequent on the depreciation stopped almost as soon as it began. In America, owing to the coincidence of what may be called a "restocking," with an inflationary, boom, the movement is bound to last longer; and if a more fortunate coincidence should occur, President Roosevelt's inflation may ultimately get more credit than it deserves on its merits. But so far as the purpose of our discussions is concerned, it would make no difference whether the inflationary boom comes to a stop, as normally it should, or whether at a later stage it is propped up by a genuine recovery. What is important is that once the inflationary programme is tried out, whether with or without success, then the American Administration would be more willing than it has shown itself now to embark upon a programme of stabilisation and the other plans of the World Economic Conference to-day. It is, therefore, best in the interest of every party concerned, that the American inflation, which is inevitable now, should be proceeded with, without further delay, so that the day of stabilisation may not be postponed longer than it need be.

America's attitude on the question of the stablisation of currencies has been extremely provoking to France and other gold-standard countries, and should be eminently thought-provoking to off-gold countries like India. What America has done and is doing, India might have done and must do. In saying this, I have in mind the central fact that, potentially if not actually, India is very much like America. I have discussed, on earlier occasions, this study in comparison ; and I may repeat, in this context, what I have said before :

> India like the U. S. A. is richly endowed by a beneficent Providence in every manner and with the utmost abundance of raw materials and primary agricultural produce; Mother Earth is rich in minerals of every description. To win these minerals from the womb of the earth and to convert the raw products into manufactured goods, factories and workshops are necessary and abundant capital will be required. This country is not suffering from any paucity of capital, provided the psychology of the investing public is properly tackled. The experience of the boom period in 1919-20-21 affords final and conclusive testimony that the stream of domestic capital flowing towards industrial enterprise can be hydra-headed. The psychological factors to draw out the savings and hoardings of the masses in that period were apt and appropriate; and money was forthcoming in abundance and for any manner of industrial venture. That much of the capital so invested in industries was lost is an argument not altogether relevant to the present discussion. The point we seek to make out is that there was then no paucity of capital from domestic sources; and if efforts are made to inaugurate an industrial renaissance on sound, proper and healthy lines, the capital required for the purpose would be readily and adequately available. As for the building of the factories, plenty of land is available and the fullest conveniences in regard to their erection. Labour to work those factories is also available in any quantity. Power for those factories is to be had from hydro-electric sources in certain provinces and from coal in certain other provinces—power for the fullest requirements and at an economic price. All this is on the production side. On the consumption side, India, with a population aggregating one-fifth of the world's population, affords one of the largest markets at the very door of the indigenous industries. And, it may be added, China is next door; and if these two Eastern countries be taken together, there is a market composed of half the world's total population.
>
> In other words, we have all possible advantages on the production side—raw material, minerals, capital, conveniences for erection of factories, cheap power and abundant labour.
>
> In regard to consumption there is an unlimited market.

* * *

It seems to me that America, India and, possibly, China stand out, amongst the countries of the world, as those in which a large measure of self-sufficiency is attainable and which, once that self-sufficiency is attained, might witness so great an increase in national wealth and mass purchasing power as to cause a diversion of a portion of the increased consumer demand to the other trading nations. World depression can be cured not by restoration of pre-war standards of international trade, but by the materialisation of a new conception of world economy. Why are we—one and all in every clime—in this sorry plight? It is not the shrinkage of international trade, but the intensification of misfits and maladjustments that brought about the world crisis. The world, that we knew once upon a time and that a good few wish to see recreated, was one in which there were, on the one hand, ten nations extremely well off and, on the other, scores of others extremely bad off. The fortunate ones were satisfied that it was an ideal state of affairs. The unfortunate ones had to put up with their lot as there was hardly any mass awakening and as, otherwise too, they were helpless. The war changed the aspect of things. A new self-consciousness was aroused. The Lilliputians realised that they, too, counted in the scheme of the world. Nationalism of an aggressive kind came into vouge. Self-sufficiency was the goal towards which active steps were being taken on all hands. On the economic side, the manifestation of this nationalism was reduced demand for the goods of other nations and increased domestic supplies to meet domestic needs. Production was fostered by sundry methods, good, bad and indifferent. Tariffs, quotas, currency depreciation, exchange control—these are some of the results. The rich nations, that grew richer by selling to the poor nations, did not like the new order. They started the cry that these were impediments to international trade ; and, in the interests of world prosperity, they should be removed. To them, world economy meant international trade ; international trade meant sale of their manufactures to countries that should, to oblige them, remain forever undeveloped from an industrial point of view. These silly countries refuse to oblige them.

* * *

"We have obliged you long enough," they say. "It is time you oblige us by helping us grow in wealth and stature."

* * *

"But this kind of nationalism is selfish, suicidal", retort the old-rich nations. "This type of self-sufficiency is unnatural. You have no facilities. We have facilities. You have no capital. We have capital. You have no industrial plant, trained labour, selling organisation, banking and other amenities. We have all these. Why should you try to do things which are, in the nature of the case, extremely difficult. Why not we continue to look after your needs as in the old days. Let us have the pre-war balance between world nations".

* * *

All this wholesome advice is lost on the young upstarts. They are fired by the ambition to improve their own economy and place it on a sound basis, even if this effort should mean the impairment of the economy of the countries hitherto sound and stable.

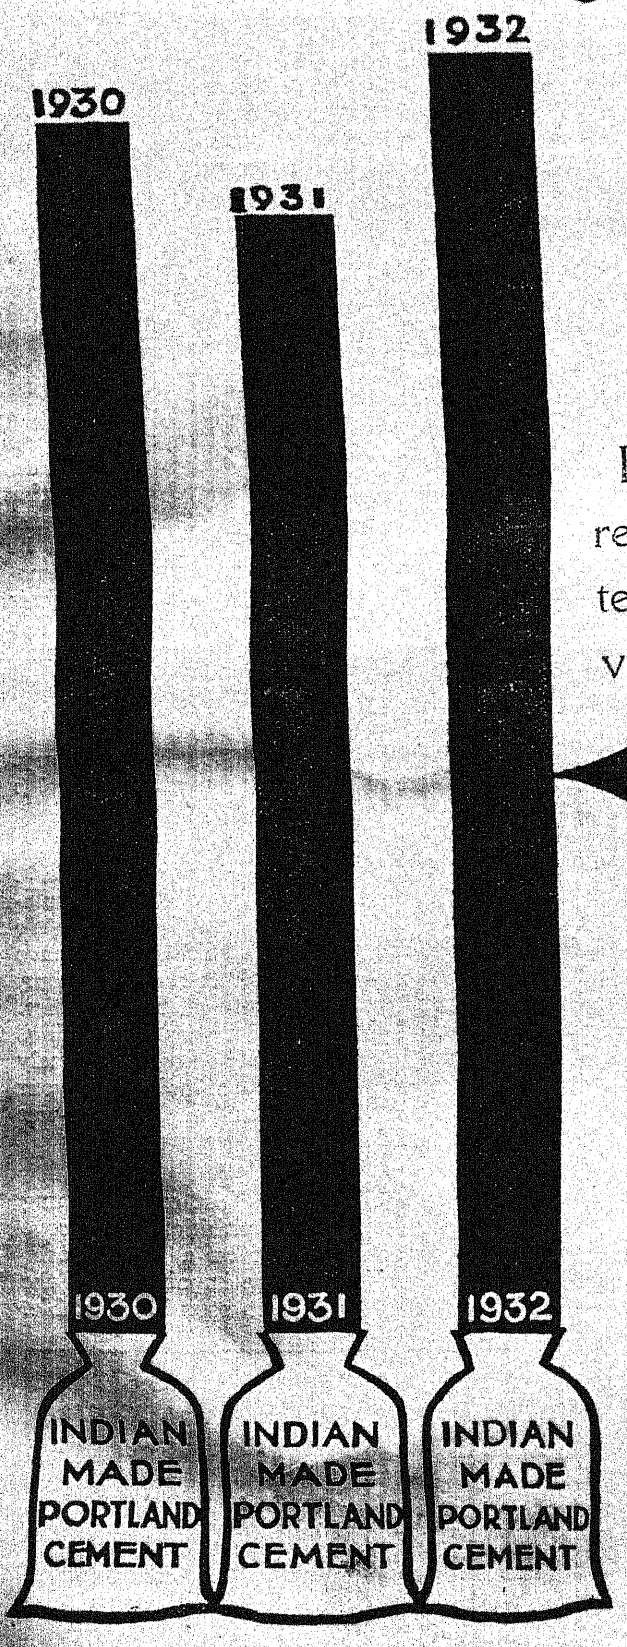
Clear Striking Proof!



In bad times items involving recurring expenditure in maintenance charges are subject to very severe scrutiny.

Look at this graph showing a comparison between the Cement Marketing Company's dispatches of Cement in the years 1930, 1931, 1932.

The first cost in a concrete structure is the last cost. With the dissemination of this knowledge, cement is being used in increasing quantities for the construction of buildings, roads, bridges, concrete products of all kinds, and also as cement mortar instead of lime mortar.

They are bent on putting forth their best in this direction if even the success of the experiment is doubtful. They cannot, and will not, reconcile themselves to the conception that the best scheme in this the best of all worlds, is for ten countries to be industrialy great and wealthy and for the rest to be industrially backward and economically impoverished.

* * *

Moreover, the strength of the chain lies in the strength of each link. And world economy can be said to rest on sure foundadtions only when each country, big or small, has a sound national economy. The World Economic Conference, now in session in London, is, from this point of view, a misnomer. It would have been truer to facts to call it the "International Trade Conference". The problem as visualised by the Big Powers is this: How are we to persuade the smaller nations to do away with all the barriers, direct and indirect, tangible and intangible, which they have erected so as to foster national self-sufficiency and to restart buying our goods as of old. The delegates assembled in London will talk round and round; but no concrete results will ensue. The weaker units do insist on aspiring for a place in the Sun.

* * *

If the world economists and statesmen had understood their task aright and appreciated the psychological factors in the situation, they would have put, in the forefront of the agenda, the main question: What are the steps to be taken so as to end the state of affairs in which ten countries were rich and grew richer and ninety others were poor and grew poorer? What help are the ten Powers to render to the ninety smaller Powers so as to ensure a world chain of which each link is strong? As it is, the conference seeks to recreate conditions in which the erstwhile prosperous nations are, instead of helping their weaker brethren, to receive help from the latter by being, once again, permitted to exploit them. Internationalism, free trade, lower tariffs—these are the pompous declarations of nations with a high level of national economy. It is clear as crystal that sound and healthy nationalism should be the basis of enlightened internationalism; and that rehabilitation of the domestic economy of each unit is the preliminary to the rehabilitation of world economy. If the Bigger Powers would help the Smaller Powers in this process of rehabilitation; and if the London Conference understands its aim and purpose to be such, well and good. But there are no grounds to believe that mutual help, and not mutual exploitation, is the goal of the bargainers gathered in London. If the fortunate ones will not help the unfortunate ones, the latter will have to help themselves. Self-reliance, self-help and self-confidence, these three alone lead to sovereign power. In this analysis, the emphasis is not on expansion of trade as between one nation and another, but on the acquisition of a due and proper economic standard and stature by each nation. Let each look after itself; the world will not need much looking after. Self-confidence and self-reliance need not be laughed out of court as a selfish type of insularity. This is the point of view taken by America in to-day's conditions of her internal, as well as world, economy.

* * *

The question, which President Roosevelt should have asked himself, is somewhat as follows: Which should be my first objective—the revaluation of the dollar in terms of American commodities or the revaluation of the dollar in terms of foreign currencies? Ameria has suffered seriously from the *debacle* in prices. So long as prices are at or near present levels, America's economy could never improve. The first task is, therefore, to restore dollar prices to the level at which industry and agriculture can function profitably and efficiently. Once U.S.A. has strengthened her financial and economic position, she could make a more useful and more direct contribution to world problems. In the days of Benjamin Strong, America was extremely prosperous; she was, therefore, able to take a leading part in proffering substantial help to such countries as were endeavouring to re-establish their war-wrecked currencies on a gold basis. By her example in the past, America has shown that so long as she has no domestic problems of an acute kind, she would, freely and generously, contribute all she can towards the strengthening of the weak units in world economy. If America is once again to play a like part, it is of paramount importance that she should set her own house in tip-top order. It is for this reason that President Roosevelt has categorically stated that the revaluation of the dollar in terms of American commodities is the thing from which the Government and the people of the United States cannot be diverted. It is for this reason that the external value of the dollar ceases to be their immediate concecrn.

* * *

If, from the experience of the pre-slump days, it is possible to derive hope that, in suitable conditions, America would offer fruitful co-operation in the interest of world economy, the events of the last two months are equally re-assuring. Whatever the world problems might be, whatever remedial measures might be deemed necessary by other nations, President Roosevelt is convinced that the main domestic problem for him is a substantial rise in dollar prices. This is the one objective towards which all energies and all endeavours will be directed. There has not been any difference of opinion that the insistence of America on the raising of prices is quite a proper and legitimate objective. The world over, the cry is for higher prices. While this is common on all hands, no one nation has taken comprehensive or hundred per cent. effective steps for the levering up of prices. After Britain went off the gold standard, there was some rise in sterling prices. In the sterling group of countries, there was a similar appreciation in prices. But this recovery proved shortlived. All the gains won have been lost in the subsequent period. The index of wholesale prices to-day is really a good few points lower than in August, 1931. In India, after a slight upward trend roundabout the close of 1931, the tendency has been steadily and even rapidly downward. Our index of prices is actually over twenty points down as compared with twenty months ago. In other words, depreciation of currency could not be used by Britain or her friends in the sterling group for any striking effect on the level of prices.

* * *

There is another important consideration. Even during the period when sterling prices did show a rise, they did not have any favourable repercussions on world prices, that is, gold prices. Actually, gold prices were adversely affected. What has happened in the past few weeks in America is exactly the opposite. By the drastic steps taken by the New Administration, dollar prices have gone up by leaps and bounds. These have exercised no unfavourable effect on prices in other countries. On the other hand, there are abundant indications that the repercussions of higher dollar prices would be quite beneficial on world prices. In other words, America has not only succeeded in utilising depreciated currency

103, Clive Street, Calcutta.

for the raising of internal prices, but has thereby profoundly affected world conditions for the better. It seems to me that owing to the peculiar economic structure of the United Kingdom, she does not possess the power to affect world prices through her special efforts. American economic structure is, however, such as to result in improving dollar prices having a sympathetic, if not fully corresponding, effect on world prices. From this point of view, the developments that are now taking place on the other side of the Atlantic are of importance not only to the United States but to the world at large. The gold *bloc* countries are wrong in insisting that the stabilisation of the dollar should be the first decision taken at the world economic conference and that, failing an agreed formula on this matter, there can be no use in proceeding with other questions. Some of the gold *bloc* countries did themselves depreciate their currencies in the last decade. Belgium, France and Italy watered their currencies appreciably. America did not grumble. America did not upbraid them as selfish nations seeking to take undue advantage through currency depreciation. There was no plan or method in the process of depreciation that took place in France and other countries. On the other hand, in the present experiment of dollar depreciation, there is deliberate purpose and a definite plan. That purpose and that plan are in perfect accordance with world purpose and plans for economic rehabilitation. Why should America be hustled to adopt a course of action, the main purpose of which is the mere satisfaction of the whims of the gold countries?

* * *

If India has, at the present moment, a kind of President Roosevelt as the wielder of power in financial matters, he would have no hesitation in throwing the eighteen-pence ratio into the scrap heap. India, too, could and should pursue appreciation of prices as the only correct objective. In the sterling group itself, there has been no uniform procedure among the various units as regards the percentage of currency depreciation. It could not be said that there has been a link with sterling in the sense and to the extent that the respective national currencies in the Empire have depreciated only correspondingly with sterling. On the contrary, Australia and New Zealand, in addition to the depreciation experienced in common with sterling, has caused further depreciation of their currencies by 25 per cent. If Australia and New Zealand could have belonged to the sterling group and yet been allowed to depreciate their currencies to a far greater extent than sterling, why should India alone be tied irrevocably to the apron strings of sterling? If one thinks over this matter carefully there is a special reason why India should be given even greater freedom than Australia and New Zealand. While England was content, on the re-establishment of the gold standard in 1925, to adopt the pre-war parity, India was asked to accept for her currency an external valuation 12½ per cent. higher than in the pre-war days. So far as I am aware, in the currency history of the world, there has not been a single instance of such over-appreciation of currency for arbitrary reasons.

* * *

Of the countries that re-linked their currencies to gold in the last decade, a good many adopted a lower parity; a few reverted to pre-war parity; it was only India that had to accept a parity 12½ per cent. higher. It is now recognised on all hands that, especially in the case of countries which reverted to pre-war parities, stabilisation on such a level was a disastrous step. This resulted in considerable deflation, tightness of money and fall in prices. If it is agreed—no one disputes that fact now—that Britain committed a folly in stabilising her currency in 1925 at pre-war parity, the folly of thrusting on India a higher parity than pre-war level is a hundred-fold more grave. When Australia and New Zealand were allowed—rather, when they on their own initiative took definite measures—to depreciate their currencies to a far greater extent than sterling was depreciated, India should, in all justice and fairness and especially by way of amends for the past injury, have been permitted a free hand in the matter of the choice of the ratio.

* * *

At the time when England went off the gold standard and it was decided that the rupee was to be linked to sterling, *Indian Finance* supported the linking of the rupee to sterling. Its support was not to the particular ratio but to the need for stabilisation. *Indian Finance* would have been happy if that opportunity had been availed of for lowering the ratio and stabilising it at the lower level. But the alternatives in the discussions at that time were either the stabilisation at 1s. 6d., by linking with sterling or an exchange left to itself and liable to wild fluctuations at the behest of gamblers. We were against a fluctuating exchange. We continue to be opposed to a fluctuating exchange. But we do think that the time has arrived when India must claim the freedom to abandon the present ratio, choose a lower ratio and effect stabilisation at the lower level. Judged from whatever criterion, the present ratio of eighteen-pence sterling is untenable. It has been maintained and sustained on the artificial prop of gold exports. That India exported nearly Rs. 150 crores of gold since September, 1931; and that, without this adventitious aid, 'eighteenpence' would have been smashed to pieces, is clear indication that the present valuation of our currency for external purposes is unnatural and out of tune with our position on foreign merchandise account. That prices in India have fallen by three times as many points as has been the case in Britain is another proof that the present ratio does not suit internal conditions.

* * *

Our principal competitor to-day is Japan. She has depreciated her currency far more than the depreciation vouchsafed to us by the movements of sterling. She has a tremendous pull over us in every sphere of trade. She has been able to bring about an increase of prices by nearly fifteen points through the devaluation of the yen. While her tactics are aggressive and suited to her national conditions, is India alone to be tied hand and foot, unable to help herself, and destined to be routed? Howsoever we view this matter, whether from the standpoint of our foreign trade or internal prices or our helplessness against our competitors or the example of Australia or the havoc caused by wanton interference with our ratio on the two occasions when two shillings and eighteenpence were forced on us—it is time that we tell the authorities clearly and emphatically: There is nothing sacrosanct about the ratio. What has happened to your ratio? If Britain, the premier nation in international finance, could hold her position despite currency depreciation, and if Britishers are convinced that there is nothing wicked or improper in currency depreciation, why should an unnecessarily puritan standard be imposed on India? Britain has freedom to do what she likes with the exchange value of sterling. We want the same freedom to do what we like with the external value of the rupee. You have been denying us this freedom for all this time. You have caused us grave injury thereby. You must yourself admit that all the experiments of the higher ratio have been disasters and follies. In the changed conditions when the favourable balance on merchandise account has sunk to the lowest level, there is all the greater need for a lower ratio. Let us have the freedom for which we have been clamouring. Let us use it for raising our prices, for expanding our currency, and for otherwise imparting a healthy tone to the trade and money markets. If India improves her internal economy by this means—and this is one of the surest we do not know of another—if will be to our own good.

(Continued on Page 21)

SIR LALUBHAI SAMALDAS

REMNANT OE AN OLD GENERATION

Of the Bombay which I knew, wherein I strutted an inconspicuous part of the stage, and that I ever love to recall to my mind, Sir Lalubhai Samaldas is the sole surviving remnant. In every way, and in an emphatic sense, Lalu Kaka—as he is affectionately described—belongs to the generation that has disappeared ; amongst members of the present generation, he appears like one disembodied from his fellows and kindred spirits.

In his day, he was everywhere respected ; to-day, he is tolerated by everyone. In this simple sentence, you have a complete version of the change that has come over Bombay.

In the Western Capital of the second and third decades of this century, the Captains of industry were the men that counted. In this fourth decade, Money Bags would seem to be the domineering personality. Business Magnates—Merchant Princes —phrases like these had aptest and fullest significance in the good old days ; such phrases are farces to-day. Nobody would refer to the tallest contemporaries in business except as leaders of the commercial community.

Captains and magnates and princes have yielded place to leaders—and lenders. The Patricians have gone down before the Philistines.

Mathradas Goculdas, as generous of heart and noble in bearing as keen of understanding, paid out cheerfully, in sheer sport, a matter of two crores on the Bombay Stock Exchange. Another sportsman, Sir Fazulbhai Currimbhoy, came to his friend's help by signing a cheque of fifty lakhs after a five minutes' negotiation ; and when Sir Fazulbhai learnt that the "damages" he was in for were far heavier, he accepted the situation with noteworthy graciousness.

Omar Sobhani made seventy lakhs in one week and lost a crore and a half the next ; and Osman, innocent as a babe, never hesitated for a moment to take on so heavy a liability with, and on behalf of, his brother.

When J. N. Tata died, a crore was earmarked for charity, of which the Science College of Bangalore is the most farseeing and graceful contribution. Sir Ratan Tata left a huge fortune for the public cause. Sir Dorab Tata improved upon the family tradition and left his property to the last penny for the use and benefit of humanity at large. Such was Bombay.

And more. Has ever Finance stood by Industry with more becoming modesty or in more fruitful association than did Sir Shapurji Broacha stand by the Tatas and Currimbhoys? Could shrewdness of business mingle with courtliness of manner more harmoniously than in Narottam Moraraji? Could one meet more arresting versatility than that of Rahimtulla Currimbhoy (Rehmu, whose premature death spread gloom over all Bombay) or of Sir Vithaldas Thackersey?

Of such a Bombay, Sir Lalubhai Samaldas is a wistful reminder. Whenever I meet him, he occasions in me hushed reminiscences. I cannot help recalling the old picture and comparing it with the new.

To-day's owners of pelf and wielders of power are, excuse my saying so, like unto upstarts. They are garish. They lack poise. They have no "sweetness and light." They inspire fear, not awe. You honour them not because you would, but because you must.

Mathradas Goculdas, who sold all to keep his word and save the crowd of brokers, is to-day a salaried servant in the mill run by a financier. Sir Fazulbhai Currimbhoy, who succoured a friend with fifty lakhs, has to humour Shylocks for a tenth of fifty lakhs. Osman, who flung a fortune for a brother's honour, gets barely enough to maintain a flat with as many rooms as there were bathrooms in his father's bungalow.

Industrialists, who patronised the financiers, are now bossed by the financiers. But for a perennial youngness of mind and but for a supreme philosophy, Sir Lalubhai should be, in the changed environment, like a bell jangled out of tune.

Loving and lovable ; most Catholic in his outlook ; open to, and eager for, fresh ideas ; intensely warm-hearted ; keenly interested in everything and everybody, Sir Lalubhai is equipped with that temper and temperament which, while inducing the mellowness of age, has yet the vitality of youth. He is, therefore, part and parcel of all that is vivid and wholesome and heartening in life.

He is as at home with perky juveniles as he should have been round the Board Table with many of his departed colleagues.

He can talk away for hours with politicians ; and he can clinch matters with fellow-businessmen in a trice. He is friendly with officials in Olympus, great and small ; in the Congress camp, too, he is not an infrequent visitor.

With his colleagues he is all decorum and dignity. With his sons and their young friends, who are also his pals, he is all vivacity, a good talker and a better

CALCUTTA,
The 30th June, 1933.

listener. He is the youngest old man I have so far come across—who intensely enjoys sauciness while he pretends to chide it.

"Have you a sense of humour?"—Mahatma Gandhi was once asked.

The Mahatma's answer was characteristic: "But for a sense of humour, I should have committed suicide."

Sir Lalubhai's sense of humour has, likewise, stood him in good stead. He is as tickled by a joke as his impish son, G.L.M. Does Gagan owe to the father his genius for facetious writing? Or has the son fostered in the parent the appreciation of the clown's art?

Be this as it may, Sir Lalubhai is the one great and big and grey-haired man in whose presence a touch of humour createth a kinship between Age and Youth, making each give of its best in sprightly and edifying talk.

It is this quality which fits him eminently for the *role* of mediator or negotiator. He is ever a unifying influence. Where frictions abound, Sir Lalubhai smoothens matters with a *naivete* all his own. Where a bridge is to be erected over the gulf that yawns between Industry and Finance, Sir Lalubhai is the bridge. Where Capital and Labour are at loggerheads, Sir Lalubhai is the handy peacemaker. Where shareholdders are rowdy, and bandy words with managing agents, Sir Lalubhai makes each meet the other half-way.

He has been connected with all manner of business enterprise—industrial ventures, public utilities, banks, insurance concerns, shipping companies, land development schemes, scientific research propositions, and what not. In all these contacts, his main function has been to be the corrective and antidote to the whimsicalities and angularities of everyone of those associated with him.

In all his relationships, Sir Lalubhai, as by an instinct, has been a soothing, refining, cementing and gracious influence. May he be given many more years of life and vitality that we may have more and more of this uplifting influence in the difficult days, present and prospective!

Steel Enquiry Speculations: Mr. N. R. Sarker —a likely member: Will prove popular choice: Prof. Joshi's Death: Gold exports: That Silver Deal:

(From Our own Correspondent)

Bombay, July 5.

There has been considerable speculation in market circles as to the what and when of the impending statutory enquiry by the Tariff Board into the case for protection of the Steel Industry. It is felt that an announcement in this connection is overdue. What is causing the delay?

The personnel of the Board has to be announced; the enquiry has to proceed through all the varied stages; evidence will have to be gathered and witnesses examined; and the Board will require time to draft the report. All these have to be got through with a good measure of hustle as the report should be ready by the end of the year, in time to allow the Government to make up their minds and draft the necessary bill for presentation in the Spring session of the Central Legislature.

It is evident that Sir Joseph Bhore is much exercised over the composition of the Board for this enquiry. As Sir Ibrahim Rahimtullah is a shareholder of the Tata Iron and Steel Company and has also been Director, his son, Mr. Fazal Rahimtullah, would not like to be associated with an investigation of the case for the steel industry. Equally is it difficult to secure another disinterested person on this side. The choice would, therefore, be from amongst competent public men at your end.

The name of Mr. Nalini Ranjen Sarker is being freely mentioned in this connection. Mr. Sarker has been, for three years, the President of the Bengal National Chamber of Commerce, the premier commercial body of your centre. He is the President for this year of the Federation of the Indian Chambers of Commerce. He has been associated with important enquiries like the Central Banking Enquiry Committee and the Railway Retrenchment Sub-Committee. He has, therefore, both the necessary status and experience. He has the additional advantage of having had no connection whatsoever with any manner of business in Bombay. There is, thus, every reason to feel that if the rumours in this behalf turn out to be true, the choice will be welcomed in all quarters.

There are special reasons why a correct choice should be made on the present occasion. There have been quite a number of enquiries into the merits of the steel industry for protection. Every Tariff Board report on this question has strongly endorsed the plea of the Tatas for protection of an industry which is admittedly a key industry. Nevertheless, this constant appearance of the Tata Steel Company before the Tariff Board has tended to produce the impression in the public mind that while protection has been given to them as and when they want, they have been only asking for more and more. It would, therefore, be critically examined in all public discussions on this question how far the Tatas have made use of the protection that has hitherto been accorded to them; whether they have deserved all that they have been given; whether, in national interests, it has been fully worth the while; whether on an appreciation of the past experience, it might be necessary to stipulate any new conditions so as to ensure the maximum of benefit alike to the industry and to the country. The question of protection to steel has ceased to be an issue as between the Government and the Tatas. It is an issue in which public interest has been roused in a considerable measure. On the present occasion, the Tatas will not only have to make a case for continued protection but will have to prove conclusively that whatever was done so far was fully justified.

From this point of view, the Tatas are in for a pretty severe scrutiny. Besides, many hostile forces have been at work in the meantime. Our Anglo-Indian friends, on the plea of free trade, have done all that they could to fling mud at the Tatas. Some of the papers of Calcutta have missed no occasion when they could say anything nasty about the management or other detail of the steel industry. All these comments have certainly produced a cumulative effect of prejudice. The case that the Tatas have to put forward should be such as to prove that the prejudices are unfounded and worked up by persons inimical to the interests of India. In an enquiry in which issues of this kind will have to be examined, it is appropriate that an impartial and trusted businessman like Mr. Nalini Ranjen Sarker is selected as one of the members.

The only question is whether Mr. Sarker would care to accept the invitation if it is extended to him. It is in the fitness of things that in an important enquiry of this kind, the President of the Federation should offer his co-operation. But if Mr. Sarker were asked to join the Tariff Board for a longer period than what would be taken up for the specific enquiry on steel, he would not be willing to exchange his present comfortable position in his own insurance company for a salaried appointment under the Government. If, therefore, it is made clear to him that his services are being requisitioned only because of the momentous nature of the steel enquiry, he will have, one may be sure, enough sense of public duty to say "yes."

In the death of Mr. R. M. Joshi, Professor of Economics, Sydenham College of Commerce and Economics, India has lost a scholar of great erudition and sound judgment. He had a lucid style of writing while discussing even the most abtruse questions. This quality stands out pre-eminently in such publications of his like *The Indian Export Trade* and *An Outline of Economics and Theory*. Even by Indian standards, Mr. Joshi was a young man. He was only 45 years.

Sir Frank Noyce spent a most useful week in Poona, Bombay and Ahmedabad. He has an affability all his own. He came into touch with all the interests of this presidency with which his department has any concern. He met labour leaders, mill owners, industrialists and members of the Bombay Government. He had a full and frank exchange of

OLYMPUS

(From Our Own Correspondent).

Simla looks to Poona: Poona looks to Mussoorie And Mussoorie won't give a hint: Speculations on Poona Conference of July 12: Non-officials also invited for Sugar Conference: Hop from Karachi to Calcutta:

Simla, July 5.

What will the Congress Leaders' Conference at Poona on the 12th instant do? Will it lead to a permanent suspension of the civil disobedience movement or a further extension of the truce for a limited period pending the release of Pundit Jawahar Lal and Mr. Vallabhai Patel and other leading members of the working committee of the Congress?

* * *

These questions are on everybody's lips to-day on the publication of the report from Poona about the forthcoming conference. The organisers have cleverly got over the legal difficulty by describing it as an informal conference and that its decisions will not be in the form of resolutions but merely as indications to Mahatma Gandhi and Mr. Aney, the Acting Congress President.

* * *

Except for the absence of a very few of the "tall popies" of the congress organisation, it will be, in essence, a full session of the all-India Congress Committee. But what will the conference do? The Simla Gods are scanning the list of those who will attend. The majority of them are being described as pro-changers. At the same time, the views of Pundit Jawahar Lal and Mr. Vallabhai are the speculative factors, particularly those of the former.

* * *

The interview, which Pundia Malavya had with Pundit Jawahar Lal in the Mussoorie jail, is no doubt kept secret. But well-informed circles here believe that the old Pundit was told by the Young Nehru that he would not give out his opinion until and unless he comes out of jail and has surveyed the situation through discussions with his trusted friends.

* * *

At the same time, the fact that Pundit Malavya, despite his ill-health, has agreed, after his visit to Mr. Jawahar, to attend the Conference in Poona is taken as indicative of his possessing a not helpless message from Mussoorie in favour of a further suspension—though on certain conditions. These conditions may come to be known at the Conference itself. As for the Government of India, they are positively upset by the announcement of the forthcoming conference, as they are becoming more and more convinced that it will only result in indefinite suspension of the civil disobedience movement whereas what they desire is definite abandonment of it or even definite resumption.

* * *

Excepting Assam, Central Provinces and one or two other provinces, official representatives from all other provinces are expected to attend the conference which will be held in Simla commencing on the 10th instant on the future development of sugar industry. The United Provinces is chiefly interested in sugar manufacture; and so, from there, as from other provinces similiarly interested, there will be unofficial representatives as well. I learn Mr. Lowney and Mr. Padam Pat of Cawnpore will be included.

* * *

An attempt will be made by the Government to see that the profits accruing from the expansion of sugar industry within the protective walls are not monopolised by Indian industrialists but shared by others. How or in what manner this will be effected remains to be seen. The interests of the sugarcane grower are, therefore, to be kept in view and schemes of zoning and other measures are to be thrashed out. Legislation is anticipated as a result of the conference deliberations.

* * *

The committee appointed under the chairmanship of Mr. J. A. Hubback, I.C.S. to enquire into the administrative problems connected with the formation of a separate province for the Oriyas had led to enquiries from Sind. The Anglo-Indian press has, therefore, objected to the delay in ordering a similar enquiry for Sind. The position is that there has been no intentional delay in the matter but some delay necessarily occurs in selecting the *personnel*. Moreover, the case of Sind is not so smooth as that of Orissa; and it may take even some weeks before the committee is announced.

* * *

Both Sir Frank Noyce and his Secretary, Mr. Shillidy, will go down to Delhi and be present at the aerodrome to watch the arrival of the first Atlanta machine from Karachi on her maiden voyage to Calcutta in connection with the inauguration of the Indian Trans-continental Airways on the 7th instant. They will have to satisfy themselves that the arrangements are such as can be satisfactorily worked out in order to ensure success to the scheme of the Imperial Airways as otherwise it will mean a great blow to British prestige!

"HILLBIRD."

THE EDITOR,
Indian Finance.

SIR,

With reference to the prospectus of the Hospet Sugar Mills published in your issue of the 30th ultimo, may I be permitted to point out that under Article 85 of the Company's Articles of Association, the right of voting upon a poll is confined to ordinary shareholders only. This means that upon a poll, holders of preference shares have no right to vote. The statement in the Prospectus that the right of voting at general meetings is one vote for every share does not, therefore, appear to be quite correct. If I am right, it will be seen that the fact about the preference shares not possessing the right to vote upon a poll should have been expressly stated as laid down by Sub-Section (*o*) to Section 93(1) of the Indian Companies Act; and this, I submit, is a serious irregularity.

I also find that the usual provision empowering the shareholders to obtain inspection of the Company's books by passing an ordinary resolution has not been incorporated in the Company's Articles of Association. This is a serious omission and is calculated to deprive the shareholders of their usual right to demand inspection by an ordinary resolution. The provision in question is generally incorporated in the Articles of Association of joint stock companies on the lines of Clause 105 in Table A to the Indian Companies Act.

The result will be that it will not be competent to the shareholders to demand inspection of the Company's books against the wish of Directors unless they proceed for the appointment of a Committee under Section 142 of the Companies Act. This Section, however, requires a special resolution which means that the resolution must be passed, in the first instance, by a three-fourths majority, which, as you are aware, is very difficult to obtain.

I am pointing this out in order to show that on an important matter like the taking of inspection, the rights of the investing public have not been as adequately preserved by the Company's constitution as they should have been.

Yours, etc.,
J. J. KAPADIA.

GREAT BRITAIN

DIFFICULTIES OF THE WORLD CONFERENCE

By the time this appears in print, the World Economic Conference may well have gone to swell the number of international futilities. The developments of the week have been so depressed and so dis-heartened that the very fate of the Conference is in doubt. The initial efforts, however, were made with apparent hopefulness, though neither the beginnings nor the prospects, as they then stood, were calculated to sustain faith in ultimate success. Despite every preliminary effort, much time was lost in the stage of general statement and counter-statement, which could do little to bridge the differences, which was after all the practical task of the Conference. So much so, the *Economist* is led to observe that "the proceedings of the Geological Museum this week conveys something of the uncomfortable impression which is created at an operatic performance when there is a hitch in the raising of the curtain and the conductor has to repeat, in a grimly persistent *da capo,* the concluding passage of the overture."

Committees and Sub-Committees.

The first step is marked by the announcement of Mr. MacDonald of the appointment of two commissions, one in charge of monetary questions and the other to enquire into the economic problems. The Economic Commission divided its agenda into four principal heads, (1) commercial policy, (2) indirect protection through subsidies and other administrative measures, (3) control of production and (4) public works. The Monetary Commission recognised the natural distinction between the measures of reconstruction, which are immediately necessary, and the measures necessary for the re-establishment on a permanent basis of an international monetary standard. The distinctions made above only follow the major differences of opinion in regard to the causes of the world depression. And it is natural, therefore, that when the committees and sub-committees began to tackle these problems, the same differences of opinion, reinforced to no small degree by nationalist prejudices, should make themselves heard and felt in the discussions. The one concrete proposal before the Monetary Sum-Commission was that of Senator Pitman regarding the re-establishment of gold as the international standard and the acceptance of a 25 per cent. metallic cover for currencies. To this was added the British insistence of leaving the time and condition of return to the gold standard to the discretion of each country, a qualification which, in practice, negatived the standpoint of the small group of gold standard countries. The doings of the Silver Committee and the committee regarding central banks have been recounted at length in *Indian Finance* on previous occasions and need no lengthy reference here. But special reference must, however, be made to Mr. Chamberlain's draft resolution which recommended the pursuit by central banks of a policy of cheap and plentiful money, with a view to the recovery of prices and the re-establishment of the equilibrium between costs of production and prices. This resolution which only enjoyed the support of the Dominions was, however, the principal medium, through which the rival viewpoints aired their conspicuous differences. The detraction of artificial raising of prices and the insistence on the restoration of confidence as the proper approach to the problem of recovery have by now become the familiar cloak of diehard deflationism. The statement of the American delegation that interference with the upward trend of American prices would harm the Conference more than the lapse of an immediate agreement for temporary stabilisation only serve to deepen the contrast between the mild inflationist tendencies of Mr. Chamberlain and the British Government on the one hand, and the deflationist attitude of the gold standard countries.

Economic Problems offer no escape.

The same fundamental cleavage was also noticeable in the deliberations of the Economic Commission. And this is all the more sad, in as much as the Conference itself turned to the economic questions more or less as an escape from the insoluble riddles of the monetary sphere. France has stood all along for the co-ordination of production of marketing through a readjustment of quotas and import tariffs in the interest of a greater expansion and stability of international trade. In fact, it has been authoritatively reported in many quarters that France came prepared to surrender some of her quota restrictions in return for the concession of the American and the British standpoints in regard to the stabilisation of currency and exchange. But in the sphere of economic policy and in the sphere of monetary policy the British standpoint has been at marked variance with the standpoints of other countries. It fell to Mr. Runciman to expound the views of the British Government ; and as may be expected, he urged that the multilateral agreements on tariffs might have the effect of putting too severe disabilities on the countries with low tariffs, and that in most cases bilateral negotiations might avoid these depressions and yet show demonstrable success in the common object of the World Economic Conference, namely, the lowering of tariff barriers. The question of the most favoured nation clause has always had its peculiar difficulties for the British Government and the impression was created that in this matter Britain would expect special favourable treatment for herself.

Producers' Agreements.

Thus the middle of the week found the Conference being driven gradually to the position that neither monetary nor economic agreements could be arrived at among the nations concerned, and that the better, more effective and more practicable solution lay in the bringing about producers' agreements. Wheat has justly been in the forefront of these discussions. But the sub-committee, which is handling the general question of agreements and which is representative of both consumers and producers, has drawn a long list of products representing a wide variety of products: Coal, Wheat, Coffee, dairy produce, cotton, wine, timber and steel. The proceedings started with a speech from Sir Phillip Cunliffe Leicester on the general principles which should underlie any such producers' agreements. But they were of little use in solving the marked conflict of interest. While the bigger producers of wheat like Argentina, Australia, Canada and the U.S.A. were, generally speaking, in favour of a reduction of acreage in order to facilitate the disposal of accumulated stocks, the European import countries have not shown themselves as ready to modify their present policies framed with a view to make such countries self-sufficient in respect of their requirements of wheat. Last in the list of futile discussions came the question of shipping subsidies and import prohibitions of quotas and the British Government again tabled a motion which was more a defence of its recent actions than a helpful suggestion for the benefit of the conference. While there is no gainsaying the fact that producers' agreements are more practicable than the general move for lowering tariff barriers or the stabilisation of the exchanges, it is

Air Mail Week.

obvious that the reduction of production is not the safest way to the revival of prosperity.

Departure of American Bankers.

If the discussions and negotiations have been disheartening, the politics at the Conference is even more depressing. The week opened with the announcement that Mr. Harrison, Governor of the Federal Reserve Bank of New York and Mr. Crane, Deputy Governor, who represented the United States in the Central Bank's Conference, which was running parallel with the World Economic Conference, left on Sunday for New York. Though the departure was according to plans originally made, the departure of the American Central Bank officials is regarded as an advertisement of the failure of the bankers' conference on which the fate of the World Economic Conference hung. The statement of the American delegates which was made towards the end of the week, though emphasising the view that the measures of temporary stabilisation would be untimely, also gave hope that America had pledged herself, though implicitly, to stabilisation at a later stage. But this can affect little the fortunes of the present conference.

Mr. Hull's Motion Repudiated.

Another setback in the prospects of the Conference which occurred early in the week was Senator Pittman's announcement that the motion proposed by Mr. Cordell Hull in favour of a ten per cent. horizontal cut in import tariffs has not the support of the American administration behind it. They were thus reduced to the status of mere suggestions by the American technical experts which the American delegation submitted to the Conference for the benefit of their views.

The recovery of the Conference from the blow dealt by President Roosevelt has been neither marked nor easy. Suggestions of an adjournment of the Conference till the time the inflationary policy of the American Government is carried out or America realises its usefulness have been freely made by the representatives of the gold standard countries. But fear in this score at this stage of the Conference, at any rate ,is not well-founded. For, the advocates of adjournment are obviously counting without Mr. Ramsay MacDonald who may be expected to put his whole weight on the side of preservation of the Conference. But considering the manner in which the discussions have proceeded and the failure to thaw the frozen prejudices of the nations of meeting in Conference, it is difficult to see what course of action will be of practical benefit to world ecocnomy. In such circumstances, people are necessarily asking themselves whether the wiser, though also the inevitable, course would not be to take up the threads of the present enquiry after America has reached the end of her present inflationary policy. Such an end would be reached in one of two contingencies. Either the policy is a success by which is meant that the required level of prices is reached and is maintained by a genuine recovery or the aftermath of inflationary intoxication as it is, with its curious disillusionment of the value of narcotic stimulants. In either case, once the Administration feels that nothing more is to be done by way of pursuing an inflationary policy, America should evince a more helpful attitude towards the World Economic Conference and the present idea of progress along stabilisation of currency, reduction of import tariffs and quotas and co-ordination of production and markets could more easily materialise. In discussing the prospects of either contingency, the *Financial News* observes, in its issue of June 21, that it would not at all be safe to assume that further depreciation of the doller or the expectation of it will exercise the same effect on prices as it has hitherto. What has actually happened is that the dollar has depreciated in relation to sterling since the imposition of the embargo by about 18 per cent. as against the 22 per cent. which is the rise necessary for dollar prices to maintain their *status quo*. The prices of home produced commodities, and commodities with a primarily domestic market have, therefore, risen appreciably more than the amount of the depreciation of the exchange, and the principal commodities imported from sterling and gold areas by very much more. Copper, an isolated domestic market now, has risen heavily. Evidently, the depreciation of the dollar has not exercised a deflationary influence on prices outside America ; the increase in American demand has outweighed everything. However, "it must be remembered that every known price index for any leading ccountry shows a rise over this period —the *Economist* index for this country shows a rise of about 7 per cent. for the complete index and of about 12 per cent. for primary products. A part at least of the rise in prices has nothing to do with the dollar exchange, but is the result of the real improvement in business and the check on commodity stocks which have been going on since last autumn. And the improvement in the physical volume of business has been greater, according to the available statistics, in Europe than in America." . . . . It would seem, thus, that further dollar depreciation may expand American demand just as much as it has hitherto. But on the other hand, it is reliably reported that ultimate consumer demand has picked up only very moderately—much the same as it has hitherto. . . Reports of the actual state of affairs in America would lead us to suppose that on the short view prices can rise in this way for some time yet. On a longer view, the process, if nothing very new develops, may be exhausted, as it was almost, at one time, with sterling ; but it will be clear enough when that begins to happen."

UNITED STATES OF AMERICA

Last week ended with the attempt to salvage the price boom from the wreck with which it was threatened by the rumours regarding the stabilisation of the exchange. Though on Friday last, the volume of trading and the level of prices recovered

from the slough into which they had fallen on Thursday, Saturday saw no perceptible improvement. The turnover totalled 1,570,000 shares, being the smallest for any Saturday since the middle of April and comparing with 2,790,000 shares on the previous Saturday. Even the grain market failed to respond to the tax of 30 cents per bushel, with a distribution of 150,000,000 dollars to the farmers in the event of their agreement to reduce the acreage by 20 per cent. The opinion is entertained that the improvement indicated by this had already been discounted and there was nothing to "go for". But on Monday the position was considerably improved. There was a marked rally and prices shot up owing to the further downward plunge of the dollar. The internationalism of Wall Street, which developed at a stage to the point of demanding an alround scaling of war debts has now turned to utter indifference to the prospects or fate of the World Economic Conference. With nearly two months of soaring stock prices Wall Street is to-day in the van of economic isolationism. The very men, who in November last considered no word too abusive for the President-elect, are to-day ready with their peans of praise for the new economic and monetary Messiah. But, at the same time, there is a distinct feeling that the Administration has by its frequent somersaults reduced American prestige in the eyes of foreigners, and that it should have made up its mind before taking any definite course in the negotiations at London. This, however, weighs lightly against the solid gains on the stock exchange, and Monday's gains were unquestionably substantial.

Programme of Economic Recovery.

The later part of the week witnessed but inconsiderable improvements in the prices and outlook. In the first place, it has taken more time than is imaginable for the nations, which are suffering a keen resentment at American sabotage, for Wall Street to persuade itself that ideas of stabilisation have been definitely abandoned and that the elaborately contrived boon will not be disturbed again by rumours of a stable dollar. Secondly, the technical position of the markets to-day is such that profit-taking rears its head and is sufficiently strong to check the advances that might otherwise have been possible. Thirdly, the prospects of industrial shares are now dependent, not only on the extent of the depreciation of the dollar but also on the co-ordination of the various pieces of legislation for engineering a genuine recovery of trade and the establishment of internal economic equilibrium. It must be remembered that the outburst of legislative activity, that characterised the last session of Congress, has meant that in the coming months the executive has a great deal to do by way of applying the principle accepted by the Congress to the actual requirements of each department of the national economy concerned. At present two measures, that are foremost in the public eye as well as before the Government departments, are the Industrial Recovery Act and the Farm Relief Act. On the wise application of these two measures depends the prospect of genuine recovery and the possibility of alround profit for industry and trade.

More Codes of Fair Competition.

It may, therefore, be useful to sketch the progress that has so far been made in respect of these two radical features of economic reform. Foreign observers have suggested more than once that the readiness of the steel industry to co-operate with the Government in the application of the principles of the Industrial Recovery Act to the steel industry is due solely to the fact that the conditions in the industry do not admit of any other kind of remedial action. That for the steel industry the problem of survival would otherwise be quite insoluble cannot be doubted or questioned. But the principles of the Industrial Recovery Act are so radical in character that a genuine public spirit is also required for the captains of any industry to acquiesce in their application to the interests with which they are connected. And the last week has shown that other industries are also not only ready, but anxious, to translate the principles of the Industrial Recovery Act into action and to pave the way for the easy restoration of economic equilibrium. The Administration is determined that no time shall be lost in evolving a definite plan and using the powers conferred on the Administration by these legislative measures. Oil producers are now virtually unanimous in approving the code of fair competition which is drawn up by the leaders of the oil industry. The code confers on the President power to regulate prices and production and to set minimum rates of pay and maximum hours of labour and to control exports and imports. It is remarkable how the industry can so soon abandon the standpoint which it had taken in regard to the Oil Control Bill which has been turned down by the Congress. It will be remembered that the Bill endeavoured to give the same powers to the Administration which the industry now proposes to confer voluntarily on the Government. It is expected that the code agreed on by the oil industry would be put into effect within three days and that, as it contains provision for considerable reduction of output further increases in the price of crude and refined oil might be made forthwith.

Higher Wages and Lesser Hours.

The meat-packing industry is also holding a conference to draw up a similar code of fair competition which will have the effect of helping the rise in prices. The cotton textile industry is the next to offer support to the Administration. It has been agreed that in the cotton industry there should be a minimum wage of 10 dollars per week for the South and 11 dollars per week for the North. The working hours are restricted to two shifts of 40 hours each. The effect of this code now agreed on is that working hours would be reduced by 20 per cent. and wage scales would be increased by 30 per cent. The effect

of such measures on a position of disequilibrium between productive capacity and consumptive demand is too obvious to need any explanation. The American Administration to-day is almost alone in its tacit acceptance of the socialist explanation of the present depression, namely, that the depression is only a crisis in consumption and that unless the increase in purchasing power is more than the increase in prices the old disequilibrium would be continued and the prospects of recovery would be lessened. The Administration had, therefore, made clear that in any agreement in regard to fair competition there must be assurance of fair standards of living for the workers and the total purchasing power in the masses must be increased as much and as quickly as possible.

Wages in Railroads.

The problem of wages in the railways would seem to be on a different footing. It is realised that unless the wage controversy is settled, the reorganisation of the railroads would have to be held up indefinitely. The co-ordinator appointed under the Rail-road Co-ordination bill has held a conference within the railroad executives and the union leaders ; and it was expected that he would settle the controversy on the basis of further small reductions in wages and establishment of the existing voluntary cuts on permanent basis. Later in the week it was learned that the rail wage controversy has been deferred for 8 months. It is felt that, unless the scope for other economy and for expansion of the revenue of the railways are fully explored, it would be unjust and inexpedient to hurry the reduction in wages. Hopes are entertained that if the rail-road Co-ordinator effects the minimum within the limits of the Transportation Act, the necessity for reduction of wages may be avoided. Leading executives of the Eastern Rail Roads have also decided to form a committee which will make every effort to reduce waste and eliminate duplication of services.

Along with the formulation of codes of fair competition, the President is also progressing with the schemes of public expenditure. Public works have been ordered involving expenditure of 100,000,000 dollars to be actively started by October with steady additions thereafter. At the same time, the Secretary of the Navy has intimated that private and public ship-yards will participate in the construction of 32 ships costing 238,000,000 dollars and that this programme formulated by the Government will help to keep the ship-yards working full capacity for two years. Expenditure of 9,362,000 dollars has also been authorised for the building of aeroplanes. From all this, it is clear that the Administration is anxious that neither at the present nor at any later stage should the recent improvement in business conditions be allowed to suffer a relapse. The setback which occurred on the rumours of stabilisation have given the Administration a lively sense of insecurity of the present position and the need for well-planned schemes to support the present structure of prices and to help it to rise higher. It will be seen, thus, that the American programme of industrial and economic recovery rests on the following :

(1) Monetray inflation working through its actual effects on prices and through its effects on the psychology of the markets.

(2) The reconstruction of banks and other institutions through the Bankers' Discount Corporation and through the financing of the agricultural mortgages.

(3) Agricultural Farm relief with reduction of acreage and compensation for farmers as its principal plank.

(4) The prescription of codes of fair competition containing provisions for minimum wages and maximum hours, and

(5) Public expenditure and public works.

While the outer world might justly resent America's indifference to the problem of concerted international action, it should not be forgotten that America is at the moment making the most valuable efforts towards the recovery. It is difficult not to command faith in the success of this programme ; and Americans may be pardoned for believing that the recovery brought about by these means would help world trade and economy far more effectively than the comparatively trivial question of the stabilisation of two or more of the principal exchanges.

GERMANY

DEVISEN & EXPORT SURPLUS.

The results of the negotiations between Dr. Schacht and the foreign creditors in London have been, on the whole, accorded a favourable reception in Germany. Dr. Schacht had, before leaving for London, adequately instructed public opinion about that weakness in the German financial position, which is a strength in the negotiations that were to be conducted shortly. With such a keen appreciation of the difficulty of making transfers and, therefore, of the value of any concession in regard to the priority of claims for transfers, Germany had no doubt that there would be no difficulty in securing an adequate *quid pro quo*. Dr. Schacht's spirit of accommodation in granting priority to the Standstill creditors and the interest payments on the Young, and probably, the Dawes, loans has, therefore, had its natural effects in bringing about a reductnon in the interest rate on the debts covered by the Standstill Agreement from $4\frac{3}{4}$ per cent. to $4\frac{1}{4}$ per cent. its natural effects in bringing about a reduction in readily agreed to the principles mentioned in these

columns last week, the Conference in London might have ended in a deadlock and further embitterment of relations between Germany and the creditor powers occasioned.

It is very encouraging that the favourable balance of trade in merchandise has been increasing of late to an extent which indicates an even further improvement on the usual seasonal trend. The German export surplus for May shows a considerable increase over the April figures. Considering that in the previous year, the trend was different, this might be regarded as pointing to the possibility of genuine improvement in the position. But this has done little to alter Germany's transfer problem. Even if the present improvement had occurred earlier, Dr. Schacht's case for a transfer moratorium would have been just as strong. For the outstanding feature of Germany's financial position in recent months is that the Reichsbank has not been in receipt of as much *devisen* as one would except from the favourable balance of trade. During the whole of April and May and the first fortnight of June the Reichsbank has lost gold and *devisen* steadily in the face of an increase in the surplus of exports. As the realisations in foreign currencies of the value of exports take time to make, it is natural that changes in the export surplus are reflected in the statements of the Reichsbank regarding devisen at a later stage. This explains the continuance of a fair rate of *devisen* even in months of low export surplus. But at the present time the increase in *devisen* has been out of proportion to the increase in the export surplus. The Berlin Correspondent of the *Economist* attempts to explain this disparity by two reasons, the common point of which being that not all the exports of Germany are paid for in actual foreign money. Firstly, German exports to Russia are, in large part, mostly long-term credits. Secondly, the German industries have of late been permitted to accept their own bonds in payment for exports on condition that an increase of exports is thereby assured. Such a course has special attractions owing to the fact that German bonds are quoted far below par and that the debits are made for the full value of the bonds. This makes possible exports at prices which would otherwise have been an effective block to the exchange. Owing to the combined effect of these two features, Germany has had great losses in international currencies and the problem of transfer has not been mitigated by the recent rise in the exports surplus which bids fair to continue.

Germany has the distinction of making efforts to solve the problem of unemployment ahead of all the other nations. The schemes in this regard have been described in earlier articles in this section. Here it may be useful to note that, according to Herr Hitler, the number of unemployed has decreased by 1.2 million since he took office. Though the statement may be verbally accurate and true, it is still vitiated by a false suggestion. For the fall in unemployment which is undoubtedly considerable is the result of schemes initiated by his two predecessors in office, Von Papen and General Schleicher. The schemes that they initiated could not be put fully into effect during the winter; and their resumption after the accession to the Chancellorship by Herr Hitler has meant a greater increase in the volume of employment than it would have been possible for a single administration to effect in such a short time. But this can hardly detract from the merits of the new schemes that have been evolved by the Hitler

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write to-day stating date of birth, when full particulars will be sent to you, without obligation on your part.

administration. When the present special works are executed it may probably be found that the new schemes have more than filled the breach and more than sustained the volume of employment at its present level.

REGULATION OF INDUSTRY IN U. S. A.

INROADS INTO INDIVIDUALISM.

The following are the more important provisions of the Industrial Recovery Act, which was signed by President Roosevelt on June 16.

Sec. 1. A national emergency is hereby declared to exist. It is hereby declared to be the policy of Congress to remove obstructions to the free flow of inter-state and foreign commerce which tend to diminish the amount thereof; and to provide for the general welfare by promoting the organisation of industry for the purpose of co-operative action among trade groups, to induce and maintain united action of labour and management under adequate governmental sanction and supervision, to eliminate unfair competitive practices, to promote the fullest possible utilisation of the present productive capacity of industries in order to avoid undue restriction of production (except as may be temporarily required), to increase the consumption of industrial and agricultural products by increasing purchasing power, to reduce and relieve unemployment, to improve standards of labour and otherwise to rehabilitate industry and to conserve natural resources.

DELEGATION OF PRESIDENT'S POWERS

Sec. 2. The President may delegate any of his functions and powers under this title to such officers, agents, and employees as he may designate or appoint, and may establish an industrial planning and research agency to aid in carrying out his functions under this title.

This title shall cease to be in effect, and any agencies established hereunder shall cease to exist at the expiration of two years after the date of enactment of this Act or sooner if the President shall by proclamation, or the Congress shall by joint resolution declare that the emergency recognised by Section 1 has ended.

APPLICATION FROM BUSINESS INTERESTS.

Sec. 3. (*a*) Upon the application to the President by one or more trade or industrial associations or groups, the President may approve a code or codes of fair competition for the trade or industry or sub-division thereof, represented by the applicant or applicants, if the President finds (1) that such associations or groups impose no inequitable restrictions on admission to membership therein and are truly representative of such trades or industries or sub-divisions thereof, and (2) that such code or codes are not designed to promote monopolies or to eliminate or oppress small enterprises and will not operate to discriminate against them, and will tend to effectuate the policy of this title: provided, that such code or codes shall not permit monopolies or monopolistic practices: provided, that where such code or codes affect the services and welfare of persons engaged in other steps of the economic process, nothing in this section shall deprive such persons of the right to be heard prior to approval by the President of such code or codes.

RIGHT TO IMPOSE CODES OF FAIR COMPETITION.

The President may, as a condition of his approval of any such code, impose such conditions in furtherance of the public interest as he in his discretion deems necessary to effectuate the policy herein declared.

(*b*) After the President shall have approved such code, the provisions of such code shall be the standards of fair competition for such trade or industry or sub-division thereof. Any violation of such standards in any transaction in or affecting interests or foreign commerce shall be deemed an unfair method of competition in commerce within the meaning of the Federal Trade Commission Act, as amended, but nothing in this title shall be construed to impair the powers of the Federal Trade Commission under such Act as amended.

(*c*) The several district courts of the United States are hereby invested with jurisdiction to prevent and restrain violations of any code of fair competition approved under this title.

(*d*) Upon his own motion, or if complaint is made to the President that abuses inimical to the public interest and contrary to the policy herein declared are prevalent in any trade or industry or sub-division thereof, and if no code of fair competition therefor has theretofore been approved by the President, the President, after such public notice and hearing as he shall specify, may prescribe and approve a code of fair competition for such trade or industry or sub-division thereof.

REGULATION OF FOREIGN COMPETITION.

(*e*) On his own motion, or if any labour organisation, or any trade or industrial organisation, association or group, which has complied with the provisions of this title, shall make complaint to the President that any article or articles are being imported into the United States in substantial quantities or increasing ratio to domestic production of any competitive article or articles and on such terms or under such conditions as to render ineffective or seriously to endanger the maintenance of any code or agreement under this title, the President may cause an immediate investigation to be made by the United States Tariff Commission, which shall give precedence to investigations under this sub-section, and if, after such investigation and such public notice and hearing as he shall specify, the President shall find the existence of such facts, he shall, in order to effectuate the policy of this title, direct that the article or articles concerned shall be permitted entry into the United States only upon such terms and conditions as he shall find it necessary to prescribe in order that the entry thereof shall not render or tend to render ineffective any code or agreement made under this title.

In order to enforce any limitations imposed on the total quantity of imports, in any specified period or periods, of any article or articles under this sub-section, the President may forbid the importation of such article or articles unless the importer shall have first obtained from the Secre-

STATISTICAL INFORMATION

FOREIGN TRADE OF BOMBAY.

BOMBAY.

The aggregate value of the foreign trade of Bombay—Imports and Exports—for the month of May, 1933, amounted to Rs. 11.33 crores, showing an improvement of Rs. 1.37 crares, or nearly 14 per cent., as compared with the figures for the corresponding month of the previous year, and of Rs. 2.64 crores, or 30 per cent., as compared with those for May, 1931. The improvement of Rs. 1.37 crores is chiefly attributable to increased shipments of both Indian produce and foreign merchandise and gold. Imports of gold also increased but those of merchandise and silver showed noticeable decreases.

Imports of merchandise amounted to Rs. 3.74 crores, showing a fall of Rs. 1.4 crore, or 27 per cent. from the figures for May, 1932, and of Rs. 81.79 lakhs, or 18 per cent. from those for May, 1931. The fall of Rs. 1.4 crore is chiefly due to smaller arrivals of raw cotton (−16,855 tons and −Rs. 1.47 crore). Noticeable decreases were also recorded in the imports of alizarine and aniline dyes (−Rs. 7.82 lakhs), artificial silk yarn and piecegoods (−Rs. 6.1 lakhs), mineral oils (−Rs. 4.21 lakhs), though the quantity imported was larger by over 1¼ million gallons, silk, raw (−Rs. 4.19 lakhs), and cotton twist and yarn (−over ¼ million lb. and—Rs. 4.08 lakhs). On the other hand, there were larger arrivals of silk manufactures (+Rs. 10.11 lakhs), motor cars, including motor wagons, cycles and parts thereof (+Rs. 6.94 lakhs), machinery and millwork (+Rs. 2.65 lakhs) and cotton white piecegoods (+2 million yards and +Rs. 2.53 lakhs). Imports of gold rose by Rs. 1.67 lakh to Rs. 5.68 lakhs as compared with those in May, 1932, but fell by Rs. 10.49 lakhs as compared with those in May, 1931. Arrivals of silver declined by Rs. 15.05 lakhs and Rs. 16.18 lakhs, respectively, to Rs. 1.57 lakhs.

Exports of Indian produce were valued at Rs. 2.38 crores, showing an increase of Rs. 1.18 crore, or cent per cent. over the figures for the corresponding month of the previous year, but a decrease of Rs. 1.15 crore, or nearly 33 per cent. as compared with the figures for the same month of the year 1931. The increase of Rs. 1.18 crore is mainly due to larger shipments of raw cotton (+14,605 tons and +Rs. 94.49 lakhs), raw wool (+1¼ million lb. and +Rs. 4.79 lakhs), cotton twist and yarn (+over ½ million lb. and +Rs. 3.05 lakhs) and hides and skins, raw (+Rs. 2.22 lakhs). Exports of myrabolans, manganese ore and oils also showed increases. Shipments of gold amounted to Rs. 4.98 crores as against Rs. 3.28 crores in May, 1932 and *nil* in May, 1931, while there were no exports of silver against *nil* and Rs. 13,500, respectively.

Re-exports of foreign merchandise amounted to Rs. 14.84 lakhs as against Rs. 12.85 lakhs and Rs. 24.96 lakhs, respectively.

The trade statistics of the first two months of the current financial year 1933-34 show a falling off of Rs. 4.05 crores, or 33 per cent. and of Rs. 2.59 crores, or 24 per cent., in imports, but an improvement of Rs. 4.63 crores, or nearly 45 per cent., and of Rs. 7.31 crores, or nearly 96 per cent., in exports, as compared with the figures for the corresponding periods of the years 1932-33 and 1931-32, respectively. Imports of gold declined by Rs. 2.24 lakhs and Rs. 15.17 lakhs to Rs. 9.61 lakhs and those of silver by Rs. 22.78 lakhs and Rs. 40.96 lakhs to Rs. 2.65 lakhs, respectively. Imports of merchandise contracted by Rs. 3.79 crores and Rs. 2.03 crores to Rs. 7.91 crores as compared with those in the same periods of 1932-33 and 1931-32. The contraction of Rs. 3.79 crores is accounted for mainly by smaller receipts of raw cotton (−36,744 tons and −Rs. 3.2 crores). Decreases were also recorded in the imports of kerosene oil (−nearly 3 million gallons and −Rs. 30.01 lakhs), alizarine and aniline dyes (−Rs. 17.84 lakhs), cotton twist and yarn (−nearly 1¼ million lb. and −Rs. 14.09 lakhs), artificial silk yarn (−over 1 million lb. and −Rs. 13.02 lakhs), metals and ores (−Rs. 7.14 lakhs) and silk, raw (−Rs. 6.55 lakhs). Imports of silk manufactures, motor cars, including motor wagons, cycles and parts thereof and machinery and millwork, however, showed increases of Rs. 11.5 lakhs, Rs. 10.45 lakhs and Rs. 4.79 lakhs, respectively.

Shipments of gold amounted to Rs. 9.52 crores as against Rs. 7.51 crores in the corresponding period of 1932-33 and *nil* in the same period of 1931-32, and those of silver to Rs. 5,942 against Rs. 51,405 and Rs. 13,500, respectively. Exports of Indian produce were valued at Rs. 5.13 crores as against Rs. 2.51 crores and Rs. 7.14 crores, showing a rise of Rs. 2.62 crores, or 104 per cent. over the figures for the corresponding period of 1932-33 but a fall of Rs. 2 crores, or 28 per cent. from those for the same period of 1931-32. The rise of Rs. 2.62 crores is mainly due to increased shipments of raw cotton (+39,089 tons and +Rs. 2.38 crores). Shipments of raw wool and cotton twist and yarn also increased by 1¾ million lb. and nearly 1 million lb. in quantity and by Rs. 6.42 lakhs and Rs. 3.08 lakhs in value respectively, and those of myrabolans by Rs. 4.59 lakhs.

Re-exports of foreign merchandise amounted to Rs. 29.82 lakhs as against Rs. 29.23 lakhs and Rs. 50.45 lakhs, respectively.

THE INDIAN REVENUES.

The Indian Revenues for the two months of April to May, 1933, contrast thus with the corresponding period of two previous years (000's omitted):—

	1931-32	1932-33	1933-34
	Rs.	Rs.	Rs.

Total ...	14,41,283	Total ...	14,41,283

Extracts from Director's Report:

Report covers the 18th year which ended on 31st March, 1933.

The working of the Company for the past twelve months resulted in a profit of Rs. 89,056-4-6 which, added to the Rs. 11,766-0-2 brought forward from last Balance Sheet, gives a total amount of Rs. 1,00,822-4-8 available for distribution. An Interim Dividend at the rate of 5 per cent. on the Ordinary Share Capital was paid on 20th December, 1932, and it is now proposed to pay a final dividend at the rate of 5 per cent., making 10 per cent. for the year, free of Income-tax, leaving a balance of Rs. 16,822-4-8 to be carried forward as follows:—

Amount at credit of Profit and Loss Account as per audited accounts Rs. 58,822-4-8, less Dividend for the second half-year ending 31st March, 1933, on Preference Shares paid on 1st April, 1933, free of Income-tax Rs. 12,000, less Final Dividend on Ordinary Shares at 5 per cent., free of Income-tax Rs. 30,000, total Rs. 42,000, balance Rs. 16,822-4-8.

CAREW & CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	16,00,000	Block (net) ...	12,92,45
Reserve ...	5,12,910	Stock-in-Trade ...	11,22,083
Debts ...	5,62,490	Stores, etc., ...	2,29,671
Profit & Loss ...	3,98,380	Outstandings ...	3,49,576
		Cash & Deposits ...	78,545
		Investments ...	1,450
Total ...	30,73,780	Total ...	30,73,780

Extracts from Directors' Report:

The year ended 31st March, 1933.

Resulted in a working profit of Rs. 4,63,920-8-6; to this has to be added the amount at credit brought forward from last Account Rs. 10,064-13-6, total Rs. 4,73,985-6, deduct for Depreciation Rs. 75,605-1-2, making a total of Rs. 3,98,380-4-10 which we propose to deal with as follows:—To payment of a Dividend at Re. 1-8 per share Rs. 2,40,000, to Income Tax and Super Tax Reserve Rs. 90,000, to General Reserve Rs. 50,000, to Carry forward to next Account Rs. 18,380-4-10, total Rs. 3,98,380-4-10.

Prices for Indian-made Sugar were much lower than the previous season owing to the intense competition from new factories to sell their sugar at any price, and we are afraid that this competition will be still more severe next season with the increase in the number of factoies.

The Company's Sugar Factory worked very satisfactorily and a further improvement in yield was obtained. The Cane Crop is so far doing well and ample supplies of Cane should be available for next season if growing conditions continue to be favourable.

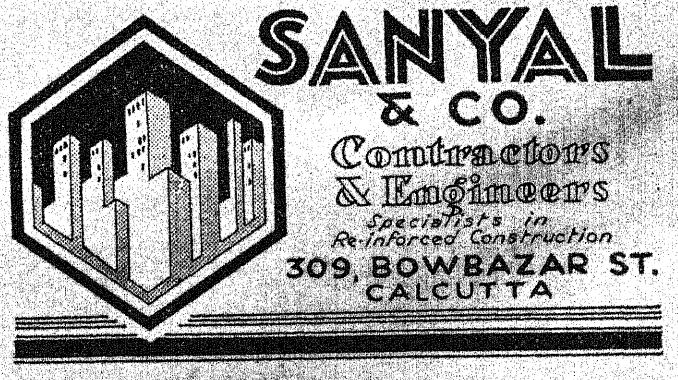
CALLENDER'S CABLE AND CONSTRUCTION CO., LD.

The accounts for 1932 show a net profit of £224,278, against £223,660 for 1931. The 1932 figure, however, is arrived at after transferring £160,000 from the renewals and contingencies account. At the last General Meeting it was pointed out that certain renewals and replacements in connexion with the pioneering work of very high tension cables would require to be provided for, and £200,000 was considered to be necessary. Not more than £160,000 has been required, and there remains, therefore, a balance in the renewals and contingencies account of £40,000. The dividend on the Ordinary shares is 15 per cent. for the fourteenth successive year, and after allowing for this and the Preference dividends the balance forward is virtually unchanged at £292,932 (against £292,054). In the balance-sheet, stocks expenditure on incomplete contracts, debtors, etc., and cash total £1,995,000. In addition, investments stand at £1,740,984, of which £1,516,746 is shown under the heading of sundry investments and £224,238 under subsidiary companies. Creditors, bills payable, amounts owing to subsidiaries, and final dividend requirement total £1,251,000.

During the year the Company disposed of its holding in the Weald Electricity Supply Company, taking in exchange shares in the County of London Electric Supply Company, and these shares are part of the item sundry investments above mentioned. The surplus in value secured by this exchange has not been taken into account in calculating the profits of the year.

RUSTON AND HORNSBY, LD.

The Directors announce a loss for the year ended 31st March, after providing for losses on exchange and other contingencies, and after taking into account reserves available for such purposes, of £76,123 (against £119,262 for 1931-32). This increases the debit balance carried forward to £119,465. Stocks of materials and the finished stock of machinery have been taken at cost price or under. Buildings, plant and machinery have been maintained out of revenue, but owing to the continuance of the unfavourable circumstances referred to in the last report, it has again been necessary to place the annual charge for depreciation against capital reserve account. Ample provision has been made for doubtful debts. There has been no increase in the volume of business, the improved result having been obtained by means of further economies.



SARAN ENGINEERING CO.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	1,00,000	Block (net) ...	2,03,371
Debentures ...	1,50,000	Stores & Spares ...	78,039
Reserves ...	52,500	Outstandings ...	89,964
Other Debts ...	1,25,782	Cash	84,147
Profit & Loss ...	27,239		
Total ...	4,55,521	Total ...	4,55,521

Extracts from Directors' Report:

Report covers the six months ended 31st March, 1933, showing a profit on Revenue Account of Rs. 37,903-3, add balance brought forward from previous half-year Rs. 12,411-4, total Rs. 50,314-7. Deduct amount placed to—Debenture Sinking Fund Rs. 2,500, Depreciation Rs. 5,575-4-3, Reserve Fund Rs. 15,000, total Rs. 23,075-4-3, leaving at credit of Profit and Loss Account Rs. 27,239-2-9, this balance we recommend should be disposed of as follows:—To payment of a dividend of 5 annas per share (free of Income Tax) Rs. 15,625, carried forward Rs. 11,614-2-9.

The works have been kept well employed and the position as regards forward orders is satisfactory.

In orden to put the finance of the Company on a more satisfactory basis a Debenture Loan for Rs. 1,50,000 was issued on 1st October, 1932, for a term of 30 years, bearing interest at 6 per cent.

ALYNE-PATHEMARA TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assses.	Rs.
Capital ...	1,10,000	Block ...	1,80,623
Debts ...	3,52,884	Crop a/c. ...	10,743
		Outlay ...	5,923
		Cash in transit ...	5,500
		Cash ...	4,584
		Profit & Loss ...	2,55,511
Total ...	4,62,884	Total ...	4,62,884

Extracts from Directors' Report:

The following are details from the report for Season 1932.

Crop.—The Alyne Division produced a crop of 5,360 maunds of green leaf which, in accordance with the arrangement referred to in the last Report, was sold to the Tilkah Tea Company, Limited. The outturn of Pathemara was 3,410 maunds of tea as compared with an estimate of 2,800 maunds and an actual crop of 2,974, maunds in 1931.

The teas manufactured at the Pathemara factory, although more stalky than usual owing to a freer system of plucking, were useful in cup and were generally up to the standard for the district, and on a market considerably more depressed than in 1931 realized an average price of 4 annas 2 pies a lb. as compared with an average of 4 annas 9 pies a lb. obtained for the whole of the Company's crop in that year.

Accounts.—The receipts amounted to Rs. 90,917-6-2 and the expenditure to Rs. 1,20,956-1-7, showing a balance at debit of Revenue Account of Rs. 30,038-11-5. This is increased by: Balance brought forward from previous year's Account Rs. 2,25,171-15-7, Subscriptions to Octavius Steel & Co., Ltd., Provident Institution, Rs. 300, total Rs. 2,25,471-15-7, leaving a debit balance on Profit and Loss Account of Rs. 2,55,510-11 which is carried forward.

Season 1933.—The Estimates for Season 1933, are for a crop of 5,680 mds. Green Leaf and 2,823 mds. Tea to cost Rs. 1,11,321.

These figures are subject to revision in the event of the proposed scheme for restriction of output being adopted.

The Company's quota under the Regulation of Exports Scheme is 4,023 maunds. The Alyne leaf will again be purchased by the Tilkah Tea Company, Limited.

The Future.—Now that an agreement between the main tea producing countries has been reached for the control of the export of tea from these countries the outlook for the industry is somewhat brighter than it has been in recent years. In view of this the Managing Agents have decided not to withdraw their support from the Company for the time being; it is their intention, however, to reconsider the matter towards the close of the current season.

Labour.—1,037 hands were employed on the gardens at 31st December, 1932.—

WALFORD TRANSPORT, LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	5,25,500	Block (net) ...	3,00,868
Reserves ...	64,227	Stock & Stores ...	3,87,136
Debts ...	4,04,428	Goods in transit ...	2,979
		Outstandings ...	1,68,760
		Cash & Deposits ...	7,644
		Profit & Loss ...	1,26,768
Total ...	9,94,155	Total ...	9,94,155

Extracts from Directors' Report:

Report covers the year ended 31st March, 1933.

In the Report for the previous year's working details were given of the sale of the Company's fleet of buses which during that year were the cause of a serious loss of revenue. As a result of the sale of these vehicles, and by the exercise of the utmost economy, the loss on this department, including depreciation and all other charges, amounts this year of Rs. 47,580-9-3 as against a loss of Rs. 2,35,921-13-9 in the previous year.

The Agency Department has returned a profit of Rs. 51,694-6-4 leaving a net profit on the year's working after allowing for depreciation and all other charges of Rs. 4,113-13-1. After adjusting the loss carried forward as per the previous Account of Rs. 1,30,881-10-4 there is left a balance at debit to be carried forward this year of Rs. 1,26,767-13-3.

BASMATIA TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	3,40,000	Block ...	4,12,287
Reserves ...	90,000	Crop a/c ...	62,242
Debts ...	30,446	Outlay ...	5,669
Profit & Loss ...	22,615	Outstandings ...	2,868
Total ...	4,83,061	Total ...	4,83,061

Extracts from Directors' Report:

Report covers the Season 1932.

After providing for full depreciation the Revenue Account shows a profit of Rs. 29,102-10-2, and after making sundry adjustments and allowing for taxation, a sum of Rs. 22,614-13 remains at credit of Profit and Loss Account, from which it is proposed to pay a dividend of 5 per cent. leaving a balance of Rs. 5,614-13 to be carried forward.

A crop of 3,151 maunds was made during the season which realized an average of As. 10 per lb. compared with a crop of 2,758 maunds sold at As. 9-4 per lb. in 1931.

Quality of teas showed considerable improvement during the past season. A total of 36 maunds Taporhula Tea Seed was disposed of satisfactorily.

A further 11 acres of new planting was done during the year, bringing the total area under tea up to 335.97 acres.

The Estimate for 1933 allows for a crop of 2,419 maunds, on a restricted basis, at an expenditure of Rs. 86,790 on the garden and Rs. 36,687 in Calcutta.

Extracts from Directors' Report:

Report relates to the half-year ended 31st March, 1933.

Length of Line.—The route mileage of line open for traffic at the end of the half-year was 43.92 miles.

Capital Expenditure.—The total Capital Expenditure to the close of the half-year was Rs. 30,06,201 plus Rs. 1,06,307 on Stores, or Rs. 31,12,508 in all.

The Capital Expenditure during the half-year was Rs. 7,284.

Depreciation on workshop machinery during the half-year was Rs. 1,316.

Dividend and Balance.—The Directors recommended that the available balance be disposed of as follows:—Payment of a dividend of Rs. 2-8 per share, at the rate of 5 per cent. per annum, free of Income-tax, costing Rs. 40,000, balance to be carried forward Rs. 90,920, total Rs. 1,30,920.

The dividends paid for the two preceding half-years were at the rate of 5 per cent. and 8 per cent.

GILLAPUKRI TEA AND SEED CO., LD.

			Cash and Invests.	...	1,61,789
Total	...	5,45,840	Total	...	5,45,840

Extracts from Directors' Report:

Report relates to the Season 1932.

After providing for depreciation, the Nett Profit for the season is Rs. 56,632-14-10, and after making sundry adjustments and allowing for taxation, there remains at credit of Profit and Loss Account the sum of Rs. 55,881-8-3, from which we recommend the payment of a dividend of 12½ per cent. absorbing Rs. 45,000 and that the balance of Rs. 10,881-8-3 be carried forward.

Crop.—Growing conditions throughout the season were favourable and the crop weighed out at 4,512 maunds which sold at an average of As. 12-2 per lb. comparing with 4,227 maunds sold at As. 13-4 per lb. in the previous year.

Tea Seed.—A crop of 88 maunds was secured, all of which was disposed of.

Estimates.—The Estimate for 1933 allows for a crop of 4,400 maunds at an expenditure of Rs. 1,36,754 at the garden and Rs. 75,992 in Calcutta.

Total	...	24,95,566	Total	...	24,95,566

Extracts from Directors' Report:

Report covers the half-year ended 31st March, 1933.

Length of Line.—The route mileage of line open for traffic at the end of the half-year was 52.35 miles.

The mileage opened for traffic during the half-year was nil. Gauge 2 ft. 6 ins.

Capital Expenditure.—The total Capital Expenditure to the close of the half-year was Rs. 25,47,619 plus Rs. 17,862 on stores, or Rs. 25,65,481 in all.

The Capital Expenditure during the half-year was Rs. 9,314.

Dividend and Balance.—The Directors regret that they are unable to recommend the payment of any dividend for the period under review, in view of the severe decrease in earnings and the unsatisfactory financial position of the Company. They, therefore, recommend that the balance of Rs. 65,550 be carried forward.

The dividends paid for the two preceding half-years were at the rate of 4 per cent. and nil.

BARNAGORE JUTE FACTORY CO., LD.

The Company, which recently announced a resumption of Ordinary dividends with a payment of 5 per cent., reports a net loss of £8,550 for the year ended 31st March. This compares with a loss of £32,268 for 1931-32. The Directors have transferred £30,000 from contingencies reserve, and this enables them to write off the year's loss, pay the dividends on the Preference and Ordinary shares, and carry forward a credit balance of £10,599 (against £12,899). British and Indian Government Securities stand in the balance-sheet at £227,167. Stock has been valued "at or under cost but over market replacement value" and is entered in the accounts at £402,559; in the opinion of the Board any contingent loss is amply covered by the Company's reserves.

FUTWAH-ISLAMPUR LIGHT RY., CO., LD.

Extracts from Director's Report:

Report relates to the half-year ended 31st March, 1933.

Length of Line.—The route mileage of line open for traffic at the end of the half-year was 27 miles. Mileage opened for traffic during the half-year nil. Gauge 2 ft. 6 ins. Date of first opening for traffic, 24th January, 1922.

Capital Expenditure.—The total Capital Expenditure to the close of the half-year was Rs. 19,40,975 plus Rs. 8,280 on stores, etc., or Rs. 19,49,255 in all.

The Capital Expenditure during the half-year was nil.

Earnings.—Cross Earnings—The Gross Earnings during the half-year were Rs. 52,027. During the corresponding period in 1932 they were Rs. 59,583.

Decrease Rs. 7,556 or 12.68 per cent.

Dividend.—The Guaranteed Dividend at the rate of 3½ per cent. per annum is payable to the Shareholders less Income-tax Rs. 16,714, balance to be carried forward Rs. 5,743, total Rs. 22,457.

The dividend, if sanctioned at the General Meeting, will be paid on receipt of the amount due from the Government of India.

TAVOY TIN DREDGING CORP. LD.

The report for 1932 states that in furtherance of the curtailment of operations previously instituted four of the six dredges, as well as the gravel pumping plant, were laid up throughout the year. From the two dredges in commission the output was 735½ tons of concentrate (against 692 tons), and 84 tons (against 47 tons) were won on tribute. The average sale price rose from £116 to £137 per ton, and as costs were lower by over £9,000 to operating result was a profit of £26,725, against £1,399 for 1931. Realization costs and Eastern and London overhead charges were lower by £3,986. The final result, after meeting interest charges, is a net loss of £6,601, compared with £33,541. This loss increases the debit to go forward on profit and loss account to £39,663. Stores, stock, debtors and cash total £73,000; creditors amount to £31,038, and in addition there is a loan outstanding of £34,000. During the year 46,719 shares of 4s. each were issued in full settlement of outstanding Directors, secretarial, and technical fees, the issued share capital now stands at £388,429.

SAIKOWAH (ASSAM) TEA CO., LD.

Report relates to the year ended 31st December, 1932.

Planting.—An extension of 62 acres has been made during the year, bringing the planted area up to 662 acres. Infilling has been given every attention and our Visiting Agent reports that the garden is in good condition. Roads —A further 1½ miles of the Rupai road has been taken over by the Local Board.

Yield.—As compared with previous years was as follows:—1932, 173,529 lb.; 1931, 105,645 lb.; 1930, 47,413 lb.; 1929, 13,844 lb.

Average.—The teas were disposed of as follows:—

London, 149,634 lb. at 15.55 pence per lb.; Calcutta, 22,589 lb. at 5.29 annas per lb.; Draft, etc. 1,306 lb.

Extracts from Directors' Report:

The following details are from the report for the year ended December 31, 1932. A rebate of 12½ per cent. was allowed to the consumers with effect from March last. Soon after this the government compelled the company to reduce the meter rent by As. 8 per meter, which came into force from November 20, 1932. Taking into consideration the rebate and the reduction in meter rent, the income of the company would be affected to an extent of Rs. 50,000 anuually. The three D. C. sets of which the block value is Rs. 63,795 and which were working from the commencement of the power house are scrapped, as unserviceable. The capital expenditure during the year under report amounted to Rs. 87,995. The company's nett profit during the year ended December 31, 1932, amounted to Rs. 55,432 which, with the sum of Rs. 97 carried from the last year's account, makes a total of Rs. 55,529. Of this sum the directors have made the following allocations:—Loan redemption fund, Rs. 15,000; reserve fund, Rs. 10,000; total Rs. 25,000. There is thus left for disposal the sum of Rs. 30,529. This amount the directors recommend apportioning as follows:—For the payment of a dividend of 6 per cent., free of income-tax, to holders of fully paid up shares for the year ended December 31, 1932, Rs. 30,000; for carrying forward to next year's account Rs. 529.

The report of the Madras Electric Supply Corporation for 1932 states that the number of Board of Trade units sold during the year showed an increase of 23.40 per cent. Consumers connected at the end of 1932 numbered 8,530 (against 8,024 at the end of 1931), total connections in kw.s were 23,620 (22,629); B.T.U.s sold 29,595,764 (23,984,372); balance on revenue account, £134,071 (£128,867). Nett profit was £77,602. The directors propose a final dividend of 5½ per cent. (actual) on ordinary (making 8 per cent. for year), free of tax; forward, £21,193. The result of the Tramways Company's working for 1932 showed an available balance (including amount brought forward) of £18,499, out of which a dividend of 5 per cent., free of tax, on ordinary was paid.

HOWRAH-SHEAKHALLA LIGHT RY. CO., LD.

Synopsis of Balance Sheet:

Liaabilities	Rs.	Assets	Rs.
Capital ...	6,00,000	Block ...	5,13,566
Debts ...	27,854	Stores, etc. ...	35,815
Profit & Loss ...	36 760	Outstandings ...	11,921
		Cash & Invests. ...	1,03,312
Total ...	6,64,614	Total ...	6,64,614

Extracts from Directors' Report:

Report covers the half-year ended 31st March, 1933.

Length of Line.—The route mileage of line open for traffic at the end of the half-year was 19.78 miles.

Capital Expenditure.—The total Capital Expenditure to the close of the half-year was Rs. 8,00,399 plus Rs. 35,775 on stores or Rs. 8,36,174 in all.

The Capital Expenditure during the half-year was Rs. 105 on Permanent Way.

Earnings—Gross Earnings.—The Gross Earnings during the half-year were Rs. 79,875 plus Rs. 19,715 compensation from E. I. Ry. Total Rs. 99,590.

During the corresponding period of 1931-32 they were Rs. 83,818 plus Rs. 21,754 E. I. R. compensation,—Total Rs. 1,05,572. The decrease is Rs. 5,982 or 5.7 per cent. and is due to trade depression.

Dividend and Balance.—The Directors recommended that the available balance be disposed of as follows:—Payment of a dividend of Rs. 4 per share, at the rate of 4 per cent. per annum, less Income-tax, in respect of the year ended 31st March, 1933, costing Rs. 19,938, balance to be carried forward Rs. 16,822, total Rs. 36,760.

The Dividends paid for the two preceding half-years were at the rate of 4 per cent. and nil. The dividend now proposed makes a total distribution of 4 per cent. for the year 1932-33.

BOMBAY SUBURBAN ELECTRIC SUPPLY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	17,00,000	Block (nett) ...	19,66,118
Compensation fund	1,000	Stores ...	6,397
Reserves ...	10.000	Outstandings ...	66,733
Loans ...	1,15,351	Advances ...	8,899
Unpaid dividends ...	244	Cash balance ...	5,037
Debts ...	1,22,186		
Profit ...	99,403		
Total Rs. ...	20,48,134	Total Rs. ...	20,48,184

Extracts from Directors' Report:

The following details are from the report for the year ended March 31, 1933. Supply was regular and free from serious interruptions. The company's distribution system has been maintained in good order throughout the year. The following gives a comparison of the expansion of the company's business during the past two years:—Number of street lamps installed—1932, 2,525; 1933, 2,723. Number of connections for lighting and fans—1932, 2,972; 1933, 3,434. For motive power—1932, 102; 1933, 126. Supply was extended during the year to Versova where His Excellency the Governor of Bombay performed the inauguration ceremony on January 27. The beach committee and numerous residents of Versova have since availed themselves of the facilities now existing both for street lighting and for general purposes. The Government of India have requisitioned supply for their new aerodrome now under construction at Juhu. From the profit and loss account, it will be seen that the year's working shows a nett profit of Rs. 87,447, after making all due deductions on account of working costs, depreciation, etc., as well as requisite appropriations to other heads of accounts decided upon by the directors. To this amount of Rs. 87,447 must be added the balance of Rs. 11,955 brought forward from last year's accounts making a total of Rs. 99,402 available for distribution. The directors recommend disposing of this amount as follows:—To payment of dividend for the year ended March 31, 1933, at the rate of 5 per cent. per annum payable less income-tax, Rs. 85,000. balance to be carried forward Rs, 14,403.

DEJOO TEA CO., LD.

Loss for 1932, £1,470. The Directors have transferred £2,000 from dividend equalization reserve and as £3,915 was brought in from the previous accounts £4,445 is now available for distribution. A dividend of 5 per cent. is recommended and £2,266 is to be carried forward. Floating assets, £42,138; current liabilities, £3,377. The crop amounted to 607,714 lb., which was produced at a cost of 10.42d. per lb. and realized an average price of 10.24d. per lb.

NIPPON YUSEN KAISHA CO., LD.

The gross profit for the half-year to 31st March, amounted to 7,022,209 yen (against 5,442,981 yen for the corresponding period 1931-32), from which has been deducted 4,283,964 yen (against 4,338,709 yen) provided for depreciation, 53,079 yen (against 60,906 yen) placed to insurance fund, 1,122,021 yen (against 1,134,909 yen) added to ships' structural repair fund, and 433,949 yen (against nil) set aside to meet depreciation of securities. The net profit for the half-year was therefore 1,129,195 yen (against a loss of 91,543 yen). Again no dividend is being paid, and after adding 60,000 yen to the legal reserve the balance carried forward is increased from 610,393 yen to 1,679,589 yen.

GINGIA TEA CO., LD.

Report relates to the year ended 31st December, 1932.

	£. s. d.
The Revenue Account shows a loss of ...	873 17 9
Adding Adjustment, Season 1931 ...	2 12 11
And Balance from Season 1931 ...	4,636 8 5
Gives a total of	5,512 19 1
From which has to be deducted:—	
Refund of Income Tax	50 8 10
Leaving a debit balance to be carried forward of	5,462 10 3

Season, 1932.—The outturn shows the small decrease of 5,318 lb. as compared with 1931, due to a severe drought in the early part of the Season. The loss on Revenue Account of £873 is entirely due to the general fall in prices ruling on the London Market, but it is hoped that the organised restriction of the crops of all producing countries will effect a marked improvement in this respect in the future. Expenditure shows the satisfactory saving of £3,007 as compared with the previous year.

Yield.—As compared with previous years, was as follows:—1932, 421,768 lb.; 1931, 427,086 lb.; 1930, 314,247 lb.; 1929, 407,104 lb.; 1928, 338,298 lb.; 1927, 380,460 lb.

Average.—The teas were disposed of as follows:—London Sales 357,722 lb. at 10.12d. per lb.; Calcutta Sales 63,274 lb. at 4a/11p. per lb.. Draft, etc. 772 lb.

NEW TERAI ASSOCIATION, LD.

Report covers the year ended 31st December, 1932.

Outturn.—For the season was 3,673 mds. 58 lb. as compared with an estimated crop of 5,000 mds. and 3,476 mds. 42 lb. manufactured in 1931.

A severe drought was again experienced during the early months of the season and heavy rain during the latter months of the year retarded growth considerably.

Of the crop 1,606 mds. 33 lb. were shipped for sale on the London Market, and the remainder was sold in Calcutta.

The average realised for the whole crop is equivalent to 4.402 annas nett per lb. as compared with 5.988 annas realised in 1931.

The improvement in the quality of the teas was again well maintained throughout the season, but unfortunately a dull market prevailed.

The following are comparative statistics of outturn and sales for the past three years:—

Year.	Outturn.	Sale average.
1930 ...	3,22,958 lb.	8.821 annas nett per lb.
1931 ...	2,78,122 ,,	5.988 ,, ,, ,, ,,
1932 ...	2,93,898 ,,	4.402 ,, ,, ,, ,,

The result of the season's working is a loss of Rs. 41,381-12-11 which, with the adjustment of 1931 Accounts and the appropriation of Rs. 50,000 from the General Reserve Fund, brings the amount at credit of Profit and Loss Account to Rs. 3,950-13-2 which the directors propose to carry forward.

The General Reserve Fund now stands at Rs. 90,000, but this will be built up again at the earliest opportunity.

Estimates.—For the current season provide for a crop of 4,500 mds. at an expenditure of Rs. 1,57,552, excluding commission to Manager and Assistant.

This Company has, however, agreed to participate in the proposed Restriction Scheme, and the above estimate is, therefore, subject to modification in the event of the restriction in crop being agreed to by the Industry.

CALCUTTA LANDING AND SHIPPING CO., LD.

Extracts from Directors' Report:

The Revenue Account for the Hundred and Fortieth half-year ending 30th April, 1933, shows a profit of Rs. 39,674-15-3.

After providing Rs. 19,446-9-7 for Depreciation and Rs. 4,335-5 for Extraordinary Repairs and Other Adjustments for the half-year, and after adjustment of the debit balance of Rs. 700-0-8 brought forward from the previous half-year, there remains Rs. 15,193 which the directors recommend should be allocated as follows:—

In payment of a Dividend at the rate of As. 2 per share for the half-year, free of Income-Tax Rs. 7,812-8, carry forward Rs. 7,380-8, total Rs. 15,193.

Business during the half-year under review has improved, and prospects are encouraging.

The Steam Launch "Roman" has been thoroughly overhauled and has passed the Survey of the Government of Bengal.

SHAHDARA (DELHI)-SAHARANPUR LIGHT RAILWAY CO., LD.

Extracts from Directors' Report:

Report relates to the half-year ended 31st March, 1933.

Length of Line.—The route mileage of line open for traffic at the end of the half-year was 92.50 miles. Date of first opening for traffic: Shahdara to Shamli 7th May, 1907; Shamli to Saharanpur 15th October, 1907. Mileage opened for traffic during the half-year nil. Gauge 2 ft. 6 ins.

Capital Expenditure.—The total Capital Expenditure to the close of the half-year was Rs. 49,13,110 plus Rs. 81,194 on stores, etc,, or Rs. 49,94,304 in all.

The Capital Expenditure during the half-year was Rs. 6,414.

Earnings.—Gross Earnings.—The Gross Earnings during the half-year were Rs. 4,87,650. During the corresponding period in 1932 they were Rs. 4,49,351.

The increase was Rs. 38,299, or 8.5 per cent.

Dividend and Balance.—The Directors recommended that the available balance be disposed of as follows:—Payment of a dividend of Rs. 3 per share, at the rate of 6 per cent. per annum free of Income-tax, costing Rs. 45,000, balance to be carried forward Rs. 5,98,241, total Rs. 6,43,241.

The dividends paid for the two preceding half-years were at the rate of 6 per cent. and 6 per cent. per annum.

(*Be Bright*).

2. Who are the most depressed—The untouchables, Congressmen or Indian businessmen?

3. Examine the state of mind of:—

(*i*) Sir Tej Bahadur Sapru immediately after reading the White Paper.

(*ii*) Sir Charles Innes after the announcement of the results of the last general election of the Burma Legislative Council.

(*iii*) Mr. Srinivasa Sastri soon after the announcement of the *personnel* of the third R. T. C. and the first (and, let us hope, the last) J. P. C.

(*iv*) The Simla Official on receipt of news of Mr. Gandhi's survival from the fast.

PART VIII-ESSAY.

"Sins of the children are visited on the parents". Write a short essay on this theme with special reference to the punishment of parents for the political offences of their minor children.

or

"You are presumed to be guilty unless you can prove your innocence at the nearest police *thana*." Illustrate this legal maxim with particular reference to Ordinances, parole orders and Chittagong index cards.

(*Continued from Page 47*)

tary of the Treasury a license pursuant to such regulations as the President may prescribe.

(*f*) When a code of fair competition has been approved or prescribed by the President under this title, any violation of any provision thereof shall be a misdemeanor, and upon conviction thereof an offender shall be fined not more than $500 for each offence, and each day such violation continues shall be deemed a separate offence.

AGREEMENTS AND LICENSES.

Sec. 4. Whenever the President shall find that destructive wage or price cutting or other activities contrary to the policy of this title are being practised in any trade or industry or any sub-division thereof, and, after such public notice and hearing as he shall specify, shall find it essential to licence business enterprises in order to make effective a code of fair competition or an agreement under this title or otherwise to effectuate the policy of this title, and shall publicly so announce, no person shall, after a date fixed in such announcement, engage in or carry on any business, in or affecting inter-state or foreign commerce, specified in such announcement, unless he shall have first obtained a licence issued pursuant to such regulations as the President shall prescribe.

REPEAL OF ANTI-TRUST LAWS.

The President may suspend or revoke any such licence, after due notice and opportunity for hearing, for violations of the terms or conditions thereof.

Sec. 5. While this title is in effect and for sixty days thereafter, any code, agreement, or licence approved, prescribed, or issued and in effect under this title, and any action complying with the provisions thereof taken during such period, shall be exempt from the provisions of the anti-trust laws of the United States.

Nothing in this Act, and no regulation thereunder, shall prevent an individual from pursuing the vocation of manual labour and selling or trading the products thereof; nor shall anything in this Act, or regulation thereunder, prevent any one from marketing or trading the produce of his farm.

Sec. 6. No trade or industrial association or group shall be eligible to receive the benefit of the provisions of this title until it files with the President a settlement containing such information relating to the activities of the association or group as the President shall by regulation prescribe.

SAFEGUARDS FOR LABOUR.

Sec. 7. (*a*) Every code of fair competition approved under this title shall contain the following conditions: (1) That employées shall have the right to organise and bargain collectively through representatives of their own choosing; (2) that no employée and no one seeking employment shall be required as a condition of employment to join any company, union, or to refrain from joining, organising, or assisting a labour organisation of his own choosing; and (3) that employers shall comply with the maximum hours of labour, minimum rates of pay, and other conditions of employment, approved or prescribed by the President.

(*b*) The President shall, so far as practicable, afford every opportunity to employers and employées in any trade or industry, to establish by mutual agreement, the standards as to the maximum hours of labour, minimum rates of pay, and such other conditions of employment as may be necessary in such trade or industry to effectuate the policy of this title.

MAXIMUM HOURS AND MINIMUM WAGES.

(*c*) Where no such mutual agreement has been approved by the President, he is authorised to prescribe a limited code of fair competition, fixing such maximum hours of labour, minimum rates of pay, and other conditions of employment in the trade or industry or sub-division thereof investigated as he finds to be necessary to effectuate the policy of this title, which shall have the same effect as a code of fair competition approved by the President under sub-Section (*a*) of Section 8.

Sec. 8. This title shall not be construed to repeal or modify any of the provisions of title 1 of the Act approved May 12, 1933, hereafter referred to as the "Agricultural Adjustment Act."

PROVISIONS FOR OIL INDUSTRY.

Sec. 9. (*a*) The President is further authorised to initiate before the Inter-State Commerce Commission proceedings necessary to prescribe regulations to control the operations of oil pipe lines and to fix reasonable compensatory rates for the transportation of petroleum and its products by pipe lines, and the Inter-State Commerce Commission shall grant preference to the hearings and determination of such cases.

(*b*) The President is authorised to institute proceedings to divorce from any holding company any pipe-line company controlled by such holding company which pipe-line company by unfair practices or by exorbitant rates in the transportation of petroleum or its products tends to create a monopoly.

(*c*) The President is authorised to prohibit the transportation in inter-State and foreign commerce of petroleum and the products thereof produced or withdrawn from storage in excess of the amount permitted to be produced or withdrawn from storage by any State law or valid regulation or order prescribed thereunder, by any board, commission, officer, or other duly authorised agency of a State.

Any violation of any order of the President issued under the provisions of this sub-section shall be punishable by fine of not to exceed $1,000, or imprisonment for not to exceed six months, or both.

(*Continued from Page 37*)

ideas with one and all. In the pending legislation on labour, Sir Frank would find that the information that he gathered during his stay proves most valuable. The Bombay Government urged the necessity for a training school in tanning in this presidency. Their suggestion was that the procedure recommended by the Hide Cess Committee of 1930, namely, of reducing the hide export tax from 5 per cent. to 4 per cent. and levying a 1 per cent. duty on exports to be used for research and other matters, should be implemented and that a training school should be established in Bombay with funds thus provided. Sir Frank Noyce promised to inform the Local Government on his return to Simla of the progress made by the Government of India in considering the Hide Cess Committee's proposals.

Sir Frank mentioned that at the conference of Ministers for Industries which will shortly meet at Simla, one of the proposals to be considered is the formation of a Council of Industrial Research on lines analogous to the Council of Agricultural Research.

The first consignment of silver to America in payment of Britain's war debt was made from Bombay on Thursday night. The P. and O. steamer *Rajputana*, which is sailing on Friday, will carry the silver to Japan, where it will be transhipped to a boat bound for San Francisco.

Nine thousand bars of silver valued at Rs. 1,46,49,457 were loaded on the *Rajputana* on Thursday.

The s.s. *Kaiser-i-Hind* also carried for London silver worth Rs. 13,76,168. The total value of silver exported during the week amounts to Rs. 1,60,25,625.

Bar gold worth Rs. 78,86,567 was exported from Bombay for foreign countries during the week ending Saturday, July.

The P and O mail steamer *Kaiser-i-Hind* which sailed from Bombay for London on Saturday carried gold worth Rs. 32,40,707 for London option New York, Paris or Amsterdam; gold worth Rs. 4,59,070 for London, option Paris or Amsterdam; gold worth Rs. 2,97,247 for Marseilles and the rest for London.

The *President Adams*, which left Bombay harbour for New York on Friday, carried gold worth Rs. 47,800 for Marseilles.

The total value of gold exported from Bombay since Great Britain went off the gold standard upto-date now amounts to Rs. 1,44,38,30,903.

WORLD OF INDIAN FINANCE

Friday, July 14.

After remaining extremely easy, credits were somewhat usable in the latter part of the week. Some business was reported at ¾ per cent. for inter-bank call money on Friday but the general quotable rate continues to be ½ per cent. There is no special reason to account for the steadying of monetary conditions in this part of the year. Nor were current week's developments calculated to cause any increase, worth mentioning, in the demand for funds. On the weekly Treasury Bills tender day, applications received amounted to Rs. 2.08 crores; tenders at Rs. 99-11-6 and above were accepted in full. Lower tenders were rejected. The total amount accepted was Rs. 1.44 crores. The average rate of acecpted tenders was Rs. 1-2 per annum as compared with Rs. 1-2-11 on July 4, and Rs. 1-2-7 on June 27. Three months Bills sold between July 5 and July 10 came only to Rs. 94.25 lakhs. Of the total sales of Bills, the Imperial Bank would appear to have taken a big slice. The Bank's investments show an increase of Rs. 66.46 lakhs in the week ended July 7; and, as Trade Bills, in this time of the year, are few and far between, the increase of Rs. 60.46 lakhs shown under Bills may also, possibly, represent a portion of the Treasury Bills taken up by the Bank. It would, of course, be not quite correct to show a part of Treasury Bills under Investments, and another portion under Bills Discounted. But as the statement issued by the monetary authorities in this country do not aim at enabling the public to have clear and correct ideas of developments from time to time ; and as, oftentimes, there is always the deliberate aim of "throwing dust in the eyes" of the readers, we, for our part, would not be surprised if it turns out that no strict rule is observed as regards the allocation of Treasury Bills under any of the two different heads.

Be this as it may, it seems to us obvious that apart from the interest taken by special quarters in three months Treasury Bills, the market as such could not have parted with any large sum of money—at any rate, the amount involved should not be such as to strain the resources of the banks. From the point of view of Treasury Bills, therefore, we do not see any reason to justify the slightly steadier conditions that prevailed in the money market this week-end. It is, probably, connected with the larger gold stocks in Bombay and with the heavier shipments that are expected this week. Gold has been steadily going up in price, being quoted at Rs. 31 on Friday. Though the exports last Saturday were on the small side, it is believed that quite a big parcel would be despatched by to-morrow's boat. The financing of the gold shipments is, possibly, the best explanation for the fact that money was more usable in the current week. An indication of the situation in the money market was afforded on the sterling tender day when applications at 1s. 6 1/16d., came to £1.65 millions as against £445,000 on July 5. The basis of allotment was 61 per cent. Only after we know the exact figure of gold shipments that leave to-morrow would we be in a position to say whether the preponderating proportion of the market's sales of sterling is in respect of export bills against gold. Meantime, it seems safe to assume that the banks, who had sold sterling to the Controller of the Currency on Wednesday, would have taken up the rupee payments almost immediately.

However, money has continued easy enough, and the sentiment of easy money has spread wide enough, to allow of a continued strengthening of giltedge prices. This upward trend, which became decidedly manifest just a fortnight ago, received further emphasis in the current week. On June 27, 3½ per cent. Rupee Paper was Rs. 80-6; at the time of writing the quotation is Rs. 83. 3½ per cent. 1947-50 New Loan has advanced from Rs. 90-12 to nearly Rs. 94. 5 per cent. 1945-55 has improved from Rs. 110-2 to Rs. 112-14. 4 per cent. 1960-70 at Rs. 97-6 to-day compares with Rs. 94-8 on June 27. Of the sums released from maturing loans in the earlier weeks, a good part was hesitating whether or not it should flow into the giltedge market. But the avenues of investment to-day are so few that hesitancy could not last long. In the last ten days, there has been substantial purchase of securities on *bonafide* investment account. It is reasonable to infer that a good part of this investment enquiry should be connected with the funds set free from maturing loans, as this class of money may be said to be especially earmarked for government securities. There has also been another interesting development. A kind of impression is prevalent that, at the present price of Rs. 112-13 or thereabout for 1945-55, there is not much margin for further appreciation. There has, therefore, been a quiet but steady transfer of

interest from 5 per cent. 1945-55 loan to 3½ per cent. New Loan. This accounts for the headier rise in the New Loan and for the utter scarcity of scrip. 4 per cent. 1960-70 has also been in great favour. In broad terms, it may be said that 3½ per cent. 1947-50 has been popular with banks and 4 per cent. 1960-70 with outside investors. As 3½ per cent. paper is, in the main, a speculative scrip, investors have not taken much interest. The result is that the rise in this stock has been much less marked than is usually the case.

While the rise, that has taken place in these two weeks, may be considered as more than justified by the technical position of the market, and especially by the fact that considerable sums have flowed into financial circles on account of redeemed loans, a word of warning must be uttered lest the rise is overdone in a manner that makes a heavy reaction inevitable. From the reports that we have received, we have reasons to conclude that for such appreciation as has taken place, *bonafide* investments are mainly responsible. Speculators have stepped in only in the later stage. To the extent that this appreciation of the fundamental situation in the market turns out to the correct, there is nothing to be worried over a somewhat rapid advance in prices. It is of the utmost importance that in any further accentuation of the upward trend, an over-bought position by speculators is not built up. Such over-bought position was one of the factors responsible for the *debacle* that occurred immediately after the announcement of the 3½ per cent New Loan. After that disastrous experience, we are all the more anxious that the present recovery should proceed on lines which will not have any setback calculated to disrupt the confidence that appears, at long last, to have revived. While we consider it our duty to utter this note of warning, we should, at the same time, express our definite view that, given a freedom from abnormal events, the future of rupee securities seems to be distinctly bright. One of the abnormal conditions of which we have to be apprehensive is unduly bearish reports from London. On the other hand, a factor of the greatest bullish significance is that on August 15, the market will be receiving Rs. 9 crores on account of the redemption of 1933-36 Bonds; another Rs. 4¼ crores will be released on September 1, on account of 1933 Bonds. Rs. 13½ crores, of which a considerable proportion must needs be invested in government securities, is so important a factor in the Indian giltedge situation that, in ordinary conditions, securities here could easily forge ahead, irrespective of the price of sterling securities. But these are times when the giltedge operators have burnt their fingers very badly and are, therefore, prone to respond to bearish influences more quickly and readily than to bullish influences. Subject to this need for general caution, we do not see any reason why the latter half of August should not witness a level in giltedge prices almost on par with the level in the pre-New Loan period.

The exchange market was fully steady with a firmish undertone. Quite a fair amount of export bills was showing, but at rates which banks would not take. The market is distinctly firmer for forward positions.

The closing rates are: 1s. 6 1/32d., with 1s. 6 3/16d., available for July-December T.T.

Bills may be quoted: 1s. 6 9/16d., right up to December with probably 1s. 6 5/32d., for November-December. Full rates are being asked.

Call money has been slightly more usable at the close when business was done at ¾ per cent. Union rates for call, three days and seven days notice money was quoted ½ per cent. to ¾ per cent. Onemonth, twomonth and threemonth deposits were quoted 1s, 1/16 and 1/8 per cent. respectively.

OTHER INDIAN MONEY MARKETS

(From Our Own Correspondent).

(*By Wire*).

Bombay, July 13.

Money has been in slightly better demand this week. Inter-bank call money is quoted 1½ per cent.

The giltedged market is decidedly better. Pressure of continued cheap money has stimulated fresh investment enquiry and as a consequence both short-dateds and long-dateds have been in request. Rates have risen alround without attracting sellers. 4 per cent. 1960-70 continues to be scarce and the disparity between 4 per cent. 1960-70 and 3½ per cent. Rupee Paper has been wider now than before, in spite of the rise of 3½ per cent. Paper during the week to Rs. 81-12. Our market has moved up, despite continued easier advices from London. There are strong rumours of an early New Loan issue, possibly short-dated for 5 years. 5 per cent. 1945-55 is quoted Rs. 113, 4 per cent. 1960-70 Rs. 97-6 and 3½ per cent. Paper Rs. 82-12. We look for further improvement in prices provided there is no sensational setback in India sterling stocks.

(From Our Own Correspondent).

Karachi, July 13.

Exchange has been steady with sellers freely offering 1s. 6 3/64d. up to December. Buyers are demanding a rate better than 1s. 6 1/16d. for next year January to March and sellers 1s. 6 1/32d.

Three months Bills may be quoted 1s. 6 5/32d.

The bazar continues to be in need of funds to finance incoming crops and is prepared to pay 3 per cent. for two months credit. Banks are fully supplied and call money is available at 1½ per cent.

FINANCE ABROAD

Valiant efforts have been made during the week to move the World Economic Conference from the sands of "stabilisation", on which it had foundered. The differences which the gold and the non-gold countries had since the repudiation of the stabilisation agreement by Mr. Roosevelt having during these weeks developed into a serious conflict. Our Overseas columns give in detail the history of the moves and counter-moves, the negotiations and the failures that characterised the Air Mail week. Up to the moment of writing, there is no sign of an agreement having been brought about, which would be helpful to the further conduct of the deliberations of the World Economic Conference. At the end of last week, it was reported that the Bureau of the Economic Conference decided that the countries on the gold standard are not to take part in the monetary discussions "for the time being", which is understood to mean that there is no immediate stabilisation. The resolution of the Bureau reproduced below gives a clear idea of the position as it stood at the end of last week :

"Whereas the Bureau is firmly determined to proceed with the work of the Conference to the utmost possible extent and as rapidly as possible, and whereas, on account of the circumstances which have recently arisen, the gold standard countries find themselves obliged to declare that for the time being it is impossible for them to take part in any discussion of the monetary questions, the Bureau agrees unanimously : firstly, to request each Sub-Committee to meet as soon as possible to draw up a list of questions which can, in these circumstances be usefully studied, and secondly, to meet as soon as the reports of the Sub-Committees have been received in order to make recommendations as to the arrangements which should be made for further business of the Conference."

It should be remembered that this resolution was reached after the discussion in which Mr. Cordell Hull virtualy outwitted his opponents in argument. Enthused by Mr. Roosevelt's exhortation to preserve the Conference, Mr. Hull pointed out that the delegates had not even scratched the surface of the agenda but were diverted by stabilisation, which was not even on the agenda. He cleverly checked off the subjects which the gold *bloc* said they could not discuss, thereby throwing the blame off Mr. Roosevelt's shoulders on to the gold *bloc*. But Mr. Cordell Hull could only claim a debating success. For the gold countries were only too keenly aware of the attempts to circumvent their opposition. The Conference accepted on July 7 a resolution moved by Mr. Neville Chamberlain to adhere to the original agenda of the Conference with certain reservations. Mr. Chamberlain's speech on the resolution dwelt on the difficulty of the new task and proposed that they adhere to the discussion of the original agenda, without excluding any matter containing in it, but making reservations where unanimous conclusions were impossible. Mr. Couzens, the American representative, suggested two separate committees of "goldites" and non-goldites" to work on parallel lines. On the acceptance of Mr. Chamberlain's motion, the gold countries held a private meeting during the lunch interval at which they expressed their dissatisfaction at the manner in which their objections had been disregarded. On July 10, a conference of representatives of the gold countries met in Paris and decided to form a common fund "which will be flung into action on the market on whatever point speculation threatens to attack the gold countries". The Monetary Sub-Commission on Permanent Measures endeavoured to proceed with its work on the same day ; and here again M. Bonnet emphasised that his delegation's position was unaltered and that he did not think anything useful could be decided by this sub-committee until the Bureau has solved the question whether the Conference was ready to set terms to the fluctuations of exchange due to speculation.

It may be easily guessed that the fate of the Conference hinges less on the verbal debates between the goldites and the non-goldites in the Bureau or in the open conference than on the readiness of the Conference Sub-Committees to continue their work in the absence of any progress on the question of stabilisation. And here again it is a matter less of the inclination of the members composing the Committee than of the intrinsic difficulties of pursuing certain questions without the knowledge that the Conference is getting nearer to the end of currency and exchange chaos. If the Sub-Committees had been unanimous in their readiness to continue their work there can be little or no difficulty in saving the Conference as a whole. But it is clear from the despatches that there is no such unanimity among the committees and that some of them have been barely keeping themselves alive without doing any work. The Bureau of the Conference at its meeting on the afternoon of July 12 approved the report of the Drafting Committee recommending that the monetary sub-commission should proceed with the discussion of indebtedness and also take up the resolutions already adopted by the Sub-Committees on co-operation and the creation of central banks and to pursue through the sub-committee's examination of the silver problem and any other subject which might by general agrement be considered suitable for discussion. In spite of such brave decisions to keep the flag flying, there is now more talk of adjournment of the Conference than before. And it remains to be seen whether the Sub-Committees will secure enough co-operation amongst their own ranks and be able to present concrete decisions to their parent bodies.

From the accounts of the developments of the week, it is difficult to make any definite conclusion. It seems far better to rely on one's own understanding of the facts of the situation which the Conference and its committees are confronted with. Whether or not the non-gold countries are able to keep up the appearance of continued deliberations in the committees, it is certain that no definite progress will be made till the feeling gains ground that the question of stabilisation does not obstruct the path to the same extent as before. For such a feeling, as we have hinted already in the earlier issues of *Indian Finance*, nothing could contribute more than the depreciation of the dollar to the full extent desired by the American authorities. In this view, the slump in the dollar during the week is a more encouraging news than the debating triumphs of Mr. Cordell Hull or Mr. Neville Chamberlain. The dollar touched 4.79¼ on July 10 ; and at this level it is not far from the old ratio between the dollar and the pound. In our Overseas' Columns this week will be found a reference to the first signs of dissatisfaction in America at the continuance of a stable dollar and of the readiness on the part of the markets to regard stability of exchanges as more conducive to the consolidation of the ground so far gained than the continuance of the present uncertainty and instability. It will also be seen that the authorities in America were not so averse to stabilising the dollar as one might suppose from the manner in which the agreement was thrown overboard by the Administration. The fact of the matter would seem to be that a gentleman's agreement in regard to the elimination of speculation and the preservation of a reasonable stability was, indeed, concluded between France, Great Britain and the United States but that the latter made it a condition that no manner of publicity was to be given to it. For the Administration was only too keenly aware of the possible effects of rumours in this regard on the bounding markets at home.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 2 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3 per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 4 per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

COMMUNIQUES AND RETURNS.

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, July 11. The total amount offered was Rs. 2,08,00,000. Tenders at Rs. 99-11-6 and above were accepted in full and lower tenders were rejected. The total amount accepted was Rs. 1,44,25,000, the average rate of accepted tenders being Re. 1-2 per annum.

Tenders for Rs. 1½ crores of three months Treasury Bills will be received on Tuesday, July 18. Successful tenderers should make payment on Friday, July 21. Other conditions are as usual.

Three months intermediates will be sold from July 12 to 17 at Rs. 99-12 per cent. subject to the conditions previously announced.

Three months intermediates sold from July 5 to 10 amounted to Rs. 94,25,000.

STERLING TENDERS.

61 PER CENT. ALLOTTED AT 1s. 6 1/16d.

The Controller of the Currency notifies that on Wednesday, July 12 tenders to the amount of £1,650,000 at 1s. 6 1/16d. were received and allotted approximately 61 per cent.

On Wednesday, July 19, £1,000,000 will be offered for tender on the same conditions as previously announced.

WHY YOU SHOULD SHOP AT
CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE.

(From our correspondent).

Calcutta, July 13.

Jute.—This section opened quiet on Monday with Howrahs quoting Rs. 49-8 and Kamarhattys Rs. 480 but a steadier tone prevailed towards the close with Howrahs moving to Rs. 49-15 and closing firm at Rs. 50-8 and Kamarhattys being dealt in up to Rs. 489. On Wednesday, however, more interest was shown though business was on a small scale. Nationals were dealt in at Rs. 22-4, Reliance at Rs. 72, Kanknarrahs came to business at Rs. 453, and Clives moved up to Rs. 27-8. Anglo-Indias quoted Rs. 362, Bally Rs. 150, Barnagore Rs. 141, Belevedere Rs. 371, Cheviot Rs. 222, Empire Rs. 38-4, Hukumchand Rs. 17-8, Lansdowne Rs. 135, Fort William Rs. 254, Auckland Rs. 180, Craig Rs. 1-2, Presidency Rs. 5-10 and Reliance Rs. 72-12.

Coal.—On Monday there was good demand for Bengals which quoted Rs. 207, rising during the week to Rs. 210 with sellers. Burrakurs quoted Rs. 10-14, Pench Valley quoted Rs. 31-10, New Beerbhooms Rs. 8-14, Katras Jherria Rs. 27-12, Bhulanbararee Rs. 5-14, Talchers Rs. 1-10 and North Damudas Rs. 3-1. East Indians were marked up to Rs. 13-12 and Amalgamateds Rs. 12-15.

Government Securities.—This section was firm throughout the week despite the weakness in London. This upward trend still continues 3½ per cent. paper quoting Rs. 82, 4 per cent. 1960-70 loan had buyers at Rs. 96-14, 4½ per cent. 1934 bonds Rs. 102-7, 6½ per cent. Treasury Bonds 1935, Rs. 107-8, 5 per cent. 1940-43 Rs. 106, 5½ per cent. 1938-40, Rs. 107-8, and the 3½ per cent. New Loan changed hands at Rs. 93-7. The general tone, however was also firm and the higher prices touched by short-dated bonds brought out a few sellers and some business was transacted. The Bank rate remains unchanged at 3½ per cent.

Miscellaneous.—In this section prices were more or less unchanged the chief feature being a sharp fall in the price of Indian Standard Wagon (ordy.) which quoted Rs. 45-8, falling back later on to Rs. 39 ; British India Corporation had few buyers at As. 13, Midnapore Zemindary was easier at Rs. 65-8, Titaghur paper (ordy.) Rs. 14-6, Associated Hotels Rs. 3-4, B. I. Corporation As. 14, Bengal Telephone (ordy.) Rs. 15-10, Jubbulpore Electric Rs. 10-12, Indian Iron and Steel Rs. 4-6, Triton Insurance Rs. 169, Benares Electric Rs. 11-12, Britannia Biscuits Rs. 2-6, Murree Brewery Rs. 170, India General Navigation Rs. 99, British Ceylon Corporation (ordy.) Rs. 6-12, while in sugar shares Carew & Co., were a good feature quoting Rs. 15-8, Cawnpores were dealt in at Rs. 35, New Savan Rs. 16-4, Ryams Rs. 45-8, while Balarampurs were on offer at Rs. 11-10.

Banks & Light Railways.—Imperial Banks fully paids quoted Rs. 1,212-8 and the Contributories Rs. 310-8, and Central Banks Rs. 22-6. In Light Railways, Futwah Islampur quoted Rs. 73, and Darjeeling Himalayan (ordy.) Rs. 81.

Teas.—This section was firm with prices on the upward grade. On Tuesday, however, a small amount of business was transacted but the general tone was firm. Basmatias improved to Rs. 17-4, Dauracherras to Rs. 13, Eastern Cachar on the other hand were marked down to Rs. 10-12, Hattikhiras rose to Rs. 18, Hantaparas were better at Rs. 322, Sarugaon rose to Rs. 9-4, Naga Hills had buyers at Rs. 14-12, Hasimaras came to business at Rs. 33-4, Tengpani were dealt in at Rs. 14-8 while Sonai River improved to Rs. 15-2.

BOMBAY STOCK EXCHANGE

(From our correspondent).

(*By Wire.*)

Bombay, July 13.

Owing to bad monsoon, the buoyancy in the share market was suppressed.

Government securities evinced a decisively upward trend. During the first half of the week, India sterling loans declined but rupee securities remained steady. In the last three days, India sterling loans steadied and rupee securities have improved. 3½ per cent. Government Paper which stood at Rs. 81-8 on the 5th, after touching Rs. 81-1, have steadily advanced to Rs. 82-14-6, the highest level to-day.

Bank and insurance shares have been better in sympathy with the rise in giltedge. Imperial Bank fully paids have advanced to Rs. 1,235 and partly paids to Rs. 308. Bank of Indias are wanted at Rs. 104-8 and Bank of Barodas are quoted at Rs. 86-8. Central Banks are steadier at Rs. 22-4. New India Assurances were in request up to Rs. 24-8.

Steels and electric concerns have been spots of greater activities. Tata Steel ordinaries are quoted at Rs. 57 and Second Preference at Rs. 91. The expected dividend on Second Preference for the past year will be, it is expected, Rs. 5. Very encouraging reports of earning for the past three months are reported. Current year estimates warrant a full year's dividend on Second Preference shares. Steel shares look a promising speculation.

Keen demand sprang out for Bombay Telephone which came up from Rs. 82-8 to Rs. 89-8, though it closed at Rs. 87-8. Similarly, Tata Hydros ordinary recorded a straight rise from Rs. 154-11 to Rs. 159-6. Bombay Trams came down from Rs. 139-11 to Rs. 137-6 but during the last two days advanced sharply to Rs. 104-15. Andhra Valley ordinaries came down from Rs. 1,406-4 to Rs. 1,400, to rise again to Rs. 1,417-8. Tata Power ordinaries, likewise, eased to Rs. 975 from Rs. 977-8, to close at Rs. 995. Bombay Steam ordinaries remained quiescent closing at Rs. 288-2.

Despite steadier cotton, mill shares have refused to move up. Cloth prices are reported to be better though the offtake is very negligible.

Cements were inactive showing little change in prices.

The following table shows the fluctuation in prices in some of the important shares:

	Last close on 5th July	Highest	Lowest	Today's close

JUTE AND JUTE GOODS

JUTE.

The market during the week under review has ruled quiet but steady without much fluctuations. The highest and lowest for October futures was Rs. 33 and Rs. 31-8 respectively.

Since the publication of the preliminary forecast on July 4 very large business has been done in jute ready pucca bales, both in Calcutta as well as in London. The business locally was done near about Rs. 29. Such large business is not generally done except on special occasions. This has been a clear indication of the fact that genuine buyers have thought it desirable to take advantage of the close of the season, at a time when everybody in the market is obsessed by the idea of alarge crop for this season and has been for that reason fully bearish in his views and operations. Had the market not been so pressed by bear mentality, naturally there would have been a fairly good rise when so large a business was done. At the same time it must be remembered that, as reported last week, the market still holds the view that the preliminary forecast is an over-estimate. It is for this reason alone that the price of jute has not fallen to any appreciable extent after the publication of the report. The market touched Rs. 31-12 on the day of the publication of the report. Since them the values have been maintained between Rs. 32 and Rs. 33. The lowest touched was only Rs. 31-8 on Tuesday.

Towards the close there has been a small recovery and futures touched Rs. 33 this afternoon. Bears are a little bit nervous and the strength in other commodities including hessians have made them doubtful about the bear tone of raw jute. They are waiting to cover their blanks. Should the jute goods market show further strength, which it is likely to do, the bears will have to cover their sales. This is at the moment a bull point in the market.

The arrivals of old crop are showing a considerable falling off, while the new crop is not likely to arrive in good quantities, before the middle of next month, the opinion therefore has been that the jute market must see higher levels next week.

The following is the Consolidated Statement of the Preliminary Forecast of the jute crop, 1933, for Bengal, Bihar and Orissa and Assam. The forecast deals with estimates of areas only.

Revision of area for 1932—The total area for the three provinces has been revised to 2,143,100 acres, as against 1,899,300 acres given in the Final Forecast in 1932.

Area in 1933—The estimated area of jute in the three provinces is 2,479,800 acres, an increase of 336,700 acres, or about 15.7 per cent. as compared with the revised total for 1932.

The consolidated figures are as follows:—

Estimated area under Jute.	Bengal (including Cooch Behar and Tripura State.)	Bihar and Orissa.	Assam.	Total.
Preliminary, 1932 ...	1,638,900	157,000	107,100	1,903,000
Final, 1932 ...	1,845,700	170,000	127,400	2,143,100
Preliminary, 1933 ...	2,168,700	190,300	120,800	2,479,800
Difference between the preliminary forecast 1933 and final forecast, 1932				
Decrease ...	...	...	6,600	6,600
Increase ...	323,000	20,300	...	343,300

BENGAL CROP FAVOURABLE

Character of the season.—Rain fall in February facilitated preparatory tillage and early sowing in certain low-land tracts of East Bengal. In March and early April there was drought and sowings were delayed. Later good rain fell and sowings progressed freely in East and North Bengal. Wet weather at the end of May and in the early part of June made weeding somewhat difficult in some low-land tracts. In West Bengal the weather was generally favourable.

Present state of the crop.—The present state may be regarded as favourable, on the whole.

Stock.—Stocks of fibre from last year's crop are reported to be small.

On an average of the five years ending 1930-31, the area under jute in Bengal, to which this forecast relates, represents some 86.3 per cent. of the total area under jute in British India.

JUTE MANUFACTURES.

Early during the week the hessian market ruled very quiet partly due to weaker jute and partly due to liquidation. Hessians ready touched Rs. 10-12-0 and at that moment it appeared as if the market was going to collapse. But the further rise in American Cotton, a reaction in London-New York Cross rate, sharp rise in silver and steadier tone of grains and seeds had a very healthy effect on the market. Values began to gradually recover and short bulls again appeared on the scene. This was followed by a good business from Plate ports and consequently nine porters hessian touched Re. 1-7-0 to-day. The difference in the values of nine and eleven porters that was narrowing down due to the weak market again increased, on better enquiry for eleven porter hessians. There has been small sales reported by the mills at Rs. 14-7 for July but the stocks on offer were easily absorbed by the market.

The stocks and consumption figures of hessians in America have so far not been available and are anxiously awaited by the trade. Early in the week it was anticipated that the stocks will show an increase and consumption a decrease. Later information goes to show that the consumption is likely to show an increase. However in absence of authentic information it is difficult to say what the real position is.

The long holders have been able to dispose off a very good quantity of their holdings and the decreasing difference between ready and forward position have been an encouraging factor for the bulls. The sustained rise in the American commodity prices coupled with the lowness of stocks in Calcutta have been fully responsible for the steady tone of jute goods. The market at the moment appears to be looking up. The weakness of raw jute is less pronounced. It therefore seems that both raw jute as well as hessians tend to improve further.

The heavy goods market has not been so strong as that of hessians. Still, in view of the large stocks, the steadier tone that has been noticeable during the latter half of the week is satisfactory. Long interests are once again showing an inclination to buy and demand from consuming centres also is not wanting. If the market does not rise to any appreciable extent, it is not likely to see very low levels either. Buying at dips will surely prove beneficial.

COTTON AND COTTON GOODS

COTTON.

(By Wire.)

(From our correspondent).

Karachi, July 13.

On account of spectacular rise in American cotton prices, the cotton market here has been very steady, though the effect on price has been to a considerable extent offset by depreciation in the value of the dollar. Sind Desi is quoted Rs. 17-14 and Sind American Rs. 23-12.

The market during the week under review has ruled fully steady and the turnover of business has been fairly large. Broach April-May which had touched Rs. 221 has gone up Rs. 230.

The American Bureau report published on Saturday July 8 was bearish and the effect was already discounted by the market before its publication. Consequently there was not much of a drop in prices. The acreage under report is 40.79 millions of acres against 37.29 millions of acres last year on an increase of about 9½ per cent. According to private estimates the increase in acreage was not expected to be more than 5 per cent. and consequently the Bureau report was considered slightly bearish. But the bear effect has been more than counteracted by the news that farmers are more inclined towards the Wallace plan and that reduction in area by 6 million acres is contemplated. The net effect of all this was that the Chicago market, being slightly lower on the publication of the report closed only 3 points lower than the opening and since then the values are gradually improving.

Bombay market also took the Bureau Report in the same light. There was a small decline on Saturday, but as pointed out, the bear effect has already been discounted by the market. Consequently instead of a further decline the market showed an improvement. Short sales were covered, and long bulls who were waiting came out as buyers. New York lent support and in spite of doubtful views from Liverpool, the cotton market has well maintained its position.

The rise in New York markets during the recent weeks has been spectacular. The values of cotton have been pushed up from 6 cents to nearly 11 cents per lb. According to the plan of President Hoover the cotton price was to be brought to 12 cents. That aim is almost fulfilled, and people in the trade are desirous to know what next? Opinions in Liverpool have been pessimistic and it is considered that it will be difficult for America to maitain these high levels. On the other hand news from America is very encouraging. It is not that cotton alone had an isolated rise in values, but the pices of grain seeds, sugar, and other commodities have also improved in varying degrees. No doubt, the trade demand and consumption has not fully kept pace with the rise, and this has been a bear point at the moment. But the position as it devolops in the course of the next few weeks will determine the future trend of the market.

BULLION

GOLD

(By Wire)

(From Our Correspondent).

Bombay, July 13.

Gold rates improved, at first within weakening sterling franc rate, but later quietened down to a small extent. Shravan rate firmed up to Rs. 31-1 from Rs. 30-12-6 and stood at 6 p.m. to-day at Rs. 30-15-3.

The market during the week under review has ruled steady and local prices have gone up to Rs. 31-2. London prices have gone up to £6-4-6 and the London-Paris Cross rate has declined to 84.8 The arrivals of distress gold in Bombay is on an increase and stocks have amounted to about 5 lakhs of tolas. Daily off-take is poor and export of gold continues unabated.

Quotations are:—

London (Air Mail Week).

The market was very active with purchasers very keen. The amount of gold on offer in the open market continued to be substantial. While there were purchases for destinations not disclosed, the demand from the continent was very strong, and the premium over the franc parity has risen further.

The average of the quotations during the week was 122s. 2.67d.

Imports of gold into England far exceed the Exports, the amount imported during the week ended 26th June being £4.7 millions, while exports were £547,735 only.

The following were the United Kingdom imports and exports of gold registered from midday on the 19th instant to midday on the 26th instant:—

IMPORTS.

	£
Germany	742,802
France	239,802

SILVER.

Bombay, July 13.

(By Wire)
(From our correspondent).

Silver rates came down during the first half of the week as it appeared that the silver problem will be shelved in the World Economic Conference but later the objections raised by India have been removed and now an agreement between eight chief countries which possess or produce silver is in sight. The rate for Shravan in the local market came down from Rs. 57-8 to Rs. 55-12 and during the last three days rapidly advanced, being quoted at Rs. 57-7 at 6 p.m. to-day. Some further improvement might transpire.

Opening about Rs. 57 the silver market in Calcutta had a sharp decline during the middle of the week. The lowest touched for the first settlement was Rs. 55-6. The decline was due to heavy American selling on the London market. It must be remembered that for some time America was bulling silver heavily and China was selling it. Now the tide has turned. Long holders in America are reported to have sold in the London market and China and India have been buying it. As soon as American selling was over the decline stopped. It was immediately followed by the news that an agreement about future silver sales is likely to be arrived at. On receipt of this news the market had a sharp recovery on Wednesday when prices touched Rs. 57-12. At the moment the market appears to be steady and values are likely to improve further.

The stocks in Bombay and Calcutta are estimated at 11,000 bars with a daily offtake of about 30 bars.

The following are the quotations :—

Bombay.	Ready.	First settlement.	Second settlement.

Air Mail Week.

The market was very erratic during the first part of the week, the tendency being easy, as large offerings from America and re-sales by speculators were made in a market but weakly supported. Quotations had declined to 18 7/16d. for cash and 18 9/16d. for two months' delivery by the 24th instant, but at this level sellers were not very anxious to come into the market. Later, on demand from the Indian Bazaars and speculators, the market recovered with a sharp spurt and at the close the quotations for the respective deliveries were 19 1/16d. and 19 3/16d.

The trend of the market in the immediate future cannot be indicated with any certainty, as much depends on the course of speculative operations.

The stocks in Shanghai on the 24th instant consisted of about 127,700,000 ounces in sycee, 270,000,000 dollars and 6,480 silver bars, as compared with about 131,200,000 ounces in sycee, 270,000,000 dollars and 6,960 silver bars on the 7th instant.

The following were the United Kingdom imports and exports of silver registered from midday on the 19th instant to midday on the 26th instant :—

TEA.

Sale No. 5 was held on the 10th and 11th July 1933, when values were fully maintained. 13,527 packages for internal consumption and 2,164 packages of dust were offered for sale.

There was a strong general enquiry and values immediately showed an increase. Pekoes, Brokens and Souchongs were all in good demand. In Darjeeling teas standard of quality was below that expected at this time of the seasons.

Quotations were :

CALCUTTA

Branches at :
BOMBAY, MADRAS, ALLAHABAD, PATNA, DACCA

There was keen competition generally at firm rates. Common and low medium qualities were a farthing per lb. higher. Other sorts wer in sellers' favour.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 8d., to-day's auction 8½d. lb.; Common Broken Pekoe last auction 8½d., to-day's auction 8½d. lb.; Common Orange Pekoe last auction 8½d., to-day's auction 9d. lb.; Common Broken Orange Pekoe last auction 8¾d., to-day's auction 8¾d. lb.; Common Broken Pekoe Souchong last auction 8½d., to-day's auction 8¾d. lb.

The following are the value prices:—

Clean Common Pekoe last auction 8½d., to-day's auction 8¾d. lb.; Clean Common Broken Pekoe last auction 8⅝d., to-day's auction 8⅞d. lb.; Clean Common Orange Pekoe last auction 8⅞d., to-day's auction 8⅞d. lb.; Clean Common Broken Orange Pekoe last auction 8⅞d., to-day's auction 9d. lb.; Clean Common Broken Pekoe Souchong last auction 8½d. to-day's auction 8¾d. lb.

The following were the average prices of tea in the London market during the week ended July 6, compared with those of the previous week.

	Last week.	This week.
India Tea (Northern) ...	9.56d.	9.51d.
Indian Tea (Southern) ...	9.69d.	9.58d.
Ceylon Tea	11.16d.	11.49d.
Java Tea	8.03d.	8.24d.
Sumatra Tea	7.55d.	7.55d.

WHEAT.

Karachi, July 13.

The wheat market is strong on better foreign and Punjab advices. The market has gone up by a rupee since yesterday. The large stock position locally and the expected arrivals, however, militate against any sustained optimism as regards the future course of prices. Ready is quoted Rs. 27-2 and November Rs. 29-1.

During the week under review the market has ruled very steady mainly on the strength of foreign markets. Speculators have shown a good interest and there has been a fair rise in values both spot and September and May futures. The quotations are:

Calcutta (July 12)—

	Rs.	A.	P.
Cawnpore and Punjab Ready ...	3	9	3
September Beta	3	15	6
May Beta	3	15	6

London (July 11)—

Rosafe Parcels	25s. 6d.

Australian South parcels (July-August) ...	28s. 9d.

Chicago (July 11)—

July per bushel	$1.04½
Sept. ,, ,, ...	$1.07⅛
Dec. ,, ,, ...	$1.09½

LINSEED.

There has been a further rise in the values of linseed during the current week. There has been a good enquiry from the consuming centres. Reviewing the trend of the market some 8 weeks back that due to short Indian crop this year and the disparity then prevailing between plate and Indian linseed in U. K. markets the rise in the price of linseed was anticipated. A rise of about 8 annas per maund has already taken place since then and the tendency at the moment is for better prices.

The quotations are:—

Calcutta (July 12)—

	Rs.	A.	P.
September Beta	4	14	9
May Beta	5	0	6
Seed	4	12	0

London (July 12)—

Bombay July-August	£12 7/8

SIR BASIL BLACKETT. There is hardly any financial or economic information regarding India which does not find some place in the volume.

J. SCHUMPTER: All the more, economists all over the world must be grateful to you.

Price Rs. 5 only.

To subscribers of "INDIAN FINANCE" Rs. 3 only.

Rs. 4 for extra copies to subscribers.

The Managing Editor,

"INDIAN FINANCE," 20, British Indian Street, CALCUTTA.

Sir,

I send herewith Rs..... for of "Indian Finance Year-Book" on the basis of concession allowed to subscribers.

Name.....

Address.....

Daily quotations for T. N. shellac for the week ending Thursday the 13th instant are as follows:—

T. N. SHELLAC.

	July Dely.	Septr. Dely.
Friday the 7th July, 1933 ...	27/-	28/8/-
Saturday the 8th ,, ...	27/2/-	28/12/-
Monday the 10th ,, ...	26/6/-	28/-
Tuesday the 11th ,, ...	25/12/-	27/8/-
Wednesday the 12th ,, ...	26/4/-	28/-
Thursday the 13th ,, ...	25/14/-	27/10/-

Rates for weekly margin payments announced on Saturday the 8th instant are:—27/4/- July 28/12/- September.

Exports from and Imports into Calcutta during June.

	1933	1932
Arrivals (Tons) ...	1,388	1,904
Exports Packages ...	32,271	21,764

COAL.

The market remains very quiet with little new business passing.

The prices are nominally as follows:—

Victoria, Desherghur and Poniati Rs. 3-12 per ton.
Other Raniganj Rs. 2 to Rs. 2-8 per ton.
Super Selected Jherrias Rs. 3-12 per ton.
Selected Jherrias Rs. 3-8 per ton.
Other Jherrias Rs. 2-4 to Rs. 3 per ton.

FLOUR MARKET

Calcutta, July 12.

The market ruled quiet but steady. Following are the quotations:—

Qualities—	Rates per maund Ex. Mills Rs. A.		Rs. A.
Patent Flour	5 10	to	5 12
Superfine Flour	5 6	to	5 8
Household Flour	5 0	to	5 2
Soojee	5 6	to	5 8
Atta B.	5 2	to	5 4
Atta 2	4 10	to	4 12
Atta S.	4 9	to	4 11
Atta K.	4 0	to	4 2
Atta 3	3 1	to	3 3
Pollard	1 14	to	1 15
Bran	1 13	to	1 14

Rates quoted above include value of gunny bags.

FREIGHT.

Calcutta, Tuesday.

There has been no change in the quotations in the market during the week. Business was brisk and good booking has been done for South-American and continental ports.

There is a steady movement of freight for near steamers to U. K. and Continent.

LONDON, LIVERPOOL, DUNDEE, GLASGOW, MARSEILLES.

(Less 10% rebate not exceeding 5s.)

July to December.

Linseed 20 cwt.	27 6
Rice 20 cwt.	28 9

Hides Ars. Buff 17 cwt.	50 0
Hides Ars. 14 cwt.	60 0

43-9—Italian Ports.

DUNKIRK (less 5% rebate).

Jute 50 c. ft. ... July-December ...	35 6

SUEZ, PORT SAID.

Gunnies, July-Dec. 50 c.ft.	25s. 0d.

BOSTON, NEW YORK, PHILADELPHIA AND BALTIMORE.

(Contract Rates 1933).

Jute 40 c. ft.	$7·25
Gunnies 40 c. ft.	$8·00
Shellac in Bags 13 cwt.	$8·75
Tea 50 c. ft.	$10·50
Skins in Bales 16 cwt.	$15·50
Skins in Casks 20 cwt.	$9·25

PACIFIC PORTS (AMERICA) AND VANCOUVER.

July to December 1933.

Gunnies 40 c. ft. $37.50 Tea (1,000 lbs.) ...	$9.56

HIDES, SKINS AND LEATHER.

(By Our Correspondent).

Calcutta, July 14, 1933.

Hides and Skins prices continue steady while the stocks available in the market are moderate. Demand for best quality Wet Salted Cowhides is keen and whatever supplies are received are readily taken up at about four annas per lb. (wet). The Madras tanned cow-hide market has remained steady. The Indian shippers of tanned hides have made large clearances from the ready stocks available, consequently the tanners have increased their output with the result that the demand for raw hides from the Madras tanners has not slackened. Stocks of raw hides in the Calcutta market are being steadily cleared. The increased prices obtained for the goat skins are inducing larger supplies, which are also being regularly taken up by shippers. The price for wet salted buffs are also steady and heavier qualities are being quoted up to Rs. 2-6 per lb.

To-day's prices for hides and skins in the Calcutta market may be quoted as follows:

	Per 20 lbs. Rs. A.		Rs. A.
Cow Hides.			
Dry framed Agras	7 0	to	8 8
Darbhangas	4 12	to	5 8
Patnas	4 0	to	4 8
Dry Salted	4 8	to	4 12
Buffallo Hides.			
Dry Arsenicated	3 8	to	4 0
Goat Skins.			
Good Quality	125 0	to	170 0
Ordinary	90 0	to	125 0
Rejects	45 0		

Leather.—Local demand is very poor. Despatches to up-country have also not been satisfactory for the last fortnight. Production was also less on account of drying difficulties. Chinese chrome tanned cow upper leather continue to sell at about 13 pice to 14 pice per square foot.

THE STANDARD WAGON COMPANY, LIMITED.

NOTICE

is hereby given that the Fourteenth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Tuesday the 25th July, 1933, at 11-0 a.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance-Sheet for the year ended 31st March, 1933, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 18th to the 25th July, 1933, both days inclusive.

By Order of the Board,
BURN & CO.,
Managing Agents.

Calcutta,
The 14th July, 1933.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

SUGAR CONFERENCE.

The Sugar Conference, that was held this week in Simla, may be said to have had significance from the agricultural, rather than the industrial, point of view. As the captains of industry in India have, in most part, succeeded in getting whatever they ask for, it was but natural that they were ready with a few more demands to be put forward at the Conference. But there has been a general feeling prevalent in all quarters that sugar manufacture is the one industry in this country to which complete and adequate protection has been provided by the State. The capitalists, that took part in the Simla deliberations, were, therefore, unlike the industrialists on other occasions in that they had no particular grouse or grievance for which imperative redress should be peremptorily demanded. If, however, the industrialists allowed the varied interests in the Conference to get away with the feeling that everything was as happy as it could be, they were afraid that this might result in an inopportune thrusting forward of the proposal for the levy of excise duty. To have a look of contentment is to invite the unwelcome attention of the tax-gatherer. It was, from this point of view, politic for the industrialist to say that while things were not bad, they might get worse any moment; that while the protection was adequate, many of the assumptions of the Tariff Board had gone away, particularly in regard to the prices realisable for molasses; and that while those who had shown enterprise up to date should be commended, enterprise by promoters of companies in the future should be deemed a serious hazard. In regard to all these matters, we are, more than ever, convinced that the gloomy anticipations of those who have been fortunate enough to be the first in the field are a little overdone. There is, in fact, no justification for taking a pessimistic view of the sugar industry.

* * *

Mr. R. C. Srivastava, the Sugar Technologist with the Imperial Council of Agricultural Research, made, in his recent review of the sugar industry in India for 1931-32, a forecast of the annual production and consumption of sugar up to 1934-35. In that forecast, it was shown that production in 1934-35 might come to exceed consumption by 6,000 tons. The estimated figures, which he furnished in the review, were accompanied by a word of warning in the following terms :

> "The rate at which the sugar industry has been developing during the last two years has recently become too fast to be healthy. In view of the statistical position disclosed above, considerable caution and restraint are necessary in connection with any further extention of the industry, if it is to be saved the fate of jute, rubber and a number of other industries which are now suffering from the ill-effects of over-production".

This statement has been pounced upon by the various sugar manufacturing interests, for purposes of propaganda for dissuading new enterprises in this field. We examined Mr. Srivastava's figures in our article on sugar in the *Industries Supplement* published in June; and we came to the view that the forebodings of Mr. Srivastava were premature if not unwarranted. As much capital had been made by interested parties in the way of damping the ardour of investors towards new enterprise, we think it necessary to say, with all emphasis, that the rate of progress is not excessive. We are rather worried about the lack of plans, the lack of adequate reference, of business experience and careful appreciation of the possibilities of over-crowding in any one centre, that characterises a good many of the new entrants to the sugar field. In order that the public may not succumb to the panicky effect intended to be produced by the propaganda carried on in this behalf, we may restate our opinion as under :

> "As for the fear that the production of sugar in India would exceed consumption, we should not forget that over the past 15 years there has been manifest a marked increase in the consuming capacity of the population for sugar. This consuming capacity received a check in the extreme economic depression that has been prevailing for three years. As soon as there is a betterment in economic conditions, and as soon as the masses have increased purchasing power, the consumption of sugar in India must start showing substantial increase. To argue that on the present basis of restricted consumption, the heady expansion that has already taken place and that is bound to take place would exceed demand would be inaccurate. The present is an extremely abnormal period so far as the purchasing power of the masses is concerned. We do believe that while there should be caution and discretion in the plan, structure and working of the new companies, we do not see any reason to join in the warning of the Government Technologist that no more concerns should be started. The field of Indian sugar companies is not yet over-crowded. There are certain parts where it is not only possible but desirable that enterprising capitalists should start new ventures. The lesson of the past is not against any more flotations but in favour of well-conceived, well-planned and well-working enterprises".

Our view as expounded in the above extract is borne out by the arguments and statistics contained in the special papers submitted to the Sugar Conference, curiously enough, by no other person that Mr. R. C. Srivastava. He calculates that the total quantity of sugar, excluding *gur*, consumed in India during the ten years ended March 31, 1933, was 678,081 tons in the first year, rose to 1,324,923 tons in 1929-30 and was 928,095 tons in 1932-33. His apprehensions as regards overproduction are based on the consumption figures of the year 1932-33. If, however, 1929-30 were taken as a more normal year for purposes of study of the trends and tendencies over a period of years, it will be easily seen that there is ample margin for further production of sugar in India. In fact, another thirty factories could be started, without causing any upset in the technical position of the trade. In another context, Mr. Srivastava shows that while the purchasing power of the people as indicated by the index number for food grains has recently fallen by 52 or 55 per cent. and the level of prices of commodities in general has fallen by 42 per cent., the price of sugar has, during the same period, fallen by only 20 per cent ; and this, he argues, explains the fall in sugar consumption during the past three years. His remarks in this connection are worthy of careful attention :

> "It will be observed that the consumption of sugar reached the highest point during 1929-30 and 1930-31 when the prices were the lowest. It may be assumed therefore that if prices were to go down again the consumption may increase. A drop in prices may take place in the case of imported sugar if the revenue surcharge on imports were withdrawn, or if Holland went off the gold standard.
>
> "In the case of sugar made in India, which has lost its parity with Java sugar during the past year, there is every prospect of a sharp decline in prices when the four dozen new factories under construction this year commence manufacturing during the next season".

When any particular industry applies for protection, the argument is advanced that internal competition as amongst the larger number of factories that will be ushered into existence by the increased protection will bring down prices and thus result in the safeguarding of the interests of the consumers. This means that from the point of view of the consumer,

a plea for the cessation of activity in regard to new enterprises for sugar manufacture would have harmful effects. As it is, the present price of sugar affords an ample margin of profit for the manufacturer. The latter need not be worried if there is some shrinkage in the prices as a result of greater competition. Even after such a fall in prices, the industry would still continue to be on a paying basis. The bogey of overproduction need be raised only when there are good grounds for fearing that the competition will become so sovere as to reduce the price of sugar to a level which leaves no margin of profit whatsoever to the sugar producers. At the present moment, there is no justification for any such apprehension.

* * *

While the industrialists have been most anxious to safeguard their own interests in every way, they have not shown a like solicitude for the sugarcane growers. Mr. Srivastava has made detailed calculations which show that the price paid to the growers is much less than what should be considered as his due. Mr. Srivastava's reasoning in this connection deserves the widest publicity:

> "Under the present market conditions the total sale proceeds (allowing no credit for molasses) of a maund of sugar amounts to Rs. 9-5-0. Deducting Rs. 2-11-0 for manufacturing expenses, depreciation and interest on working capital, the balance available for paying for cane and manufacturers' profit is Rs. 6-10-0 per maund.

Paying for Cane.

> The Tariff Board considered 10 per cent. profit as adequate. This amounts to Rs. 0-13-8 per maund, and, after deducting this, the balance left for paying for cane is Rs. 5-12-8. With a recovery of 9 per cent. sugar on cane if the whole of this amount of Rs. 5-12-8 were to be paid for cane, the price per maund cane will be Re. 0-8-4. Actually, the factories are paying about 6 annas for cane, or 2 annas 4 pies less than the calculated figure.
>
> "It may be pointed out that on the basis adopted by the Tariff Board, out of the total sale proceeds of Rs. 10-0-5, the amount available for paying for cane is Rs. 5-8-10, the ratio between the two figures being approximately as 10 to 5.5. If cane were to be paid for on the same proportionate basis, under present market conditions, the amount to be paid would be.....Rs. 5-2-6, which works out at Re. 0-7-5 per maund of cane, or Re. 0-1-5 more than the present price."

The Hon. Mr. J. P. Srivastava, Minister, United Provinces, in the course of a special memorandum presented by him at the Conference, asserts that "in some cases factories are giving absurdly low prices for the sugar cane which they purchase." In the majority of cases, the price paid by a factory does not reach the grower; the latter gets a very small amount while the contractor makes big profits. The Hon. Minister of Education of U. P. has made out a strong case for a more careful consideration of what is due to the agriculturists in the *regime* of substantial protection afforded to the sugar industry. Mr. J. P. Srivastava is to be congratulated on the bold and clear stand he has taken on behalf of the consumers.

> "Sugar factories owned largely by capitalists from outside the province are reaping big profits at the expense of the well-being of the grower, at the expense of soil fertility and at the expense of the future of the industry and the welfare of the country as a whole. There can be no justification for retaining the tariff unless the growers can get a reasonable share of the profits which are going to the factories."

This is the issue which the Simla Conference should have tackled. The press reports do not give us any assurance that any concrete measures were decided on for relief of inarticulate agriculturists. Mr. J. P. Srivastava may, however, be relied on to pursue, and keep pursuing, this matter till justice is done to the *raiyats*.

ECONOMIC PLANNING IN U.S.A.

Events are tending to invest the economic programme and policy of the American Government with a daily increasing importance. It is natural that the vigorous efforts of a nation so largely self-sufficient and so advanced as the United States of America should be regarded with a wistful interest all over the world. But the circumstances, in which the policy was initiated, and the announcements of Mr. Roosevelt in and about the time of his accession to the Presidency encouraged the world to believe that Mr. Roosevelt was not thinking only of America's insular national interests. It is true that the devaluation of the dollar, which was the sensational beginning of the new economic policy, held out a formidable threat to many things which are dear to the world of businessmen and economists. But what time Mr. Roosevelt dramatically decided in favour of devaluation, he also summoned the representatives of foreign nations for an intimate chat on the questions concerning the World Economic Conference. The effects of the depreciation of the dollar on the course of business and prices in America were also very marked, and the rise in prices was not confined to the United States. What is even more important than all this, the improvement was not confined to prices. Industrial production was making marked advances and with it the volume of employment. This revival, if one is inclined to regard it so, is part of a general improvement in business conditions all over the world. And the distinguishing feature of the last two, three months is the wide-spread talk about the end of the depression and the beginning at long last of the revival.

* * *

It is at this stage that the American Government decided to interfere more actively, and at more than one point, in the conduct of the national economy. The session of the Congress, which closed recently, is remarkable for the output of new legislation affecting the fortunes of trade and industry. In our Overseas columns our Correspondent has sketched from time to time the progress of such legislation; and here it may be useful to survey the whole programme. The basis of the whole programme is the inflationary movement. Though the devaluation of the dollar was, no doubt, an abrupt development, sentiment in favour of inflation is of much longer standing in America. Its first victory was signalised by the passing of the Glass Steagall Act, though this may be reconciled with monetary orthodoxy, in as much as it was only an attempt to provide for the shortage of eligible commercial paper necessary for expansion of credit and to increase the amount of free gold by 1,000 million dollars. The swing from this to the extreme view of not only a lower, but also an unstable, dollar under the aegis of a monetary dictator in singular contrast to the rigid provisions of the Federal Reserve Act is due to the progressive deterioration in the American financial structure. What America witnessed in Europe in 1931 she was herself suffering at home in 1933. The economic crisis had deepened everywhere into a financial breakdown. The very attempts to repair the financial structure had resulted in a further accentuation of weakness. The activities of the Reconstruction Finance Corporation, which were intended to help the banks, pushed them into a deeper crisis of confidence. The bank failures of March last left no room for doubt that, unless the load of indebtedness was lightened, America would have to face widespread insolvency. The rise in prices, which was at first deemed desirable as a means of return to prosperity, had by then become the indispensable means of ordered existence. Inflationary sentiment gained such a fillip that Mr. Roosevelt and the Administration had all of a sudden to yield to its pressure. Inflation was let in through the backdoor in the form of an amendment to the Farm Bill.

* * *

In the present context we are concerned less with the details of each legislation than with their relation to each other and their significance to the future of American and world economy. With the quickness for anticipating sure developments of the future,

which characterises the speculative classes in America, prices had perforce to jump up. And the question naturally arises for the Administration, whether they were going to allow another era of anarchy in American economy, the more dangerous because it was artificial. The incidence of increasing prices as well as the actual state of agriculture and trade made it necessary for the Government to evolve some sort of plan in the economy of the nation, and it is to these haphazard developments that the present plan in America owe their origin.

* * *

Before appraising the actual results of the American plan, it would be useful to grasp the essence of the main proposals. As mentioned already, the first is the lower dollar with a regrettable, if somewhat necessary, emphasis on instability. Tacked on the inflation is the question of silver. We outside America, at any rate, can put it down more to the political influence of the silver interests than to America's enthusiasm for the revival of the purchasing power of the Far Eastern countries, with which the silver question is always sought to be connected. But whatever the motive, one not unimportant offshoot of the American economic programme is the rise in the price of silver, with all that its signifies to the future of world economy. But in the American plan itself, it cannot occupy any definite or organic place. Next in importance only to inflation, comes the Farm Bill, of which the inflationary provisions are only but a part. Taking the entire scheme of the American Government in regard to agriculture, it may be said that the purpose of the Government is to engineer a rise in prices and to lighten, in more than one sense, the burden of agricultural indebtedness. The relief, which the agricultural debtors will automatically secure from a rise in prices, ought not to mislead one to think that nothing more direct or intimate is attempted. Firstly, a rise in the price level is, in the sense in which all economists will really appreciate it, tantamount to lightening the debt burden. Secondly, a rise in prices of farm products is a direct benefit to the agriculturists and in so far as such a rise may exceed a rise in general prices, the farmers stand to make an additional gain. Thirdly, by evolving new plans of refinancing agricultural indebtedness the Government would be conferring an alround benefit on the farmers through the reduction of pressure from creditors, and, may be, through a cut in the amounts owed; on the bankers through the unfreezing of credits; and on the country, generally, through the restoration of free circulation of money and other media of exchange. Fourthly, the Government might ask for special inducements to the farmers for taking to measures like restriction of acreage which, though they might ultimately redound to their own advantage, are certain to be looked with disfavour at the outset. The American plans in regard to agriculture are framed with a view to explore all the paths of agricultural revival. Inflation and, even more potently, the threat of inflation have taken prices to greater and greater heights. The refinancing of agricultural mortgages is already reported to be in good progress. As for restriction of acreage and similar measures, the Secretary for Agriculture has, under the Farm Relief Act, dictatorial powers comparable only to those of the President under the the Inflation Amendment of the Farm Bill. But what the agriculturists would welcome is the readiness of the Administration to offer compensation to them for reduction of acreage. The Air Mail letter of last week affords the information that the Reconstruction Finance Corporation has granted 70 million dollars for financing the reduction of acreage. Whether the authorities will change their mind at the last moment, at least in regard to wheat, in which case, it is stated, the present crop has been damaged beyond repair, is at the moment difficult to say. But cotton and other commodities are bound to reap substantial benefits from the scheme that has already been set afoot by the Secretary for Agriculture.

* * *

The agricultural relief indicated above, though, no doubt, of great importance in the present state of the world's primary products, is by no means a departure from the traditional policy of the States. For the Federal Farm Board has endeavoured during the last few years to render the same services, though in a much more crude and general way. But in the sphere of industry, Mr. Roosevelt's Administration may claim to have made very revolutionary changes of policy. These departures are due to the recognition of two important truths, one, the dangerous disequilibrium between production and consumptive demand as distinct from consumptive capacity and, two, the danger of its being accentuated through a rise in prices, unaccompanied by an increase in the income of the masses of the population. While normally the disequilibrium may not provoke any widespread resentment, its accentuation through an artificial raising of the price level is bound to involve the Administration in serious unpopularity. Mr. Roosevelt, therefore, decided that a necessary complement of the measures of inflation and farm relief, is a more rational regulation of industry. Hence the Recovery of Industry Act, the more important provisions of which were reproduced in an earlier issue of *Indian Finance*. The Act aims at the elimination of dangerous and economic competition among the producing units in an idustry and disputes between employers and employees regarding wages, the two factors that are most inimical to the stable progress of modern industry. The Act, therefore, provides for the imposition, or adoption by voluntary agreement, of codes of fair competition, which should comprise stipulations of minimum wages and maximum working hours and rules of competition between competing units. The procedure in the case of industries voluntarily formulating their own codes of fair competition and in the case of those calling for the imposition of such codes by the Administration is specified in detail in the Act. At the time the inflationary policy was first decided on the President issued an appeal to all employers to help the Administration in its efforts towards recovery by liberal increases in wages. Loyal response was no doubt, made by many employers; but with the passing of the Recovery of Industry Act such action has become obligatory. General Hugh Johnson, the Administrator appointed under the Act, declared a month ago that unless industries get their codes of fair competition approved within the next few months the present efforts at revival might be greatly jeopardised. The steel industry welcomed the Act, as in its case there was no chance of survival, not to speak of a revival, without the limitation of competition. The cotton textile industry has also, it is reported, formulated its code; and the latest reports available indicate serious differences over wages and hours which have been, for the present amicably settled.

* * *

It is about the success, and the repercussions on the outside world, of such a vast plan that it is now necessary to attempt to form an opinion. The immediate effects of this plan are, the continued fall of the dollar, a more than proportionate rise in dollar prices at home, with a virtual boom in the share and commodity markets, an increase, not inconsiderable in itself, in wages and employment, and, lastly, a marked expansion of production. It is only the first two that are of immediate significance to the foreign nations. Those, who, like ourselves, do not believe in the possibility of the World Economic Conference being able to do much for world trade, will not condemn the instability of the dollar as the greatest stumbling block to the progress of the Conference in London. It does not seem quite obvious that, if the

stabilisation agreement had been accepted by Mr. Roosevelt, the Conference would have gone forward from one triumph to another. If the prospects of world revival through agreement at international conferences are not bright, the world has reason to feel grateful to America for showing the way to recovery. With the currencies devalued and gold clauses repudiated, the dead weight of an overgrown indebtedness will at last have been thrown off the shoulders of world economy. Few who discuss American monetary policy realise the difference between the British devaluation and the American devaluation, so far as commodity prices are concerned. Britain, as a principal consumer of raw materials and foodstuffs, should, and did exercise a depressing effect on world prices through the depreciation of her currency. The United States, as the biggest producer of world's primary products, exercises a big pull over prices. When Mr. Roosevelt, in his statement to the World Economic Conference, urged that, if other countries contrived to raise their price levels, there would be no need to protest against the depreciation of the dollar, he was not only defending his action but indicating a reliable path towards revival. One other important feature of the American plan is the frank recognition of the need for corporate action in order to preserve the balance between production and demand. It was reported that General Johnson is nervous about the recent increase in production outstripping the increase in wages and employment. A statement like this is an epitome of the lessons of the depression, and it is only to be hoped that they will not be forgotten when the pressure of the present position is relaxed.

THE EMPIRE OF INDIA LIFE ASSURANCE CO., LTD.

We find that certain errors found their way into our review of the Balance Sheet of the Empire of India Life Assurance Company for the year ended February, 28, 1933, in our issue of the 20th of May, 1933. Of the Stock Exchange securities held by this company, we understand that as much as 99.5 per cent. are in terminable loans and not 80 per cent. as stated in our review referred to above. The increase in the Reserve Funds amounted to approximately Rs. 3.9 lakhs and not Rs. 17.2 lakhs.

hospitality and to inspect the *Statesman's* building and plant and machinery. And all of us had an entertaining and edifying time during the two and a half hours we spent in the *Statesman's* new premises. Thanks to Mr. Matthews of Messrs. Ballardie, Thomson and Matthews, I had, for my part, paid two visits to the building on earlier occasions with a view to clarify ideas as regards flooring, roofing, style of stair-case and lift, fittings and fixtures and a hundred other details in connection with the new puilding proposed to be erected by the United India Life Assurance Company of Madras in the same vicinity. But to be escorted by Mr. Arthur Moore and Mr. H. E. Watson and the other members of the staff through every section of the building and to be shown the working in all its interesting phases was real education. The Editors of over a dozen papers—*subjantawallas* as editors in this country always are—found that there was much to learn from the impressive example which the *Statesman* has set as regards the production of a modern newspaper with a hundred per cent. efficiency. As kids, we had looked on with wonder as the tiger and the lamb lapped milk from the same saucer in the circus show. I had an almost similar feeling as I sat gazing on the Editors of *Liberty*, *Advance*, the *Patrika* and the *Statesman* partaking of a neatly sumptuous fare round the same table.

* * *

This set me athinking. Why not make this tiger-and-lamb-drinking-from-the-same-dish a more frequent affair—a permanent institution, in fact? I do feel that if a Press Club, in first-rate style, were started in Calcutta where wielders of pen could meet in leisure hours, greater good and more marked good humour would prevail as amongst journalists. The Club, well conducted and liberally patronised by one and all, should drive away all the rancour that afflicts the writings in the daily press. While the editor of *Liberty* is busy coining new and stinging phrases for spscial use on the editor of *Advance;* and while the editor of *Advance* is no less excited over reciprocating the compliment; while the editors of both spend the rest of the time thinking of all the nasty things they could say of the *Statesman;* and while the editor of the *Statesman*, not content with saying all that is nasty, seeks the home addresses of the rival editors, the reporters of *Liberty, Advance* and the *Statesman* live and carry on their work in mutual esteem and affection, sitting round the same deal table in the Police Court, drinking the same half-anna cup of tea, and exchanging notes and stories without any thought of jealousy or craze to steal a march over the compeers. If the deal table in the Police Court and the *Cha* could prove so great a cementing influence, what may not a *chic* and comfy Press Club do? Such a Club must be liberally supported by newspaper proprietors; the membership fee must be kept at a low enough figure to be within the reach of the rank and file. On behalf of *Indian Finance*, we should be prepared to pay a donation of Rs. 50 per mensem for one year for the establishment of a Press Club and for the promotion of cheer and conviviality amongst those who, by control of the press, guide and mould public opinion and should, therefore, cultivate the broad outlook and a due and a proper sense of humour and proportion. Any response?

* * *

[*Aside.*—Much more than *cha* should be available at the club.]

FRANCE REPAYS BRITAIN.

An important development of the week in international finance is the announcement of M. Daladier, the French Premier, in the course of an important speech in the *Chamber de Deputies,* that half the British Loan of £30,000,000 would be repaid by the end of July. It will be remembered that this credit was granted to the French Treasury at the end of April by a group of British banks headed by Messrs. Lazard Bros. It was for a period of six months with option to the French Treasury to repay it in part or whole at the end of three months. That the French Treasury has chosen to exercise that option is a sure indication of the improvement in the revenue collections since the credits were first contracted. M. Deladier has afforded the information that the revenue returns for May were 805 million francs compared with 364 million francs in May, 1932. The French banks, whose lukewarmness to the needs of a Treasury living on short term credits drove the Government to the London market, might feel that their action has had a wholesome effect on the financial plans of the Government. As, however, the improvement in the financial position is not sufficient to justify repayment before the due date, one might wonder whether the proposed action of the French Government betokens a desire to free itself from embarassing obligations to Great Britain, especially when, as a result of the difference over the question of stabilisation, the relations between the two countries are not over-cordial. For it will be remembered that at the time the loan was contracted, the French press criticised it as involving obligations to a foreign power at a time when France might have to take up her own line at the World Economic Conference. M. Deladier's reference to the cordial relations with Great Britain, it is to be hoped, is more sincere than such official statements usually are.

WORLD ECONOMIC CONFERENCE

NEWS OF THE WEEK AND AIR-MAIL WEEK

(From Our Special Correspondent.)

(*By Cable*).

London, July 14.

The World Economic Conference is barely keeping up the appearance of continuous work. The wrangles between the gold and the non-gold countries have deprived the proceedings of the little touch with reality they had in the earlier stages. If it is true that an international conference is live only when there is a little strain in the relations and a touch of bitterness in the speeches, the French have done something to enliven the Conference which is all but dead, as their motion on public works was vehemently opposed by Mr. Runciman. The Irish went one better when Mr. Connolly adduced one instance of an utterly indefensible barrier to trade, and drew on himself the strictures of the Chairman, as if to suggest that the Conference concerns itself only with tariffs which have a shadow of economic reason! The Committee on Tin solved its problem by referring it to another committee. It seems as though the Conference has no energy left even to end itself?

July 7. Despite the fears that the deadlock on the stabilisation issue would bring the Conference to a premature end, it has been decided after a further meeting of the Bureau of the Conference that the Economic Conference is to continue its deliberations, as also all its committees, including those on monetary problems. The gold *bloc* are not to take part in the discussions on monetary problems "for the time being", by which it is to be understood that they are not prepared to be parties to any discussions on monetary questions while the question of stabilisation has been "placed in cold storage". If this attitude of the gold countries continues, it is plainly impossible for the monetary Committee to achieve any tangible results, while important sub-commissions, like those on tariffs anod subsidies cannot function owing to the insistence of the gold countries on their futility until stabilisation is agreed to. The only work possible will be in connection with commodities like silver, timber, wine and sugar.

A Washington message states that Mr. Roosevelt has drafted a statement to the United States delegation, embodying in detail his view that world price recovery is the immediate objective of the conference. The gold *bloc* show little enthusiasm in the further discussions. They feel that an attempt is being made to get round their protest and are displaying resentment accordingly.

A split was threatened in the Financial sub-committee. Mr. Neville Chamberlain proposed that they should adhere to the discussion of the original agenda. He was challenged by M. Bonnet who defended the proposal for a monetary truce. Senator Couzens proposed to form two separate committees of goldites and non-goldites to work on parallel lines and blend their final reports. The debate concluded with the adoption of Mr. Chamberlain's proposal by 25 votes to 15.

July 10. The World Economic Conference resumed its sittings to-day after the week-end suspension in a tense atmosphere, rendered all the more complex by a new move on the part of the gold *bloc*.

At a conference of the representatives of the gold countries in Paris on Saturday a strategic plan for the defence of the gold standard was agreed upon.

Complete maintenance of the standard at the present rates is aimed at, but it is emphasised that this is not the organisation of an offensive against currencies off gold, but war against speculation.

According to *Reuter*, a common fund will be created and his will be "flung into action on the market at whatever point speculation threatens to attack the gold Currencies".

The efforts of the gold countries to enlist in their ranks the Soviet, Mexico and Hungary were the only lively feature at the week-end. These three countries did not vote, when the adjournment of the Conference was avoided only by seven votes to six. Their support will yet be the deciding factor but it is not clear whether it has been secured.

It is unlikely that the Bureau will be called upon to decide by a straight vote what course of action the Burean is to recommend to the Plenary Conference. Probably, a compromise will be arrived at by which the Bureaw will present a unanimous decision to the Conference.

In the Financial Sub-Committee, Major Elliot urged the Sub-Committee to continue work. He said their discussion would relate to the period when the general re-establishment of the gold standard would have become possible, and an agreement on the questions under discussion was an essential condition for the re-establishment of that standard. Nothing could be more designed to facilitate the early return to gold than an agreement upon the main principles of the working of the future gold standard.

July 11. The possibility of an early resumption of negotiations on the stabilisation of currencies is being discussed in London. The difference between the pound and the dollar from the old parity is how less than eightpence, and there is a feeling among the gold *bloc* that the dollar is moving towards a point at which the United States will be prepared to discuss stabilisation. The Congress of the Federation of Chambers of Commerce of the British Empire resolved unanimously that the pound sterling should be decimalised without delay by making it worth 200 pence, and substituting a nickel coin worth 1/100th part (two-pence) for the present three-penny piece.

July 12. The latest development in London is that the World Economic Conference will possibly adjourn until autumn.

The opinion among the delegates is that there is a sufficient number of subjects to occupy the attention of the delegates, with some hope of an agreement, within the next fortnight.

It is expected that the plenary session of the Conference will then be convened and its further work adjourned until the autumn.

The Drafting committee of the Monetary Sub-Commission recommend that the commission should proceed with the discussion of the subject of indebtedness, and also take up the resolutions already adopted by the Sub-Committees on Co-operation and the creation of Central Banks and also to pursue the examination of the silver problem.

Reports about an agreement on silver are as yet premature. It is understood that the agreement will provide for restriction of sales between India, China and Spain, as large holders, and the United States, Canada, Bolivia, Peru and Mexico as producers.

SIR JOSEPH BHORE

IDEAL INDIAN MEMBER IN VICEROY'S CABINET

Sir Joseph Bhore is the kind of person who wins your confidence though he may not impress your imagination. He may not have the *debonnaire* grace of Sir George Schuster ; nor Sir B. L. Mitter's instinctive air of an aristocrat ; nor the peculiar blend of astuteness and warm friendliness which you notice in Sir Fazli Hussain ; nor the unaffected charm and affability of Sir Frank Noyce ; nor the distinctiveness of Sir Harry Haig. Sir Joseph strikes one as just a simple, plain man ; but it is not the simplicity that some people deliberately affect nor is it the plainness of a mere humdrum mediocre.

His simplicity comes natural to him and seems to form so much part and parcel of him, that amongst all men that have occasion to come in contact with him, he has established the repute that his instinct is sound, his judgment correct and his sympathies warm and wide.

Of all the Indian members in the Viceroy's Executive Council since the admission of the *kala* member in the Olmpyian hierarchy, only three men have so far succeeded in winning the complete approbation of the varied sections of Indian opinion. They are Sir C. Sankaran Nair, Sir Mahommed Habibulla and Sir Joseph Bhore.

Sir C. Sankaran, however, made himself positively distasteful to his colleagues. Sir Mahommad and Sir Joseph have this is common that while retaining the regard and friendship of the Viceroy and the other members of the Council, they could impress the Indian public with a feeling that the interests of this country are perfectly safe in their hands.

Both of them have found their biggest asset in a supreme sense of tact, an essential horse-sense, a sincerity of conviction and earnestness of endeavour.

Their successful careers are the best illustration that so long as one is honest with himself and the world and always seeks to understand matters in their fundamental bearings, he could easily steer clear of unnecessary suspicion and needless misunderstanding.

Sir Joseph Bhore is the kind of official who is, in all conditions, and on all topics, impartial and disinterested. He has a just poise of mind. He can never take sides. Intrigues are foreign to his nature. He has never had any axe of any kind to grind nor would he let others grind their axes on him. He is interested, earnestly and to the full extent of his ability and understanding, in the work entrusted to him ; and all that he is concerned with is to do the work exactly as it should done.

Mahatma Gandhi has exemplified that the best diplomat is one who pursues the truth and nothing but the truth. Sir Joseph Bhore has demonstrated that the most popular politician is one who deals frankly, honestly and justly with all men and in all situations.

He is not exactly fitted for politics in the sense, for instance, that Sir Malcolm Hailey is fitted for politics. On a superficial view, one might conclude that Sir Joseph is too blunt and too simple to make an impressive politician. But while Sir Malcolm, in his Assembly days, was admired for his brilliance by everyone on the Opposition benches, Sir Joseph is loved and trusted as one who could always be relied on to do the right thing at the right time and in the right way.

Sir Joseph has an apt combination of essential and wholesome traits and a complete elimination of whatever is unwholesome.

He does not go about inviting your awed gaze to the halo that surrounds the head of a Member of the Viceroy's Cabinet. On the other hand, he is essentially modest and makes men with feet of clay feel at home in his presence.

He is, in no sense, a genius. By the same token, he is free from all traces of the whimsicalities and idiosyncrasies of genius. He is cool, collected, self-possessed and courteous to one and all, irrespective of their so-called status in society or official life.

He has no desire to be brilliant. He does not scintillate. He is just a steady, reliable beacon of light.

He has neither the superiority complex nor the inferiority complex. He has just the complex of a well-balanced mind. He states his case with conviction and firmness. He is never over-vehement. At the same time, he is equally appreciative of the possibility and strength of the other point of view. His is not the dogmatic, but the persuasive and reasoning, style. On all occasions, even when he is associated with decisions with which others might be in strong disagreement, his critics would freely concede the *bonafides* of Sir Joseph's standpoint.

For all these reasons, despite a quarter of a century's association with traditions which breed bureaucracy, Sir Joseph has remained singularly free from any bureaucratic bias.

The Secretariat has a way of making its officials come to believe in the infallibility of their wisdom. To preserve an open mind after years of contact with Simla and Delhi is no small achievement. Sir Joseph is ever popular alike with his supporters and critics for the simple reason that he has a fresh outlook and never arrives at final conclusions without giving the fullest weight to all the aspects of the question :

"Agree to disagree" is a phrase which has a profound significance in dealings and discussions with India's first Indian Commerce and Railway Member.

CASTINGS

SPECIALIZATION in the manufacture of General Castings in these times necessitates a high degree of skill in draftsmanship, pattern-making, metallurgy, foundry practice and engineering.

These in turn call for the most up-to-date plant and machinery, the finest of raw materials and labour trained in the art of moulding on the most modern lines.

The reputation which KULTI has gained for its products, results from a combination of all these factors.

Magnificent castings of types rarely attempted in the majority of foundries are now available at prices which compete even with inferior substitutes. The same skilled workmanship is applied to all Castings whether large or small.

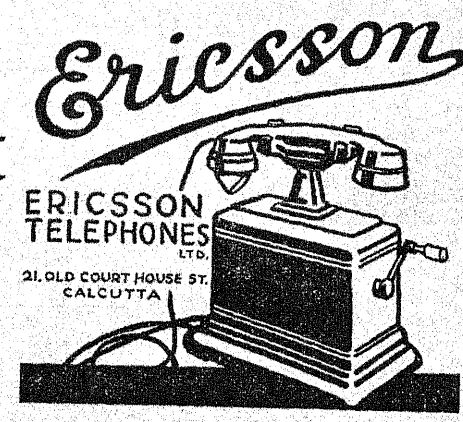
Clive Street Gossip



Our Bombay friends have always professed great love and unlimited solicitude for the masses. So do our Simla friends claim to be most sincerely devoted to the interests of the dumb millions. Our stalwart legislators in the Assembly are ever trying to persuade themselves and others that they are the truest representatives of the nation; and what time they canvass for roving missions to London and Geneva and Ottawa at the risk of the tax-payer as to costs and damages; they shed crocodile tears for the masses "bled white". Labour leaders, who have wealth (howsoever acquired!) but have yet to acquire a career, bewail the hard-heartedness of all others but themselves towards the poor and down-trodden. The many are exploited by the few that the latter may acquire a status in public life. In theory, the masses are, verily, over-friended; in fact, they are helpless, friendless and past all hope of redemption from a life which is but lingering perdition. If democracy in the West is a failure, the claim of most of our men to look to the weal of the masses is a farce. What is happening to-day is but the perfecting of the machinery which will protect and further the interests of the urban, educated, vocal and comparatively well-to-do classes. Nothing has so far happened which lends encouragement to the hope that the inarticulate, unorganised population of the rural parts, and the humanity that lives in towns and cities on just the fringe of starvation will be any better off in the new *regime*. But, in high-sounding terms, many are those who seek to be their champions, trustees, representatives, spokesmen and guardians. Oh! what a farce—a pitiful, saddening farce!

* * *

These professional guardians of the "dumb-driven cattle" of Rural India met in Simla on the occasion of the Sugar Conference. And they were shown up in their true colours. As our Simla Correspondent points out in this week's communication, the industrialists, who have always clamoured for legislative protection for their own interests, want no such protection for the ryots. On another page, our Bombay Correspondent refers to the admission of the East India Cotton Association that Japan's boycott of Indian cotton has already resulted in a depreciation of the value of our cotton by Rs. 15 per candy. Yet, our millowner-friend says that Japan is bluffing. Japan does not bluff. Who, then, is the one that bluffs? Anyway, it is the cotton-grower that is the victim of all this, be it bluff or otherwise.

* * *

They are a curious lot—these industrialists. The textile interests appeal for more and more protection on the plea that the cotton mill industry is a national industry. Yet, they will keep their moneys in non-national banks and seek Indian banks only in case they have to borrow. They will give their insurances to non-national concerns if they could get 1 per cent. more of commission or rebate. They are now cultivating the fashion of using more and more of non-Indian cotton. Few of the men that direct the industry wear the cloth they expect you and me, out of patriotism, to buy at higher prices for coarser qualities. An industry, which claims to be national, should set a higher standard of conduct and example in its attitude towards other national interests.

Then, again, take the cement companies. They asked for, and got, protection on the plea that cement manufacture was an important Indian industry with vast possibilities. They appeal to the public to give their exclusive custom to Indian cement. Yet, their advertisements are handed over to a *non*-Indian advertising agency; the bulk of their allotment for advertisement expenditure is earmarked for non-Indian papers; and the central organisation itself is manned, in the higher ranks, by non-Indians. Or, take the Tata Oil Mill Company. Indians are the exclusive owners of this concern. Few non-Indians use its products. Yet, its advertising campaign requires the talent and genius of a non-Indian agency; and it must needs conduct most of its publicity through the columns of non-Indian journals. The moral and lesson of which is this: It requires a magnifying glass of the extra power suggested by Sam Waller to scrutinise the credentials and *bona fides* of the industrialists, who make appeals for all manner of help and patronage on the score of nationalistic sentiment.

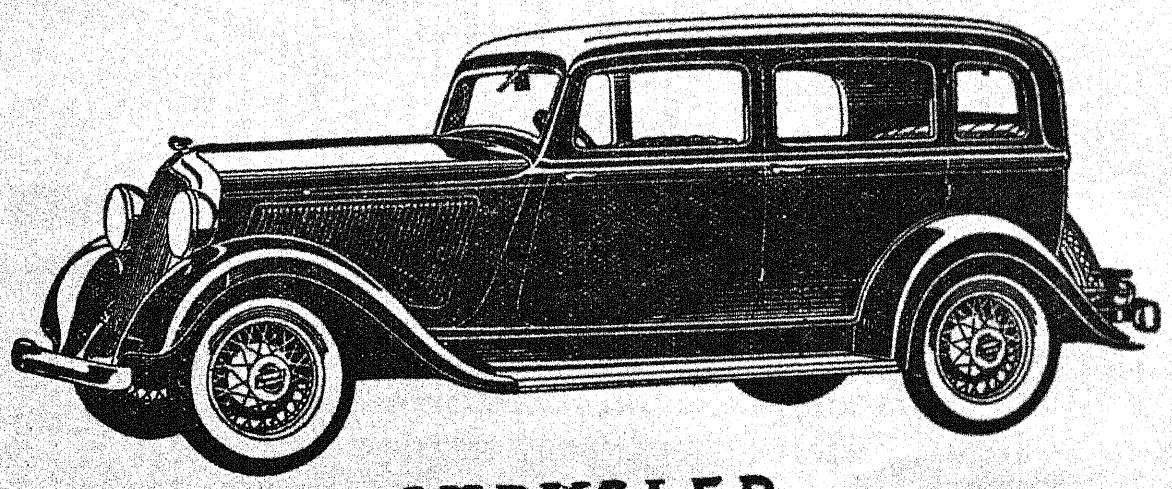
* * *

Mr. Pothan Joseph, Editor of the *Hindusthan Times*, writes to me as under:

> "The Monetary Sub-Committee of the World Economic Conference maintained that the minimum amount of gold to be kept as currency backing in every country should be 25%. Sir George Schuster in his Budget Speech maintained that India was keeping a proper proportion of gold in the Currency reserve. If is does not amount to 25% is it not time we thought of mending the old Act? Will you kindly throw light on the subject and give some of us who study your opinion a lead?"

* * *

As the currency law stands at present, the nature and proportion of assets in our reserve are neither clearly defined nor satisfactory from the scientific point of view. There is no use discussing the adequacy or otherwise of our reserves on the basis of present statutory requirements. The Gold Bullion Standard and Reserve Bank of India Bill contained detailed provisions as regards the composition of the Reserve; and, due to its withdrawal, the resultant position is amorphous in the extreme. For purposes of discussion, we have, in the first place, to take note of the two reserves we have, namely, (1) Paper Currency Reserve; and (2) Gold Standard Reserve; on the liabilities side, we have to take into account the paper notes in circulation and, at the same time, to



CHRYSLER

PLYMOUTH

The Chrysler Plymouth Six has new beauty and new performance, and it has Floating Power.

THE CAR THAT PUTS SAFETY FIRST!

ONE PIECE STEEL BODY

electrically welded together in one solid unit. Light, immensely strong, practically indestructible. There are times when the all steel body may mean the difference between life and death. Under the fiercest impact it guards you and yours with its unbreakable protection. Body squeaks re, moreover, eliminated.

HYDRAULIC BRAKES

Self-energising, self-equalizing. Smooth and direct in action, these brakes are the most efficient type known. No rods, cross rods, operating arms to need lubrication. Unequalized brakes, the commonest cause of skidding, is impossible with Plymouth hydraulic 4 wheel brakes.

RIGID X FRAME

gives low centre of gravity, immense rigidity and particularly good road holding ability. Corners may be taken faster without dangerous side sway.

UNUSUAL ACCELERATION

a vital need with traffic conditions of today. Many an accident has been avoided by sure accelleration at the right moment. Great saving of time is possible. It enables you to whip out of traffic jams whilst other drivers are still fumbling with their gears.

There are over 35,000 motor vehicles on Calcutta roads today. Those roads have been made faster. Cars have been made faster too. You should consider SAFETY FIRST when deciding on your new car.

FRENCH MOTOR CAR CO., LTD.

DELHI ∴ ∴ CALCUTTA ∴ ∴ LUCKNOW

provide for the redemption of the silver rupees in circulation. In the second place, the easiest way of approach to this problem is to take, as the basis, the proposals of the Hilton-Young Commission, in which the final calculations were made after amalgamating P. C. R. and G. S. R. and after providing for liability on paper notes and on redemption of silver rupees.

* * *

On page 99 of the Report, the composition of the Reserve was thus laid down on the basis of the position of P. C. R. as on April 30, 1926:

LIABILITIES.

	Rs. crores.	
Note issue ...	... 185	
Rupee redemption	... 50	
	235	

ASSETS.

	Rs. crores.	
Silver coin ...	... 67	
Rupee securities	... 50	
Gold securities	... 88	118=50%
Gold ...	... 30	
	235	

* * *

The above table may be modified as under in the light of the latest returns of the two reserves:

LIABILITIES.

	Rs. crores.	
Note issue ...	... 177	
Rupee redemption	... 50	
	227	

ASSETS.

	Rs. crores.	
Silver coin ...	... 104	
Rupee securities	... 44	
Gold securities	... 38	82.3=36%
Gold ...	... 44.3	
	230.3	

* * *

It must, however, be remembered that gold is now valued in our reserves on the basis of a ratio equivalent to 1s. 6d. gold, that is, Rs. 21-3-10 per tola of gold. The new parity of the rupee is sure to bear such a depreciation as to make the price of gold on revaluation at least 50 per cent. higher than the old rate of Rs. 21-3-10. Sterling securities will not be affected on revaluation but gold both in P. C. R. and G. S. R. will show a 50 per cent appreciation when the form of the Reserve is recast. The following shows the altered position.

LIABILITIES.

	Rs. crores.	
Note issue ...	... 177	
Rupee redemption	... 50	
	227	

ASSETS.

	Rs. crores.	
Silver coin ...	... 104	
Rupee securities	... 44	
Sterling securities	... 38	104½=46%
Gold ...	... 66½	
	252½	

* * *

Thus, on revaluation, our gold holdings will be about 30 per cent. of the liabilities; the combined reserves in sterling securities and gold will be 46 per cent. of the liabilities. In the above table, total liabilities are shown at Rs. 227 crores; and assets at Rs. 252½ crores. This is somewhat misleading. Our assets include *adhoc* securities for about Rs. 40 crores; and silver of the nominal value of Rs. 104 crores, the white metal being shown in the accounts on the basis of Re. 1 per tola. The short-fall under these two heads has to be taken into account in interpreting the apparent excess in the value of assets over liabilities.

If the minimum of gold prescribed by statute is to be 25 per cent. it means that a fairly safe margin above such limit should be maintained in ordinary conditions. From this point of view, the 30 per cent. ratio of gold to liabilities, which we will have only in the event of revaluation, can hardly be considered as adequate. We may be told that when sterling securities are added to the stock of gold, the proportion of the reserve is increased to 46 per cent. But it should never be forgotten that in the case of a country like India, whose financial and monetary policy in fundamental matters is dictated to by the India Office which is, in turn, dictated to by the Bank of England, sterling securities cannot be considered as at all equivalent to gold. The Hilton Young Commission did make a recommendation that at every suitable opportunity, the Government should increase their holdings of gold. A bare £2 million worth of the yellow metal was bought in the early stages. But the good resolution ebbed away soon enough; and whatever gold was added to the reserve in the subsequent period was due to factors for which the Government could claim no credit whatsoever. In other words, no attempt has at any time been made seriously for the converting of sterling securities into gold, while, on the London market, large quantities of gold have been available during these six years and every country including Britain has been buying whatever could be purchased.

* * *

There is another factor of great importance and peculiar significance to India. On Home Charges account, we have to find every year an amount of the order of £25 million. In respect of the invisible items, like tourist expenditure incurred by Indians abroad, remittance of earnings and profits of Britishers from India, an equally substantial sum is required. This is on the liabilities side. On the income side, India has but little to receive by way of interest on overseas investment. Nor is this country a paradise for tourists. Nor do foreign students feel attracted to any of our universities. We have hardly anything to receive in respect of the invisible items from foreign countries. India is the kind of country which has to provide for a recurring outflow of anything like £40 million to £50 million. In the last two years, it has been proved that so large a need on this account could not be sustained by the merchandise figures. With foreign annual liabilities of a more or less fixed nature, with the merchandise position remaining extremely obscure, it would be most unsafe if our currency reserve is not fully provided with resources that can be utilised on occasions when the international balance sheet turns out to be markedly adverse to India. The minimum limit of 25 per cent. for gold holdings is all right for countries with light external commitments. The minimum limit for India in her peculiar position is 40 per cent., the proportion recommended by the Hilton-Young Commission; a safe limit is 50 per cent., also provided for by the Commission.

Improvement Trust—a War Baby: Spendthrifts had a gala time: Little voice of Conscience unheeded: Ill-used K. N. Ramasubba Aiyar stands vindicated: E. I. C. Association's admission of depreciation in Cotton price:

(From Our Correspondent).

Bombay, July 12.

If you have the Howrah Bridge as a theme that occasions endless talk and indefinitely-postponed action, so do we at this end discuss and keep discussing the proposal for the amalgamation of the Improvement Trust with the Corporation. This topic has been engaging public attention for a decade and a half. In the earlier days, the Corporation claimed control over the Trust as a matter or right. In the altered circumstances of to-day, however, the Improvement Trust is more in the nature of an unwanted baby.

In 1920, by all indications, both the Bombay Corporation and the Bombay Improvement Trust had every cause to feel proud and jubilant over the prosperous condition of their finances. The sequel of Lord Lloyd's high-sounding schemes is that not only is the province of Bombay financially crippled but the erstwhile sound public bodies like the Bombay Corporation experience considerable stress and strain on their resources as a result of the development scheme follies.

Lord Lloyd's ambitious projects concerning the city of Bombay were divided under three heads: (1) the development department which was directly under the charge of the Government; (2) Bombay Corporation; and (3) Bombay Improvement Trust. Each one of these undertook heavy expenditure as part of the development programme. The development has taken place; very much more than the original estimated expenditure has been incurred; but none of the earlier anticipations about revenue have any chance of materialising. In conjunction with the development department, the Improvement Trust in particular, and the Corporation to some extent, undertook capital expenditure, relying on the hope that the interest and sinking fund service of the loans incurred would be met by the sale of land at satisfactory prices in the developed areas and by other analagous incomes.

A huge area has been developed on the Worli side; fine roads laid out; a pleasant sea-front and good lighting arrangements; nevertheless, the sole occupant of this vast area is Mr. S. N. Pochkhanawalla of the Central Bank. In respect of this particular scheme, considerable sums were spent. A hill on one side of the road was demolished and all the earth thus obtained was used to fill a marsh on the other side. But the demolished hill and the filled-in marshes, neat and natty in their lay-out, have yet failed to attract prospective builders of houses. The bleak, bald Worli development project and the rows on rows of unoccupied chawls stand out as colossal follies illustrating a stage of extravagant hopes followed by one of utter disillusionment and discomfiture.

The present position is, therefore, this: The Corporation and the Improvement Trust incurred the heavy liabilities in the confidence that boom conditions in property would continue and that the loans should be considered as secured by protective assets. The assets are there; but their earning capacity is not a fraction of the initial estimate. In this situation, the Corporation has its own problems to solve as it has to provide for the service of loans in respect of non-earning assets. When the deficit of the Improvement Trust and its loan conundrums are also to become the concern of the Corporation, it is no matter for surprise that the Corporation would rather keep clear of a transaction which means a certain increase in financial budgets.

The trouble about the Improvement Trust is that its constitution, from its inception, has been such as to make it entirely bureaucratic in policy, outlook and action. The Indian element on the Board of Trustees was, for a long time, confined to two members; and though, later, more Indians were taken, the very atmosphere of the Board Room in the Improvement Trust building would appear to be far from congenial for sturdy champions of popular views.

During most of its career, the Trust has had the kind of members who were more or less creatures of the paid chairman. It was this bureaucratic element that was responsible for the Improvement Trust undertaking projects without proper scrutiny of possibilities. Nor were suitable safeguards and checks and scrutiny provided in the execution of the projects.

Engineers and their staff were the masters of the situation; principles of higher accounting and audit were defied with impunity. In the case of so large a spending organisation, the machinery for assessing the financial aspect of schemes, for accounts and audit was the weakest. It was this aspect of the matter which was brought to the forefront by Mr. K. M. Rama Subba Aiyar. He pointed out the absurdity of the position in which the spending staff were allowed to do what they liked; and he insisted on a proper system of audit by an officer who should be independent of the chairman as the executive head and directly answerable to the Board of Trustees. For thus insisting on the most correct principle of audit, Mr. Aiyar lost his job. The Chairman and Trustees sided with the spending department as against the supervising department.

It is the spendthrifts that have brought the finances of the Trust to the present plight. If the warning of Mr. Aiyar had been heeded to in time, the Trust finance would be far less unsatisfactory that is now the case; and it need not have been in the unenviable position of being an unwanted baby.

The Select Committee of the Bombay Legislative Council on the Bombay Municipal—Improvement Trust Amalgamation Bill (whose report has been published this week) were, therefore, seriously concerned to find out ways and means for carrying out the merger in such a manner as to preserve, intact, the financial credit and borrowing capacity of the Corporation. If the loans of the Trust were added against the security provided in the rates and taxes of the Municipal Corporation, this would, to some extent, depreciate the security of the Municipal debenture holders whose rights are at present secured by the repayment of taxes and rates of the Municipal Corporation. In the view of the Select Committee, the best solution for this difficulty would be to retain a *status quo* as far as possible in respect of the security of the two classes of debenture holders.

They have, therefore, provided that the loans contracted by the Trust should continue to be subject, as regards repayment, rate of interest, period, guarantee for fulfilment of liabilities and in all other respects, to the same terms and conditions as were fixed by the Trust when those debts were contracted, and that the loans contracted by the Corporation should as heretofore continue to be subject to the same terms and conditions as were fixed when those loans were contracted.

As, consequent upon the amalgamation, the Corporation will have to raise loans for two distinct activities, namely, Municipal Administration and Improvement, the Select Committee have come to the view that the borrowing powers of the Corporation for these two purposes should be separately defined. Their recommendation in this behalf is thus explained:

THE STATE-AIDED BANK OF TRAVANCORE, LTD.

Head Office :

Alleppey

Branches :

Trivandrum, Changanacherry, Cochin, Quilon, Kottayam, Kayenkulam & Ernakulam

(Under the patronage of the Government of H. H. The Maharaja of Travancore).

Chairman :

Mr. K. C. PANDALAI, B. Sc., (Econ.)

Fixed Deposits are now received at the following rates:—

6 Months	... 4 %	per annum
1 year	... 4½ %	,,
2 Years and more	5 %	,,

The interest is payable half-yearly. The Bank has made arrangements at Madras, Bombay, Calcutta and Bangalore for receiving and paying the Deposits AT PAR.

"We are of opinion that the present limit for the borrowing power of the Corporation for the purpose of municipal administration should remain as it is, namely, double the rateable value of the premises in the city of Bombay assessable to property taxes, but that any debts or liabilities that might accrue owing to the proposed amalgamation of the Trust with the Corporation should be excluded from the calculation.

We also think that the sum borrowed by the Corporation for discharging the obligations arising out of the transfer to the Corporation of the powers, duties, assets and liabilities of the Bombay Improvement Trust, including the balances of all outstanding loans and debts borrowed so far should similarly not exceed, on the whole, double the rateable value of the premises assessesable under the Act, and further, that the sum borrowed for making good any deficit in the budget for improvement purposes should not in any year exceed 20 lakhs of rupees."

On one or two matters, the conclusions of the Select Committee are not unanimous. In a joint minute of dissent, Mr. Chandavarkar and Mr. Nissim state that there is no need for making special provision for the appointment of a Deputy Municipal Commissioner (Improvements) ; as under the Municipal Act, the Corporation has the power to appoint as many Deputy Municipal Commissioners as may be found necessary.

Both of them are also of opinion that provision should be made in the bill enabling the Corporation, with the previous sanction of the Government, to dissolve the Improvements Committee and to invest all its powers and duties in the Standing Committee of the Corporation on a resolution passed by a majority of two-thirds of councillors present at a meeting of the Corporation and voting on the question.

Mr. Chandavarkar and Mr. Nissim next desire that a provision should be made in the Act to enable Corporation to undertake the schemes for the poorer classes on the lines laid down in the Bombay Improvement Trust Transfer Act, of 1925.

There is yet another note of dissent. The signatories are: Sir Rustom Vakil, Mr. G. Davis (Secretary, Legal Department), Mr. R. B. Ewbank (Secretary General Department), Sir Jamshed Kanga (Advocate-General), and Mr. A. Master (Collector of Bombay City and Suburbs) who express the opinion that the provision that three-fourths of the net receipt from the tobacco duty levied shall be credited to the General Fund should be retained.

In a previous communication I referred to the statement of the East India Cotton Association on the threatened boycott of Indian cotton by Japan. The reply has now been received from the Japanese Cotton Spinners' Association, Osaka ; and after pointing out that "India and Japan have maintained, for the past thirty years, the closest connection in the cotton trade ; and that "Japan has imported an average of 1,250,000 bales each year reaching 50 per cent. of the total cotton export from India," the Osaka Association do not give any hope of the resumption of friendly trade relations so long as the tension caused by the abrogation of the Indo-Japanese Trade Convention and the prohibitive tariffs continued. The reply concludes with the following appeal :

"However, the desire of the Japanese trade coincides with yours for regaining normal trade relations; and furthering this, therefore, we would like your Association to approach your Government and recommend to them to modify their discriminative and suppressive attitude against Japanese cotton goods."

The statement emanating from Osaka was examined by the Board of the East India Cotton Association, who, while deciding upon addressing a communication to the Government of India on the matter, urged a strong plea to the Japan Cotton Spinners' Association to take immediate steps to rescind, in the mutual interest of both India and Japan, the boycott resolution and to strengthen the E. I. C. Association's hands in the latter's efforts to bring about a solution acceptable to both the countries. In the course of this reply, it is pointed out that Japan's resolution to boycott the use of Indian cotton may provoke retaliatory sentiments in the minds of the Indian masses who may seriously consider the question of boycott of not only Japanese textiles but also other goods made in Japan ; and that the Indian populace is behind the Indian growers of cotton and any harm done to the latter will react on the existing trade relations between the two countries.

At the same time, the East India Cotton Association have addressed the following appeal to the Government :

"The Board of Directors of the East India Cotton Association, Limited, realise the imperative necessity of drawing immediate attention of the Government of India to the fact that the recent boycott of Indian cotton by the Japan Cotton Spinners' Association has resulted in the depreciation of the value of Indian cotton to the extent of Rs. 15 more or less, per candy, and beg to point out that if immediate and effective steps are not adopted by Government to arrest the decline caused by the boycott, there is every probability of the interests of the grower of cotton being jeopardised to a greater extent than now, when the new crop will commence to move three months later.

The Board, therefore, urge upon the Government of India that they should take immediate action in the matter in order to safeguard the interests of the grower of Indian cotton against the prejudicial effects of the boycott."

The E. I. C. Association's admission in regard to the depreciation of the value of Indian cotton as a result of the boycott must be deemed to be more true to facts than the Bombay Millowners Association's facile generalisation that Japan's threat is "mere bluff."

During the week ended Saturday, July 8, bar gold valued at Rs. 51,67,424 was exported from Bombay for Europe and America by the P. and O. mail boat R.M.S. "Corfu."

The consignment to London amounted to Rs. 32,46,990 worth of the yellow metal, while the other shipments bore the following descriptions :

Aden, Rs. 4,125; London, optional Paris, optional Amsterdam, Rs. 5,85,006; London, optional Amsterdam, Rs 2,87,929; and London, optional Paris, New York or Amsterdam, Rs. 10,43,374.

The total exports of gold from Bombay since Great Britain went off the gold standard now amount to Rs. 1,44,89,98,327.

"Watchman"

(*Continued from page 67.*)

When, however, owing to the indiscretion of some of those in the know, reports about the stabilisation agreement crossed the Atlantic and had their apprehended effect on he stock and commodity markets, Mr. Roosevelt was obliged to deny all knowledge of the agreement. But since then, American public opinion has slowly recovered from the idea that without the constant promise of unlimited depreciation of currency the revival of trade and prices would be impossible. On the last two days of Air Mail week, prices were well sustained despite the rise in the dollar, though operators were inclined to be more cautious. If this affords a key to American psychology in recent weeks and if the summit of inflationary ambition is not far off, then we might expect that the negotiations for stabilisation will be taken up soon and the way thus paved for the success of the World Economic Conference.

OLYMPUS

Differing Views of Simla and London: Hon'ble Ministers at Loggerheads: Industrialists, who ever seek legislative protection for their interests, want none for agriculturists: U. P. and Behar favoured with excessive voting strength: Sir Fazli Hussain, for the moment, only an interested spectator:

(From Our Correspondent).

Simla, July 12.

The week has witnessed a good few happenings of a political nature. There is also the Sugar Conference, which, thanks to a wise decision of its promoters, was thrown open to the press.

* * *

Politically, there seems to be an interminable tug-of-war between Simla and Whitehall. The former stands for early introduction of reforms; the latter holds that while a Reform Act may pass, financial conditions will have to be more satisfactory before it is given effect to. Which may mean 1935 or—who knows?—1940.

* * *

The other quarrel is about the Congress. Apparently, Whitehall is more inclined to rope in Congressmen than Simla. Whereas to Sir Samuel Hoare, Mr. Gandhi is a leader of men who cannot be ignored and must be appeased, to Lord Willingdon the Mahatma represents all that is unstable, unreliable and destructive.

* * *

Who can predict what the end of it all will be? It is going to be a long-drawn-out affair and there is very little chance of an early settlement either way. So let me turn to matters of more immediate interest.

The Sugar Conference has reproduced the triangular conflict, of which I just gave a hint in one of my previous communications. Only the Government have kept in the background their own point of view on the plea that they would like to hear what the others have to say on the subject.

* * *

Thus, the questions as to whether any legal remedy is called for and whether a stage has arrived when the imposition of excise duty should be considered are to be dealt with by the Simla Gods in the light of their Secretariat wisdom and inspiration.

* * *

The interest of cane-growers *visavis* the manufacturers were thrashed out in the discussions, in which inter-provincial jealousies and suspicions were fully reflected. Sir Fazli Hussain, acccepting the normal procedure of conferences, allowed the Bihar Minister, Syed Muhammad Hussain, to move his resolution that other provinces anxious to start factories should proceed cautiously in the matter. But the manner of his motion did not commend itself to those who became intensely suspicious.

* * *

The resolution itself was passed. But it was by a very narrow majority in which the dice was loaded in favour of Bihar and U. P. Naturally, Madras grew more suspicious. Mr. Narasimha Raju said "No more resolutions, please." And the Conference, by a majority of one vote, said "O. K."

* * *

Having, however, agreed to cautious advance, the main question was to fix the minimum price for the cultivator for his cane, as, according to Mr. Prior, the Revenue Secretary of the Bihar Government, there was wrong weighment and contractors were the worst sinners. Should there be licensing of these contractors? Should there be a minimum price fixed? Should there be zoning of the areas? And should these be effected by legislation or left to the law of supply and demand?

* * *

The capitalists, including Dr. Narang and Mr. Khaitan, said "No legislation." Mr. Srivastava, the U. P. Minister, actually presented a draft of a bill for zoning and other measures. If this was not agreed to, the United Provinces, at any rate, where the problem between cane-grower and manufacturer was acute, might come to be the scene of early and acute agrarian revolt—such was the warning uttered by Mr. Srivastava.

* * *

The argument was irresistible. Sir Fazli Hussain favoured the appointment of a committee to examine Mr. Srivastava's proposal. But Dr. Narang protested against the manner of selection of the committee. He asked: "Is this a private affair between Sir Fazli Hussain and Mr. Srivastava?" But the Conference did not mind the gibe of Dr. Narang. It had been regaled previously to the spectacle of the two Punjab Ministers being at loggerheads; and Sir Fazli Hussain, on his part, had ascertained that none except Mr. Khaitan shared Dr. Narang's view.

* * *

The Committee is meeting just as I write. Its report may not be unanimous, for Mr. Prior of Bihar is opposed to legislation, and his views have been heard with attention by the Conference. Whether the committee is unanimously in favour of legislation or not, there is no doubt that some steps are to be taken to protect the cultivator as against the industrialist by the adoption of minimum price or as against the contractor by licensing system.

* * *

The Government of India have not expressed any opinion on these matters. For the moment, they are in the position of interested spectators. After the Conference, the proceedings will be scrutinised and steps taken. All-India legislation laying down definite policy is regarded as essential. The provincial legislatures also would have to follow suit in accordance with their local conditions.

"HILLBIRD."

MUTTRA ELECTRIC SUPPLY CO., LTD.

NOTICE

is hereby given that the Thirteenth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Saturday, the 22nd July, 1933, at 11-10 a.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the Half-Year ended 31st March, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 14th July, 1933 to the 22nd July, 1933, both days inclusive.

Dated Calcutta, the 10th July, 1933.

THE READING ROOM

Money: Gold, Silver and Paper. By Francis W. Hirst. Scribners. 7s. 6d.
Gold Reserves and the Monetary Standard; By D. S. Edwards; P. S. King & Son, Ltd. 5s.

I have been threshing a fresh crop of monetary treatises. Though there is no less overproduction in letters than in factory or farm, the student of modern economic problems should feel no surfeit of ideas or books. To follow the day-to-day events, to put them together in periodical reviews, and, at a fair distance of time, to set them in proper perspective and in the back-ground of past history, up-to-date and topical works are well-nigh indispensable. And facts properly understood and interrelated inevitably become theories with a universality of significance and application. Thus it is that every historical account has its own moral; and, as a converse, every theorist is led to dive into history and, unfortunately, often enough, bend the latter to the requirements of the former.

Mr. W. Hirst has a pretty voluminous work entitled *Money: Gold, Silver and Paper.* The ostensible purpose is to sketch the whole history of money through time, on lines similar to those of Sir Norman Angell in his *Story of Money.* And Mr. Hirst has apparently been able to gather more material than Sir Norman. Much of the more important facts are imbibed by the student of economics from the ordinary textbooks. But the chapters on the development of the art of minting have a more than economic interest and would be relished by those who, while devoting themselves to economic studies, like to keep in touch with other branches of human knowledge and experience. In these days when notes are printed on crumbled rags, it is happy to recall that the gold coins of Venice and Florence were real works of art to be cherished as much for their beauty as for their value on the markets. Equally welcome is the light now thrown on the origin of the dollar, the Almighty dollar whose debility is a worse threat to its neighbours than its vaunted strength. It is derived from the one-ounce silver pieces coined by the Counts of Schlick from the output of the mines of Joachimsthal. They were known first as Joachimsthalers or "Thalers" for short, and with the change of the German "th" to the English "d", we have the dollar. The dollar was nearly unwanted in the first half of the 18th century when, owing to the practice of issuing notes on the security of land, land banks grew like mushrooms. It was then that Tom Paine wrote the off-quoted words about inflation: "Paper money is like dram drinking; it relieves for a moment by decetiful sensation but greatly diminishes the natural heat and leaves the body worse than it found it. . . . Every emission of paper credit called money will, in time, contribute to our misery."

Mr. Hirst has, thus, turned the big guns of historic experience on the advocates of inflation and all manner of managed currency. Though Mr. Hirst disclaims all intentions to write with broad reference to the problems and controversies of the day, it is still clear that the whole volume is planned in order that it may be an effective answer to the claims of the latest faddists in currency. But no advocate of managed currency will see in the recital of past history an answer to his contentions. For, the former always presupposes a certain degree of capacity and integrity in those who may be entrusted with the administration of currency and credit. For, whatever one might say about the upsets in world currencies during the past three years, there can be no valid charge of deliberate dishonesty or chronic incapacity on the part of the central banks of the world. If the plans of central banks had in some cases gone awry, it is because the currents of world finance and, more, world economy have been too strong for them. One might question some of the objective of central banking policy; but there is hardly anything in the recent history of currency policy which can be compared to the shamelessly selfish debasement of currencies carried out by ancient potentates or the recklessly unprincipled finance of belligerent governments during the war. Rather, the pendulum has swung violently to the other end; and it would not be groundless to suggest that the so-called orthodox principles of finance have been stuck to even under conditions in which they call for considerable modification. Throughout Mr. Hirst's book, a placid faith in a purely metal standard is obvious. He brings even the token subsidiary coinage under the stigma of debasement. He is severe on Mr. Keynes for his scheme of a note issue which is "as good as gold". Withal, he has to incline towards the idea of symmetalism which differs from bimetalism only in the elimination of a fixed ratio between the two metals. It is difficult to understand—and Mr. Hirst offers no help in this respect—how under symmetalism all need for management could be fully eliminated.

From Mr. Hirst to Mr. Edwards, it is a striking, and in some respects a refreshing, change. While Mr. Hirst may be regarded as chafing under the necessity of some degree of management, Mr. Edwards is found to regret that "it will prove difficult to discard some form of contact with a metallic background to the currency". Opening with an examination of the working of the gold standard in England and the relation of the gold reserves and the bank rate thereto, Mr. Edwards leads the reader to a consideration of the reports of the Gold Delegation. He charges the authors of the report with betraying from the outset "a distaste for original currency developments by outlining some of the guiding ideas with which its task had been approached". Nor was the Delegation accurate in its estimate of the relative supply of gold in the coming years. Its ambition was limited to the formulation of a scheme practicable for the next fifteen or twenty years. It is against these limitations of vision and purpose that Mr. Edwards, speaking on behalf of a younger generation, makes a vigorous protest. "The existing generation of youth", he contends, "has no desire to be caught up in another depression of a magnitude comparable with the present. . . . The facts of the immediate gold supply may not be so full of threats as a number of apprehensive economists would have the world believe". He rubs into the authors of the Report their admission that "the complete process of restoration, if and when it is decided upon, will take a prolonged period to take effect". He considers it as a blemish that the reports contain no consideration of alternative methods of management. Sooner or later, Mr. Edwards says, on the Delegation's own statistics, reorganisation of the standard in the direction of a greater degree of management has got to come." In support of this prognosis, Mr. Edwards offers illuminating criticism of the system of credit instituted by the Federal Reserve Act, its failure to enable an expansion of the note issue *pari passu* with the expansion of general trade, and the amateurish attempt at reform signified by the Glass-Steagall Act. The time limit prescribed for the Glass-Steagall Act shows that the American authorities cherish the hope that all would be well with the eligible paper supply by the time the Act expired.

Mr. Edwards's criticism of the American experiments is that the authorities had not "as yet contemplated the idea of placing that part of the circulation not covered by gold but backed by securities under the supervision, and subject to the alteration, of a committee of men independent of Congress and specially qualified for the task." For, as it stands, the Glass-Steagall Act represents a political intrusion into the realm of currency and as such the position

is not without risk unless the most discriminating control is exercised. The position of the Bank of England, Mr. Edwards believes, is no better. For the method of selection for the Board can scarcely be described as having a broad national basis, eminent though many of the men have been whom duty has called to its councils. Other minds equally, if not more, authoritative in currency matters, may rise to national eminence by routes differing widely from those normally taken by the Bank of England director".

Thus, the leading ideas of Mr. Edwards's constructive scheme are the acceptance of management of currency as not only an inevitable, but eminently desirable attribute, of a currency system, the elimination of political control and the assurance of expert management in the interests of the nation as a whole by providing a Currency Board consisting of competent experts.

The book under review contains an elaborate scheme for the constitution of the Currency Board in Britain which the author would like to see embrace all the countries of the British Commonwealth. As it an Empire Currency Board is not a sufficient stretch of imagination, Mr. Edwards considers also the possibility of other countries joining the new sterling area till it comes to apply to practically the whole world. He does not consider it easy for the United States to form a dollar area for lack of the ties similar to those which bind the British Commonwealth together. With a rough division of labour between the U. S. A. and Great Britain, the former as the undisputed exporter of long-term capital and the latter as pre-eminent in the short term financing of foreign trade, with the recent demonstration of the power of sterling to dominate world price levels, it should not be difficult for the Commonwealth area to be linked monetarily to the U. S. A. area. The rest of the nations then have to follow the herd instinct or submit to sheer expediency. "There is little doubt but that the majority of South American states will come to an agreement joining their own systems upon the new conditions, or by exchange standard methods, to the Commonwealth-American scheme . . . . Should the United States arrive at a satisfactory agreement with the Commonwealth group, it is likely that most South American countries, Japan, Scandinavia and a number of European states, whose external obligations in dollars and sterling would form a principal motive, would ultimately associate themselves with the monetary concordat. In these circumstances it would be to Germany's advantage to join in too, even though France, Holland, Belgium and Switzerland may prefer to adhere to a gold standard of their present type. Germany's example would undoubtedly influence a number of other Central European and Danubian countries to follow her." And with a lengthy examination of the economic and financial position of Germany Mr. Edwards seems to establish that Germany's participation in the sterling area is also of the utmost advantage to her.

The scheme adumbrated in the book under review is only a variation of the schemes for evolving a common currency for the Empire of which we have been hearing frequently during the last two, three years. Though Mr. Edwards is very pointed and reasonable in his criticism of the alternative schemes of currency like bimetallism and symmetalism, etc., he has not added to the exposition of the theoretical aspects of a managed sterling standard. From the way in which he regards the extension of the sterling standard to practically the whole world, one is led to believe that he has no doubt about the theoretical perfection and the practical workability of a currency system administered by the Currency Board in London. It were otherwise difficult to explain the amplitude of detail with which he has describes the constitution and powers of the Currency Board. While one may remain sceptical and decline to share Mr. Edwards's enthusiasm for a Commonwealth currency, there can be no question that much of his criticism of the Report of the Gold Delegation is vigorous and valid. As a pointer of the trends of modern monetary thought, Mr. Edwards's work is well worth a careful perusal.

(*Continued from page 113.*)

rights and privileges, and with a capital reduced by Rs. 5 crores its competition would be on terms more equitable than at present and in the interests of the country.

Branches.—Under the above scheme the Reserve Bank would be free to open branches at important centres in India, and manage Government Treasuries without appointing an agent or granting monopoly for the purpose.

GENERAL.

In my first Memorandum I have already dealt with the question of deposits from Member-Banks against demand liabilities, and, in light of protests raised by almost all Banks against the very high percentage of deposits sought to be enforced, I trust Government will see the justification of fixing a percentage as not to be a hardship and at the same time be in consonance with sound banking principles.

There appear to be serious differences over the question of divorcing the Reserve Bank Directorate from the Legislatures. If the supreme controlling authority of the Reserve Bank be vested in the Central Board as suggested, there should not be any serious objection to commercial representatives being appointed Directors, even though they may hold seats on the Legislatures. It would be, however, for such individuals themselves to decide whether in view of their prolonged absence from head quarters, when the Legislatures are in session, they would be in a position to give their entire attention to the working of the Bank as would, in its interests, be so imperative. It should further be remembered that, contemplated as it is to establish the Head Office of the Reserve Bank at Bombay, if Directors are, as is probable, appointed from different parts of the country, they would naturally find it often inconvenient, if not impossible, to attend the fortnightly or monthly meetings.

Such appointments from the Legislatures by the members themselves, however, are, in my opinion, open to grave objection, in as much as they would be, oftener than not, on political lines. Merits in that case would be at a discount, and the party in power, be it Government or non-official, would seek to return its own representatives. If politics were allowed to play an important role in the appointment of Directors, it is unlikely that the Reserve Bank would be able to secure services of men with expert knowledge of finance and banking, and the Bank would not, in consequence, be in the complete confidence of the public, and its credit would be affected both in India and abroad, and Government appear to be rightly opposed to politics playing a part in the functioning of the Reserve Bank.

Whilst drawing attention to Appendix V exhibiting the strength of Indigenous Banks as compared to Foreign Banks, I would appeal to Government and the members of the Committee to imagine the parlous state that indigenous banking would be reduced to, if the Imperial Bank with its huge resources and backed up by Government support were allowed to function unfettered in direct rivalry with Indigenous Banks, in which case not only would the growth of indigenous banking be impaired, but its very existence would be in jeopardy. In conclusion, therefore, I trust, the Scheme set out above will, subject of course to such alterations therein as may be necessary to ensure its operating with success, commend itself to Government and the members of the Committee.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN

MORE FUTILITIES—AND DANGERS.

If the events of this week are in any way typical of the ultimate achievement of the statesmen at the Geological Museum, the World Economic Conference should leave the world more chaotic than it found it. With at least one definite departure from the gold standard and a not unimportant currency subject to heavy bear raids, with the franc frankly nervous, the American dollar blowing hot and cold, the gold countries issuing ultimata and Britain torn between the conflicting allegiances of a gold standard Europe and an inflationary America—the chaos of the Conference is second only to the chaos of the world which it seeks to put right. The muddle of negotiations for currency stabilisation has proved to be far worse than the public had reason to believe. It is now affirmed on all hands that a Gentlemen's Agreement had been concluded between France, Great Britain and the United States in regard to the stabilisation of currencies generally and the elimination of speculation in particular. It is believed that some of the members of the American Delegation had given their European colleagues private assurances that the American authorities would do nothing to increase the weakness of the dollar. But the boom in prices, which has been going strong since the second quarter of the year, should not be adversely affected by any commitment of theirs at the World Economic Conference. It is possible that the Administration shares the view entertained widely abroad that the inflationary movement has gone far enough and that it was more than the American Delegation could desire or hope for, and that prices should be maintained at this level. While, in this view, it is not necessary that the further depreciation of the dollar be actively encouraged any more it is yet essential that the talk of stabilisation should not interfere prematurely with the recovery of prices in the country. Arguing perhaps on these lines, the American Delegates have stipulated that the understanding, which they arrived at with France and Great Britain, should be given no manner of publicity and that, once the settlement gets wind, the Administration would consider itself free to pursue the old policy. It is in the nature of things difficult to get any formal official statements about these facts; but little doubt seems to be entertained about their substantial accuracy. The American Administration would naturally disclaim all knowledge or responsibility for any understanding that might have been arrived at by the representatives of the reserve banking system with the central banks of France and England. Their course of action would, indeed, be clearer if the agreement had been kept a secret. But once it was given publicity, the officials were naturally annoyed and, by way of forestalling an attack at home for an eminently unpopular act, let go the dollar. This in their minds seemed a vindication of their *bonafides* towards the internal economy.

The Antics of the Dollar.

The course of the sterling-dollar exchange during the week seems to bear out the foregoing interpretation of the fate of the Bankers' Conference. In spite of the repeated official declarations of the administration at Washington, that it had no intention of stabilising the currency, the dollar was remarkably steady towards the end of the previous week, and during the first two days of this week. This is widely attributed to the binding character of the Gentlemen's Agreement between the central banks and the various nations. But on Wednesday there was a spectacular slump. Opening at 4.29 the London-New York cross-rate jumped to 4.38 and continued to move upwards in New York after the closing of London. On Thursday it rose to 4.40 but towards the end it underwent a sharp decline to 4.24 and closed at 4.29½.

The Slump in Guilders.

The failure of the stabilisation plan pressed most hard on the guilder. After opening at 8.47 to the pound on Monday, the rate for guilders jumped to 8⅝ and finished at 8.58, a net depreciation on balance of over 10 cents. Three months exchange was nominally 27½ discount as against 22½ discount on Saturday. The slump in guilders is partly accounted for by a misunderstanding of what is, undoubtedly, the usual procedure of the Netherlands Bank. It is now learnt that the Bank does not pay out gold except against applications made in writing before twelve noon. As the pressure arose only after 1 p.m. no gold could be procured from the Bank; and the markets, accustomed to the sight of a depreciation below the gold point invariably preceding the suspension of the gold standard, rushed to the conclusion that Holland was about to suspend the gold standard. Later, the guilder strengthened; and on the following day the readiness of the Bank to sell gold appreciably improved the position. The Dutch premier who had come to London, and the Dutch banking interests have afforded every reassurance that the Netherlands Bank would be prepared, and could well afford, to lose considerable amounts of gold before imposing an embargo. All this has helped to restore quiet. But, it is also necessary to set the slump in guilders in the background of earlier events. It is well-known that, as a result of the developments in America, the Netherlands Bank had to suffer a drain of gold early in March last. The following table gives the gold hoardings, notes in circulation, deposits and proportion of the Netherlands Bank during each of the six months of 1933:

	Coin and bullion (Fl.	Notes in circulation (Fl.	Deposits (Fl.	Proportion*
1933	1,000,000)	1,000,000)	1,000,000)	%
Jan. ...	1,054.0	951.4	308.6	83.7
Feb. ...	1,045.7	958.6	282.5	84.3
Mar. ...	972.3	950.7	224.5	82.7
Apr. ...	928.3	1,004.8	199.6	82.0
May ...	860.2	951.9	139.4	79.8
June ...	810.9	926.5	121.7	77.7

*Proportion of coin and bullion reserves to notes and deposits.

Guilder's Earlier Trials.

It will be seen that up to March-end the note circulation was covered as to hundred per cent. by gold coin and bullion, while the proportion of the metallic reserve to note circulation and deposits was no less than 82.7 per cent. as against the legal minimum of 40 per cent. But since then the guilder has been subjected to several bear raids; and every time the bank has withstood such attacks successfully by the export of gold, principally to France. But of late the hoarding of gold has raised its head even to the extent of gold being imported from France at a premium. In the effort to strengthen the exchange value of the guilder the Netherlands Bank raised its discount rate by one per cent to 3½ per cent. early in May. That the increase in the Bank rate could not achieve its purpose is partly due to the heavy decline during the past two years in the foreign trade of Holland. It must be remembered that the Dutch guilder is only one of the two surviving gold currencies of genuine pre-war strength. With the sharp all-round changes in the currencies of the world,

Air Mail Week.

Holland has been hit severely by the competition of non-gold countries with a depreciated currency. During the first four months of the year, the decline in imports amounted to as much as 24 per cent. Thus the position was highly sensitive to changes in psychology. With the continued insistence of America and her inflationary policy and with the breakdown of the negotiations regarding stabilisation, it is natural that the guilder should have been the first among the gold standard countries to be exposed to a severe telling attack from speculative bears.

Estonia abandons Gold.

The fate of the Estonian currency has been more decisive than that of the guilder. Ever since 1931 Estonia has found that it is possible to maintain her currency on a gold basis only with great difficulty and at considerable sacrifice. She has, in common with other smaller countries who have remained on a gold basis without a free gold standard, imposed exchange control of various kinds; and this has naturally resulted in a disparity between the official and non-official rates. With the existing uncertainty, due to the fate of the principal currencies and the apparent imminence of an all-round abandonment of gold standard, Estonia has apparently considered the gold standard game not worth the candle to continue. She has decided during the week to link her currency with the Swedish kroner and this is only understandable, in as much as the difficulties of Estonia's position have been enhanced beyond the point of sufferance by the abandonment of the gold standard by Finland and the Scandinavian countries.

Britain's Embarassments.

The week's developments in regard to the principal currencies have again raised the old question of the immediate prospects of the gold standard in the countries which are still adhering to it. Now that the Gentlemen's Agreement between the United States, Great Britain and France has been definitely disowned, and the American authorities have allowed the dolar to depreciate further, the responsibility of choosing between the two alternative courses falls with greater weight than before on Great Britain. It is believed that the differences of opinion between the Treasury and the Bank of England has not increased, only because there are considerable internal differences on either side. But one can gather that Mr. Ramsay MacDonald is inclined to favour the stabilisation party, if only on the ground that stabilisation would improve the prospects of the World Economic Conference in its present stage. But, it is unfortunate that Mr. MacDonald's solicitude for the success of the Conference is not shared in any degree by either President Roosevelt or Professor Moley or his advisers. Mr. MacDonald's present policy would mean that Britain would have to break definitely with America and range herself on the side of France and the gold standard countries, thus lending strong colour to the view in America that the States are being confronted with a solid European bloc in opposition.

Treasury and Bank keep free of Commitments.

For the present, however, the official policy would seem to be to resist undue pressure either from the side of the gold standard countries or from the side of the United States. The trials of the guilder and the pressure on the franc induced the gold standard countries to draw together more closely and to attempt to induce the British Government to assure them of the support of the Bank of England, in the event of their currencies being exposed to the danger of being divorced from gold. During the middle of the week it was believed that the Bank of England might be obliged to support foreign currencies and the Exchange Equalisation Fund would have to carry out transactions in foreign exchange markets at its own risk with a view to the preservation of the last remnant of the gold standard. But ultimately the forces of prudence would seem to have asserted themselves; and even the question of a sterling credit, like the one extended to France for £30 million has been ruled out as impracticable.

Ultimatum and Agreement!

This stiffened the backs of the gold standard countries; and the gold nations met in a secret meeting at the Geological Museum and passed resolutions affirming their intention to defend the gold standard to the last ditch and entrusting M. Bonnet with the task of acquainting Mr. MacDonald in unmistakable terms their determination to leave the Confer-

ence if it was powerless to secure the stability of currencies. On Friday the gold countries, Great Britain and Professor Moley agreed on a tripartite formula and sent it to President Roosevelt for his approval. The proposed agreement is in three parts: (1) the gold standard countries declare their firm adherence to the standard; (2) countries on the gold standard have accepted the principle of stabilisation and (3) the central Banks of the countries concerned are to take steps to put an effective stop to all speculation in currencies. It will be seen that the formula has been framed more with a view to secure an all-round acceptance than to solve the problem on hand.

No Answer from Mr. Roosevelt.

Commenting on this, the *Financial News* writes: "Ultimately, there would be one way in which central banks, in a position like the present, could be said to be checking speculation that would be if, by active intervention in the exchange market, they took steps to counteract any exchange movement which did not appear to be a reflection of some change in the currency's real economic value. But can we imagine America, with her expressed theoretical interests, agreeing to such an interpretation in practice? The trouble is that the experts have found not a plan for the solution of the existing cleavage of opinion but an ingenious formula by which that cleavage could be decently retained." Even to such a formula the acceptance of President Roosevelt could not be had. The daily newspapers gave sensational accounts of the search for the President conducted by four aeroplanes and the anxiety with which the delegates to the World Conference were awaiting the news from America. But the week closed with no distinct answer and the question of stabilisation is still as unstable as ever.

Monetary Sub-committee.

With the principal problem of the Conference subject to such serious mishaps, it is not to be expected that the other committees would have made any appreciable progress. The monetary sub-commission entrusted with the permanent measures could report no progress in behalf of its sub-committees. The silver committee stands substantially where it stood at the end of last week, and the Technical Questions Committee reported two points of agreement only, one in regard to gold not being required for internal circulation, and the other in regard to the sufficiency of a 25 per cent. ratio for central banks cover, with the proviso, of course, that the resulting increase in the proportion of "free" gold must not be taken as an excuse for unduly building up a superstructure of notes and credits. That this resolution marks no practical advance, so long as it is not clear what the various governments would be doing to implement this resolution, is too obvious to need any explanation. One debate of the Monetary Sub-committee on Immediate Measures, perhaps, requires special reference. Discussing the question of international debts, Mr. Chamberlain, following the speaker on behalf of the debtor nations, pointed out the necessity for adjustment of their relations between debtor and creditor nations, consistent with the preservation of the confidence of investors, and pointing to the need for a Council of Foreign Bond holders, as has been in existence for a long time in Great Britain. Senator Couzens, speaking for America, was distinctly more realistic in his remarks as he urged the importance of changes in the debt structure of the world, which can be effected only by an increase in prices and the adjustment of debts, in both of which America has given a significant lead to the rest of the world.

Economic Sub-Committees.

The proceedings of the Economic Sub-commission betray the tendency of each nation to accept the general principles of international trade and, at the same time, to press for special considerations, each in its own case. Germany, for instance, urged the claims of a policy of reconstructing the national economic system. France while accepting the harm done by shipping subsidies, contended that there are special cases in which they should be regarded as a legitimate means of building national marine. In the same way, the suggestion that the French quota system should be modified in the absence of currency stabilisation was also stoutly resisted. In all this, the powers have taken the cue from Mr. Neville Chamberlain, who, in his initial statement at the Conference, said in effect that all quota systems are to be condemned, except such as he has helped to impose in his own country, which are in accordance with a plan for the regulation of production and marketing.

The talks behind the scenes of the World Economic Conference regarding the restriction of production for commodities like wheat and sugar are understood to have been conducted in a distinctly more businesslike manner; but here, the unwillingness of the European importing countries to make changes in their tariffs or quotas in return for the sacrifice of the producing and manufacturing countries has proved to be an effective stumbling block. The only welcome development is that Australia is believed to have agreed to the scheme formulated by Canada and the United States. Perhaps, the one country which is fully justified in declining to follow the schemes adumbrated here is India, whose representatives leave no room for doubt that their country is not prepared for any sort of restriction on the programme recently adopted of expanding the cultivation of sugarcane and the manufacture of sugar.

UNITED STATES OF AMERICA

THE DOLLAR AND THE MARKETS

The week is singularly free from any striking developments in American politics. And in business, too, it is only true to the type that has become familiar since the decision to abandon gold and devaluate the dollar. There was the same rise in stock and commodity prices with an exhibition of nervousness now and then and consequent relapses and a recovery therefrom towards the end. Administratively, further attempts have been made to apply the various legislative measures which Congress passed during the last session to facilitate the recovery of national economy. Foremost in this programme stands the Industrial Recovery Act and the formulation, and approval by Government, of codes of fair competition. General Hugh Johnson, who has been entrusted with the administration of the Recovery Act, has pointed out in an announcement that the whole programme will be a failure, if the majority of industries in the country did not put their codes of fair competition into effect within the next few months. Failure to do so, he says would cause serious maladjustments of prices in different group products. He hoped that a number of the larger industries would enable the administration to set the seal of its approval on their codes within a month or two.

Competition Codes and Labour Demands.

The few instances, in which the codes have been formulated with great expedition, point to the possibility of considerable controversy over the codes. The American Federation of Labour has already issued an appeal to all unorganised labour to organise itself so as to take advantage of the industrial recovery legislation. If differences either between the industry and the administration or between employers and employees should prove to be general, General Johnson would find it difficult to keep the rate of progress he has mentioned in his statement. So far as the cotton textile industry is concerned, it was pointed out last week that a minimum wage and maximum hours had been definitely provided for. But at the hearing before the Industrial Recovery Act Administration in Washington it is believed that the representative of labour would oppose many of its provisions. The employees object to the 44 hour week and to the economic wage of 10 dollars per week provided for the industry in the South. The formation of company unions in non-union areas is another grievance which labour leaders would try to ventilate at Washington. The right of labour to organise itself is specifically provided for by the Act and, in all likelihood, the Administration will give in to the demands of labour in this regard. At the hearings of the Cotton Textile Institute, it is reported, a compromise was reached on the question of wages. The minimum has been raised by 2 dollars per week to 12 dollars for the South and 13 dollars for the North. But maximum hours are still a bone of contention between the rival parties.

Reduction of Acreage.

The next important piece of legislation which is sought to be put into effect with the least delay is the Farm Relief Act. It is reported that a credit of 70 million dollars has been granted to the Secretary of Agriculture by the Reconstruction Finance Corporation for the purchase of all the cotton at present held by the Federation Farm Board. The Secretary, it is said, will also use part of the credit for subsidising these farms and agree to restrict agriculture. So far as the plans in regard to wheat are concerned, it is certain that the authorities will be considerably helped in their endeavours by the shortage of the present wheat crop. It is by now certain that the crop is damaged beyond repair, and that, as a result, the efforts of the administration to raise the price of wheat have better prospects of success than before.

Spurt in Commodity Prices.

Prices, as has been pointed out earlier, have been on a steep upward trend, with small setbacks now and then. Trading on Saturday June 26, was, on the whole, very irregular. The inability of the market to move into higher ground was evident, despite short spasms of strength or activity. And this induced an attitude of caution which is unhelpful to the improvement in prices. On Monday the stock markets gained a new access of strength from the spurt in commodity prices. Wheat prices in Chicago shot up by 7 cents per bushel while New York cotton gained 85 points. The trading in the wheat market must be attributed to the news of a crop failure particularly in the Northwest where the spring wheat crop has been badly damaged. Add to this the determination of the Administration to reduce the acreage and we have a big bullish factor making for high prices and firm markets. It is said that the Department of Agriculture is to cut out a quarter of the present cotton crop and similar vigorous action is to be applied to wheat.

Wall Street Ponders Stabilisation.

Taking its cue from the commodity markets Wall Street rose sharply on Monday with 6 point rises being generally widespread and the turnover amounting to as much as 4,530,000 shares. Tuesday saw another sharp rise in wheat of 8½ cents in New York and of 105 cents in May Futures in Chicago. Cotton, however, fell back after the sensational rise of the previous day but other commodities were very strong, tin gaining 65 points, coffee 18 points and sugar 10 points. But Wall Street was featureless and the feeling is strong that the markets are still too sensitive to unfavourable reports. On Wednesday, wheat had a setback of as much as 5 points and Wall Street was even weaker. But it is certain that the wild fluctuations of the dollar on Thursday will not

Air Mail Week

interfere with the market's attitude and psychology, though stocks were very hesitant and most issues came back and closed lower. Reports of beneficial rains in many sections of the spring-wheat areas have also interfered with the wheat markets.

Is Stabilisation nearer?

The antics of the dollar on Thursday has, on the whole, had a sobering effect on American public opinion on the question of stabilisation of currencies. It had no marked adverse effects on stock and commodity prices. Trading was, no doubt, lower, as most persons were unready to operate in the markets so long as the outlook remained so severely unsettled. The fact that, on the present occasion, internal prices have not been so sensitive to the developments in the exchange market suggests the possibility of the American Administration being prepared to modify its attitude towards the question of stabilisation. There is, for the first time, a recognition of the danger of goading the gold standard countries to abandon gold and join the general race for currency depreciation. In such a position, it is natural that public opinion is not in a mood to frown on the Administration for their efforts at stabilisation of currencies. The Guarantee Trust Company, for instance, points out in its *Survey* that the lack of stability in the dollar is the least favourable element in the American economic situation, though the plan for a gold *bloc* abroad is incompatible with the price-raising programme of the Administration. Considering the rise in prices since this was written, it is certain that there will be more supporters for the view that the time is not very far when America must actually consider the question of stabilising the internal as well as the external value of the dollar.

Improvement in Business.

The improvement in business conditions has continued during the week, though not at the same pace. Rail-road earnings continue to be encouraging. The Missouri Pacific reports its May operating income at 676,907 dollars compared with 291,973 dollars in May, 1932 and its gross income of 5,845,329 dollars compares with 3,503,772 dollars. The Southern Railway Company has a gross income for May of $6.5 million as compared with $5.8 million. The Rail-road Co-ordinator continues his efforts to secure economies in the operative expenses of rail-roads, leaving the question of financial reorganisation of the weaker lines to a later stage. In the rate case now ending, the Railroads are to present arguments in general before the Inter-States Commerce Commission. But it is expected that the decision would urge selective reductions in rates with a view to stimulate revival of trade. Car loadings for the week ended June 17 total 587,900 cars representing an increase of 23,400 cars as compared with the previous week and 69,500 cars with the corresponding week of the previous year. The iron and steel industry is considering the increase in prices from 2 to 6 dollars per ton in order to offset the 10 per cent. advance in wages now under contemplation. The week is important for the revival of the alcoholic beverage and accessory stocks. The movement gets its impetus from the State of West Virginia which has decided by an overwhelming majority in favour of the repeal of the 18th Amendment. As Virginia was originally one of the driest States in the dry South, its vote has been interpreted as the death-knell of prohibition. The stocks of these concerns and such others as can turn to the production of beer and other beverages have risen sharply in the stock exchanges.

Record High for Public Debt.

In the background of apparently encouraging developments in trade and industry, the shadow of unbalanced public finance is growing in increasingly threatening manner. On June 30, the United States closes its fiscal year and the net result is a revenue deficit of $1,750 million. The Government have borrowed to meet this deficit and the public debt has, as a consequence, risen to $22,500 million which is the highest point since 1922. The public debt per capita comes to about $180 as compared with 155.85 in 1931-32. The income for the year amounted to $2,200 million and expenditure 3,950 million. It is noteworthy that the advances made to the Reconstruction Finance Corporation amounting to $1,250 million are not included in the deficit. For the next financial year, 1933-34, revenue and expenditure are expected to balance at $2,750 million but here, too, the schemes of public works involving $3,300 million are left out of account. When they are met by new borrowing, the public debt will have been increased to still more dizzy heights.

CANADA.

BETTER BUSINESS CONDITIONS.

According to the Monthly Review of the Bank of Montreal a marked improvement in the volume and tone of Canadian trade, both foreign and internal, and in general employment in the Dominion has taken place in recent weeks. The improvement has not reached all industries and in some it is not very pronounced, but it is encouraging that the long continued fall in prices and production has been arrested.

In May, bank debits, which give a fair index of the development of business, were at their highest point since November, 1931.

The motor car manufacturing industry last month had the largest monthly output for two years.

Some improvement in the timber industry is indicated by the higher export figures and rail consignments, in both the eastern and the western divisions of the country, which have reached their highest point this year.

The revenues of both railway systems are beginning to reflect in some measure the better tone in business, the weekly figures for most recent weeks showing an improvement on the corresponding weeks last year.

Freight carried on Canadian canals in May amounted to 2,337,000 tons, compared with 2,236,000 in May last year.

Reviving confidence is indicated by reports on wholesale and retail trade all over the country. A steady, if moderate, improvement is reported from nearly all urban centres, "a distinct improvement" being announced by Montreal and Vancouver.

Bank clearings at Montreal for the week ended June 15 were 23 per cent. above those for the same week last year.

The production of steel ingots and direct steel castings in May was 231,928 tons, the best total since January. Exports of nickel ore, matte, and speiss in May amounted to 45,676 cwt., valued at $826,000, compared with 18,452 cwt., valued at $332,000, for May, 1932. Exports of fine nickel last month are valued at $816,000, compared with $384,500 for May last year.

Crops in Western Canada are still in a rather critical state. Fairly general rain last Friday appreciably relieved the situation, and, fortunately, further rain is promised by the weather forecasts. The grasshopper menace continues in many sections of the Prairie Provinces, but the poison bait campaign has greatly helped to combat this pest.

THE RESERVE BANK OF INDIA BILL (1927).

How Indigenous Banks stand to suffer in view of the privileges intended to be given to the Imperial Bank.

By

S. N. POCHKHANAWALA,

Managing Director, The Central Bank of India, Limited, Bombay, (India).

MEMORANDUM A.

At the request of some of the Members of the Select Committee recently appointed in connection with the Reserve Bank Bill I have drawn up this Note to invite their attention to certain disadvantages under which Indigenous Banks would have to work and to show how far the interest of these banks would suffer by the establishment of the Reserve Bank in addition to the Imperial Bank, which would continue to function invested with certain special powers and privileges that are proposed to be given to it under the new Reserve Bank of India Bill. I should, besides, be failing in my duty if I did not, at this juncture, make the Members of the Committee conversant with the changes that the banking structure of this country would undergo in light of the proposed Reserve Bank Bill and how far the interests and prospects of Indigenous Banks in India would be affected thereby.

I should mention at this stage that these Memoranda seek to give my personal views only, and these have been based on the assumption that a Bill somewhat similar to the last Reserve Bank Bill will be placed before the Committee for discussion and approval.

I have also been requested by friends to formulate a scheme whereby reforms pertaining to finance under the new constitution, as contemplated, could be carried out at a minimum of expenditure and with the least difficulty, without the establishment of the new Reserve Bank and consequent additional burden on the tax-payer.

Very often, in well-informed circles, the question is asked whether or not it would be possible to transform the existing Imperial Bank of India, by eliminating its commercial banking departments in a way as would satisfy the public in general and the commercial community in particular, and the bank's own shareholders, into a body able to take the place of the Reserve Bank. My views on this subject are set out in Memorandum B.

Banking business in India, as constituted at present, may be divided thus :—

(1) Imperial Bank ;
(2) Foreign Exchange Banks ;
(3) Indigenous Joint Stock Banks ;
(4) Co-operative Banks ;
(5) Indian bankers *e.g.*, Sowcars, Multanis and Chettyars.

The interests of the Imperial Bank, Foreign Exchange Banks and Indigenous Banks are very closely interconnected, and, as matters stand, the latter are working at a great disadvantage. It is desirable, therefore, that proper safeguards should be introduced in the Reserve Bank Bill, if Indigenous Banks are to assert themselves in the midst of keen competition which is sure to result from the establishment of the Reserve Bank.

With the setting up of the Reserve Bank, the banking group will be divided as follows in order of merit :—

(1) Reserve Bank ;
(2) Imperial Bank ;
(3) Foreign Exchange Banks ;
(4) Indigenous Joint Stock Banks ;
(5) Co-operative Banks ; and,
(6) Indian Bankers.

Thus, with the advent of the Reserve Bank, Indigenous Banks would occupy in the banking group a position subordinate to the present.

The Reserve Bank will stand the highest, acting as the Central Bank in the country and will remain in charge of its currency and note-issue. It will be a depository of Government funds, will control credit and act as the bankers' bank. If, under the Reserve Bank Bill, it is allowed to receive deposits at interest, make advances to the public and discount bills of parties other than banks, the business of the Imperial Bank and Indigenous Banks is bound to suffer.

It is the Imperial Bank with which Indigenous Banks will be vitally concerned under the Reserve Bank scheme. As soon as the Imperial Bank gets relegated to a secondary position through the establishment of the Reserve Bank, it would naturally endeavour to consolidate its position by removal of its existing restrictions and by securing all possible rights and privileges to be in a position to get all the business, at present confined to Indigenous Banks, by offering better terms. Indigenous Banking, therefore, would be faced with a situation difficult to meet, unless provided with proper safeguards. The Imperial Bank will, presumably, act as Agent to the Reserve Bank at places where the latter has no branches and will continue in charge of Government Treasuries at such stations, receiving compensation for this work from the Reserve Bank. The Imperial Bank will hence enjoy facilities and privileges from the Reserve Bank and continue to retain the prestige of being a Government depository at certain stations. The restrictions under which it carries on commercial banking business at present will be removed, rendering it free to compete with Foreign Exchange Banks in their Import and Export business and with Indigenous Banks in their local business of receiving deposits, discounting bills, making advances, etc. The Imperial Bank, no doubt, will lose a portion of Government deposits, but it will be partly compensated for such loss through an interest-free deposit of Rs. 3 crores intended to be transferred to them by the Reserve Bank. With the reputation of being Agent to the Reserve Bank it will continue to receive deposits at cheaper rates, and with a huge capital and reserve at

its disposal and the Reserve Bank at its back, the Imperial Bank will naturally be the master in the banking field in India, and will be in a position to dictate its own terms to Indigenous Banks.

The Foreign Exchange Banks, however, will be more independent of the Imperial Bank than at present, in as much as they will find in the Reserve Bank a better supporter than the Imperial.

Advantageously placed as the Imperial Bank would be, it would attract a major portion of the local business of Indigenous Banks by offering better terms and extending greater facilities. Its extensive resources would be used to the detriment of Indigenous Banks only, since Foreign Exchange Banks would obtain cheap money through their Head Offices, enabling them thereby to withstand any competition from the Imperial Bank. It is even possible that these banks may join hands with the Imperial Bank and work to their mutual interests. It is, therefore, necessary that Indigenous Banks should be allowed special privileges to enable them to hold their own against the acute competition of the Imperial and Foreign Banks.

Due to restrictions imposed on it under the Act, the Imperial Bank of India, unlike other Banking Institutions, is debarred from transacting certain kinds of banking business. Owing to these restrictions, Indigenous Banks have a wide field of banking and are able to get a fair share of commercial and industrial business of the country. If the Reserve Bank be allowed to receive deposits at interest, make advances even against securities or discount bills of parties other than its Member-Banks, the business of the Imperial Bank and leading Indigenous Banks would considerably be impaired.

Banking conditions in India are different from those prevalent in other countries, and, therefore, demand special consideration. What may hold in other countries may not do for India. Mr. Benjamin Strong, Governor of the Federal Reserve Bank of New York, prominently brought this fact out before the Royal Commission. (*Vide* Appendix II, Page 47).

In no other country do Foreign Banks have such a sway over the country's Import and Export business as in India, and perhaps in no country in the world does there simultaneously exist a Central Bank and a semi-government bank in the field to compete with smaller Indigenous institutions. To take an analogy, should there be established in London, besides the Bank of England, a Central Bank and a dozen other powerful Foreign Banks with branches all over the country to control the Import and Export business of the United Kingdom, and should the Bank of England, as Agent to the Central Bank, be extended certain rights and privileges and allowed to establish branches all over the country and set free to do all kinds of banking business, it would be easy to imagine the plight that the indigenous institutions would be reduced to, in spite of their great strength and solidarity.

As Agent to the Reserve Bank, the Imperial Bank would sustain its present prestige and would be gaining a particularly formidable position for borrowing and lending at advantageous rates, and, being in charge of the Government Treasuries at different centres, it would be the drawing and remitting agency of the Reserve Bank, using a portion of its funds for banking purposes and would demand from the Indigenous Banks for transferring funds from one part of the country to another, rates that would make their "bills-purchased" business unremunerative.

The Imperial Bank now enjoys a monopoly of having funds of public bodies deposited with it only in certain Provinces. With the establishment of the Reserve Bank it is possible that the monopoly may be extended to other provinces as well, and, with the support of the Reserve Bank, it might render impossible for Indigenous Banks to obtain deposits from corporate bodies like Municipalities, and the Port and Improvement Trusts.

The following extract from a letter from one of the Provincial Governments explains the situation, and will, I hope, make the Members of the Committee realise its gravity :—

> "With reference.....I am directed to say that the Government (Ministry of Local Self-Government) have on several occasions recently had under consideration questions relating to the deposits of Municipal funds in private Banking Institutions, and have with some regret reached the conclusion that it is impossible for Government to authorise such deposits in any Banks other than the Imperial Bank or the Co-operative Banks established under Co-operative Societies Act, 1912. The main reason that has influenced the Government in arriving at this conculsion is that if Government once agreed to deposits in any Bank other than the Banks named above, it would be impossible to say where the line should be drawn."

It seems the financial advisers to the said Government cannot determine the merits of Banking Institutions, Indigenous and Foreign, other than the Imperial Bank of India.

Under the Reserve Bank Bill, if the Scheduled Member-Banks be required to deposit 7½% of their demand liabilities and 2½% of their fixed deposits with the Reserve Bank, it would bring in a sum of about Rs. 3 crores from Indigenous Banks alone, with loss of interest thereon to them.

In all Central Banks of the world these deposits are considered as a nucleus of their general resources which would enable them to control the credit situation. In the Reserve Bank Bill it has been proposed to lend Rs. 3 crores free of interest to the Imperial Bank which would mean indirectly handing over the entire deposits of the Indigenous Banks to the Imperial Bank and enable it to compete further with the same Indigenous Banks in their business. It would not be surprising, therefore, if the Imperial Bank, with these formidable advantages, succeed in ousting Indigenous Banks, monopolising to itself sound banking business in different parts of the country. Even now Indigenous Banks suffer to a great extent from competition put up by the Imperial Bank, and, except in big cities and towns, branches of Indigenous Banks are unable to make any headway against it.

The Imperial Bank, I must say, has been, at present, partly functioning as a Central Bank, affording help to an extent, when needed. The competition set up by it, however, by virtue of its position, is particularly cutting. It is of the nature of a trader, who, having secured his wares scot-free, is in a position to undersell them in competition with other *bonafide* traders. If Government were to collect statistics of the working of Indigenous Banks and of the Imperial Bank at places where both have their branches, they would soon find how poorly Indigenous Branch-banking has always fared.

The trade and industry of every country thrives through the help of Indigenous Banks, which form an important entity in its banking system. It is but proper, therefore, that indigenous banks in India should play the same prominent part, and to enable them to do so their interests should be adequately protected by proper safeguards in the Reserve Bank Bill.

The following are a few suggestions in this direction :—

(1) The Reserve Bank should be allowed to act as the Bankers' Bank, and not enter into competition with scheduled Member-Banks.

(2) It should open accounts and receive Call-Deposits free of interest.

(3) Term deposits may be allowed from Scheduled Member-Banks only.

(4) It should discount Bills bearing endorsements of Scheduled Member-Banks only, to the

extent of 50% of their Paid-up Capitals and Reserves.

(5) The Discount Rate of the Reserve Bank for Member-Banks should be 1% under the official Bank Rate. (As is well known, the Bank Rate in India is not identical with the Discount Rate, but represents the Rate at which the Imperial Bank makes advances against gilt-edged securities.)

(6) The Reserve Bank should not appoint any Bank as its Agent, but should open its own offices at necessary centres to manage Government Treasuries. At smaller centres it should entrust the Treasury work to Member-Banks against adequate securities and at competitive rates.

(7) The Reserve Bank should make advances against securities to Scheduled Member-Banks only at a uniform rate of 1% under the official Bank Rate, so that the margin in their favour may enable them to make advances at Bank Rate to their constituents.

(8) The Reserve Bank should treat the Scheduled Member-Banks alike and no special facilities or privileges or preference of any kind be accorded to any particular Member-Bank.

(9) The Scheduled Member-Banks should deposit in cash with the Reserve Bank 5% of their demand liabilities under Call and Current Accounts deposits, 3% of Savings Bank Accounts deposits and 1½% of period deposits.

(10) For the first 10 years 50% of the above deposits should be in cash and 50% in Gilt-edged securities, so far as Indigenous Banks are concerned.

(11) These deposits may be placed by the Member-Banks as may suit them at Head Office or at any of the Branches of the Reserve Bank.

(12) The Reserve Bank should sell Telegraphic-Transfers throughout the country at par to Scheduled Member-Banks.

(13) The Reserve Bank should buy T.Ts. or Drafts of Scheduled Member-Banks at par, commensurate with their deposits against demand and term liabilities.

(Clauses 12 and 13 are essential for the protection of Indigenous Banks, as otherwise they would be entirely at the mercy of the Imperial Bank and Foreign Banks for such remittances and drawings to and from their Head Offices and Branches in different parts of the country.)

(14) The Reserve Bank should be invested with powers similar to those allowed to the Imperial Bank under the Imperial Bank of India Amendment Act, 1924, to enable it to help sound banking concerns in cases of emergency. (This is of vital importance for the protection of Indigenous Banks.)

(15) The Imperial Bank should be registered under The Indian Companies Act.

The term of ten years of the Imperial Bank's contract with Government having expired, an extension has been granted without charging, in the interests of tax-payers, any premium for facilities and privileges they enjoy from Government and for the free use of their funds. In the Bill of 1927 the unexpired term of four years of their contract was a serious consideration in the minds of those responsible for the Bill. This consideration now no longer exists, and in all fairness to Banks in India the Imperial Bank's past services to Government must not be recognised in a manner antagonistic to the very principles of a Central Bank in relation to its members by special facilities and privileges being granted only to one at the cost of others. For aught I am aware, this has never been the case with other Central Banks and it would not be proper to allow this in India where Indigenous Banks, most of them still in their infancy, are working as it is at such a great disadvantage, and striving to do their bit for the commercial and industrial development of the country.

As to the constitution of the Reserve Bank, I would invite the attention of the Members of the Committee to Appendix I, which is an extract from the Memorandum submitted by The Central Bank of India, Ltd., to the Indian Central Banking Enquiry Committee.

Appendices II, III and IV represent the views submitted by leading Indigenous Banks on the Gold Standard and Reserve Bank of India Bill(1927).

In Appendix V is furnished, for the ready reference of the Members of the Committee, a comparative statement of figures of Capitals and Reserves of Foreign Banks functioning in India and those of Indigenous Banks with Capitals and Reserves over £100,000/- each. A study of this statement will prove conclusively the comparatively weaker position of the Indigenous Banks in relation to the Imperial Bank of India and other Foreign Banks.

Appendix VI will show the vastly unequal conditions under which Indigenous Banks have to struggle in the midst of the redoubtable competition offered by the Imperial and other Foreign Banks. I am sure, similar conditions do not exist in any other country, and it is, therefore, of the utmost importance that those responsible for framing the constitution of the Reserve Bank should have these facts before them, as the collosal figures of capitals and reserves of the Imperial and other Foreign Banks show how very necessary it is for Government to save Indigenous Banks from being relegated to obscurity by giving them a fair chance and by ensuring for them a safe place in the future development of Indian Banking.

MEMORANDUM B.

A scheme to convert the existing Imperial Bank of India into (1) The Imperial Reserve Bank and (2) The Imperial Bank of India, Limited.

It is the future relationship of the Reserve Bank to the Imperial and Joint Stock Banks that is, in my opinion, of supreme importance in the future development of Indian Banking, and it is therefore that I am confining myself in my Memoranda to the case of Indigenous Banks only, without going into the other details of the Bill.

The Imperial Bank of India, as at present constituted, discharges, amongst others, the following functions of a Central Bank:—

(1) It is a depository of Government funds, being in charge of Government Treasuries at a considerable number of stations in India;

(2) It is the principal depository of Banks, Railways, public and corporate bodies;

(3) It conducts the Bankers' Clearing House;

(4) The Public Debts of the Government of India and other Provincial Governments are managed by it;

(5) It controls the money market and credit

to a certain extent by determining the Bank Rate ;

(6) It discounts bills ;

(7) It receives deposits free of interest.

In order, however, that it should function as a purely Central Bank, some modifications are necessary in its present constitution. It would not be difficult to divide the present Imperial Bank into two separate entities—(1) The Imperial Reserve Bank to carry on the functions of a Central Bank ; and (2) The Imperial Bank of India, Ltd., to continue the commercial banking business of the present Imperial Bank of India.

As suggested by the Central Bank of India, Ltd., in its Memorandum to the Indian Central Banking Enquiry Committee (Appendix I), the Reserve Bank should not, for reasons set out therein, raise its capital on joint-stock principles, and I suggest that the capital of the Reserve Bank, whether the latter is formed independently or through conversion of the Imperial Bank of India into a Reserve Bank, should be in 4½% (tax-free) debentures guaranteed by Government.

Capital.—The Imperial Bank of India has at present a Capital and a Reserve of about Rs. 11 crores. A sum of Rs. 5 crores therefrom should form the capital of the "Imperial Reserve Bank" and Rs. 5 crores, the capital of the "Imperial Bank of India, Ltd., which should be registered under the Indian Companies Act.

Every holder of one Rs. 500/- paid-up share or four Rs. 125/- paid-up shares of the Imperial Bank of India would be entitled to one Debenture of Rs. 500/- of the Imperial Reserve Bank and one Rs. 500/- paid-up share in the Imperial Bank of India, Ltd. Balance remaining after the allotment of the above issues would be treated as the reserve of the Imperial Bank of India, Ltd.

If Government be not prepared to guarantee the Debenture Issue of the Reserve Bank, and should the latter be established as a shareholders' bank, shares may be issued in place of debentures to the present Imperial Bank shareholders, subject to dividend on these shares being limited to a maximum of 5% (tax-free) and subject to the control of a *Central Board,* in addition to another directorate to be appointed for the Imperial Reserve Bank. The issue whether in debentures or shares will not, I think, materially affect the working of the Imperial Reserve Bank, provided a maximum rate of dividend be fixed. The obligatory payment, however, of dividend throughout its existence would inflict a permanent liability on the tax-payer, whereas in the case of debentures this liability would be extinguished on their being paid off. Besides, in a Bank promoted by shareholders they would lay claim to the Reserve Fund created out of profits, whereas, in the case of a debenture issue such Reserve would be the property of the State. Personally, I do not think it advisable to promote a Reserve Bank of shareholders, since the representation on the Board of Directors would be more or less guided by undue influence to the exclusion of the best type of men. Though the statutory right of appointment of Directors vests in shareholders, in practice such right is exercised primarily by the promoters of a company.

One of the two Managing Governors of the Imperial Bank may act for the Imperial Bank of India, Ltd., only, and the other for the Imperial Reserve Bank, assisted by a Deputy Governor well versed in International finance. Such a combination would be a distinct asset in the banking system of the country. The existing staff of the Imperial Bank could be split up amongst the Imperial Reserve Bank and the Imperial Bank of India, Ltd., according to the requirements of each. Thus, the Imperial Bank of India, Ltd., would work at a greatly reduced expenditure, the Reserve Bank deriving besides the benefit of acquiring an experienced and a trained staff.

Diretors.—The present members of Local Boards of the Imperial Bank of India at Bombay, Calcutta, and Madras would continue to act as such for the Imperial Bank of India, Ltd.

The question of the composition of a Directorate of the Imperial Reserve Bank would need serious consideration. I still hold that, in order to efficiently manage the Reserve Bank, the members of the Central Board should be men free from Government and political influences and be experts, well-conversant with the commercial, economic and financial conditions of the country and of those abroad.

In the Memorandum submitted by the Central Bank of India, Ltd., to the Indian Central Banking Enquiry Committee (Appendix I) the details of such a system have been set out at length.

In a country like India where the interests of the Reserve Bank, the Imperial Bank, the Foreign Banks, the Indigenous Banks and the Co-operative Banks are so closely inter-connected, an ordinary Board of a shareholders' Bank, concerned more or less only with the interests of the shareholders, would scarcely do justice to important questions relating to commercial and financial interests of the country. An ordinary Directorate, with all endeavours to make it representative, would be considerably influenced, if not entirely dominated by the banking expert at the head of the institution, or by the Financial Adviser to the Governor-General-in-Council, with the result that the banking structure of the whole country and its financial policy and credit system would virtually rest in a single hand. The real utility of the Reserve Bank would rest in the success of its financial, currency and credit policy. I cannot, therefore, urge too strongly the necessity of the Reserve Bank being guided by the independent and expert advice of the Central Board in successfully tackling currency and financial problems that are sure to arise, consistent with the interests of the country and the aspirations of its people, during the next few years.

The Directorate of the Reserve Bank would, as suggested in Appendix I, have to look after the internal affairs of the Bank alone, severed entirely from the policy and other higher problems pertaining to currency, credit and finance. They may hold fortnightly or monthly meetings, and deal with questions arising from routine business only of the Bank at the Head Office and its branches, and should be directly responsible to the Central Board.

The entire banking and financial system of the country would thus be under the guidance of expert independent advisers on the Central Board of the Reserve Bank working with a singleness of purpose to do good to the country and its people. Its Chairman would make an annual report to the Legislature on the general policy of the Bank on lines similar to those on which the Federal Reserve Banks' Reports are submitted at present.

The Imperial Bank of India, Limited.—It would be seen from above that the question of Capital for the Reserve Bank should not present any serious obstacle if the existing Imperial Bank is to be converted into a Central Bank. The capital of the Imperial Bank of India, Ltd., may be fixed at Rs. 5 crores, with authority to it to do all commercial banking business.

The liabilities and assets of the Imperial Bank, which at present appertain to shareholders, would continue as such, and all benefits accruing out of the assets would continue to be vested in them even under the new arrangement.

The commercial community would find no difficulty through this change, and its members as well as the general public would continue to be served as heretofore through the medium of the Imperial Bank of India, Ltd. *In the new Imperial Bank of India, Ltd., the Indigenous Banks would, no doubt, find a redoubtable competitor, but shorn of special*

STATISTICAL INFORMATION

FOREIGN TRADE OF KARACHI.

The statistics of the foreign trade of the port of Karachi for June, 1933, issued by the Collector of Customs, show that the total value of imports (merchandise) amounted to Rs. 91 lakhs, a decrease of Rs. 65 lakhs and that of exports to Rs. 1,28 crores, an increase of Rs. 46 lakhs as compared with the figures for June, 1932. The progressive totals for the quarter ending June, 1933, show a decrease of Rs. 56 lakhs or 15 per cent. under imports, but an increase of Rs. 44 lakhs or 16 per cent. under exports.

Comparative figures of the principal imports and exports for June, 1932 and 1933, are given below:—

Imports.

In June, 1933.

	Quantity. Tons.	Value. Rs.
Cotton manufactures		21,95,998
Metals and ores		5,68,100
Machinery and mill work		6,54,655
Woollen goods		3,19,723
Liquors		4,04,354
Oils		3,33,759
Cotton, twist and yarn		5,353
Sugar	6,384	7,11,077
Vehicles		5,39,839

Increase or decrease as compared with June, 1932.

	Quantity. Tons.	Value. Rs.
Cotton manufactures		−35,38,761
Metals and ores		−8,29,099
Machinery and mill work		−7,69,151
Woollen goods		−2,54,295
Liquors		−22,570
Oils		−19,507
Cotton, twist and yarn		−15,085
Sugar	+1,978	+2,69,529
Vehicles		+1,70,717

The decrease under cotton manufactures occurred in receipts of white and coloured goods. Imports of white goods amounted to 8 million yards valued at Rs. 13 lakhs as against 21¼ million yards valued at Rs. 36 lakhs, while those of coloured goods totalled 1⅛ million yards valued at Rs. 3 lakhs as against 8¾ million yards valued at Rs. 17 lakhs in June, 1932. Imports of grey goods at 2⅛ million yards valued at Rs. 3 lakhs showed an increase of nearly 1½ million yards in quantity and Rs. 2 lakhs in value. The total imports of cotton piecegoods during the quarter ending June, 1933, amounted to nearly 60 million yards valued at Rs. 97 lakhs, showing a decrease of 17 per cent. in quantity and 25 per cent. in value, as compared with the corresponding period last year. The share of the United Kingdom in the total imports of cotton piecegoods during the first three months of the current official year was 47⅓ million yards valued at Rs. 80 lakhs, a decrease of 18 per cent. in quantity and 25 per cent. in value, while that of Japan was 12 million yards valued at Rs. 16 lakhs, a decrease of 3 per cent. in quantity and 18 per cent. in value, as compared with imports in the corresponding period of 1932-33. The decrease under metals was most noticeable in receipts of iron or steel pipes, tubes and fittings, wrought from Germany, steel bars from Belgium and Luxemburg, galvanized sheets from the United Kingdom, brass mixed or yellow metal for sheathing from the United Kingdom and Germany and copper sheets from Germany. Imports of machinery decreased mainly as the result of reduced arrivals of electrical machinery from the United Kingdom. The decrease under woollen goods occurred in receipts of yarn and knitting wool from Poland and Germany and piecegoods from France. The increase under sugar was shared by Java sugar and loaf sugar from Belgium. The total quantity of sugar imported during the quarter ending June, 1933, was 18,604 tons as against 18,707 tons in the corresponding period last year. Larger arrivals of motor cars from the United Kingdom and motor lorries (chassis) from Canada and the United Kingdom were responsible for the improvement in imports of vehicles.

Exports.

In June, 1933.

	Quantity. Tons.	Value. Rs.
Cotton, raw	18,458	95,11,250
Wool, raw (Indian and foreign) ...	1,113	8,32,342
Skins, raw	455	4,24,620
Hides, raw	175	99,603
Rapeseed	6,341	7,06,858
Barley	3	197
Wheat flour	407	43,488
Wheat	30	2,869

Increase or decrease as compared with June, 1932.

	Quantity. Tons.	Value. Rs.
Cotton, raw	+11,118	+63,07,501
Wool, raw (Indian and foreign) ...	+885	+6,00,922
Skins, raw	+288	+2,60,664
Hides, raw	+130	+72,251
Rapeseed	−8,409	−12,99,012
Barley	−11,557	−7,32,631
Wheat flour	−1,120	−1,09,034
Wheat	−19	−1,119

The increase under cotton occurred in shipments to Japan, the United Kingdom, Italy, Germany and the Netherlands. The total quantity of cotton exported during the quarter ending June, 1933, was 47,204 tons (264,345 bales) as against 23,765 tons (133,082 bales) in the corresponding period of 1932-33. The improvement in exports of wool was due to increased shipments to the United Kingdom and the United States of America. Larger purchases of goat skins by the United States of America mainly accounted for the increase in exports of raw skins. The drop under barley was due to the United Kingdom having made no purchases during the month under report as against a purchase of 11,535 tons valued at Rs. 7 lakhs in June, 1932. The decrease under rapeseed was most noticeable in shipments to Italy which took only 20 tons as against 10,000 tons in June, 1932.

FOREIGN TRADE OF SIND.

The Report on the maritime trade of Sind during 1932-33 shows that the Province continued to suffer from the effects of the general depression which still holds the world in its grip. The progressive decline in purchasing power reduced the demand for goods to the minimum, and exchange restrictions and tariff barriers tended to curtail the volume of international trade.

Both the foreign and coasting trade of the Province showed a further decline, the former to the extent of Rs. 1,08 lakhs or 3 per cent. and the latter to the extent of Rs. 3,26 lakhs or 18 per cent., the net result being a contraction of Rs. 4,34 lakhs or 9 per cent. in the total trade as compared with the previous year, which itself was a year of great depression.

Foreign imports receded by Rs. 31 lakhs or 2 per cent., but the decrease was confined to imports of Government

JUBBULPORE ELECTRIC SUPPLY CO., LTD.

NOTICE

is hereby given that the Thirteenth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Saturday, the 22nd July, 1933, at 11-5 a.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the Half-Year ended 31st March, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 14th July, 1933 to the 22nd July, 1933, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated Calcutta, the 10th July, 1933.

stores. Imports on private account (i.e., excluding Government stores) increased by Rs. 51 lakhs or 3 per cent. A brisk business in cotton piecegoods and woollen manufactures largely contributed to the recovery in the trade. Increases on a smaller scale also occurred under instruments, hardware, paper, artificial silk, chemicals and drugs, haberdashery and soap. The increase was, however, to a great extent offset by notable decreases under mineral oils, sugar, machinery, metals, rubber manufactures, motor cars and lorries, provisions, arms and ammunition and tobacco. Foreign exports decreased by Rs. 77 lakhs or 6 per cent., the articles most responsible for the fall being wool, raw hides and skins, rice, barley, wheat and wheat flour. In fact, shipments of wheat ceased entirely. A redeeming feature was the welcome expansion in shipments of rapeseed, the value of which rose from Rs. 71 lakhs to Rs. 1,49 lakhs or by 110 per cent. Shipments of cotton, gram, pulse and bones also improved somewhat. The decrease of 6 per cent. under foreign exports mentioned above would have been much greater but for the large shipments of gold, the value of which expanded from Rs. 7 lakhs in 1931-32 to Rs. 63 lakhs during the year under report.

An event of great economic importance was the Empire Trade Agreement at Ottawa. The effects of the mutual preference enjoyed by certain empire goods from January, 1933, as the result of this agreement will no doubt begin to be felt during the course of the coming year.

Coasting imports declined by Rs. 2,59 lakhs or 23 per cent. owing mainly to reduced arrivals of Indian cotton piecegoods from Bombay, which alone accounted for a fall of Rs. 2,21 lakhs. Coasting exports contracted by Rs. 67 lakhs or 10 per cent.: mainly the result of decreased shipments of cotton to Bombay and Madras and wheat to Bombay, Calcutta and Burma. The new Salt industry of Karachi showed further progress, shipments to Calcutta having increased from 30,905 tons to 33,505 tons.

The United Kingdom retained the premier position in both the import and export trade, her transactions with the port representing a share of 39 per cent. of the total trade with foreign countries as against 40 per cent. last year. Japan, which came next, raised its share of the total trade from 11 to 13 per cent., the big jump from 5.52 per cent. to 9.58 per cent. in her quota of the import trade being particularly striking. The continued depreciation of the Yen and the resultant uneconomic prices at which Japanese goods of all descriptions, particularly cotton piecegoods, were offered for sale gave a stimulus to the trade.

The gross collections of Customs duty rose from Rs. 5,65 lakhs to Rs. 6,26 lakhs, showing an increase of Rs. 61 lakhs.

The Lloyd Barrage and Canals, which were formally opened in January, 1932, have brought immense areas of waste land under cultivation. Regular irrigation from these canals commenced from the **kharif** season of 1932, and over one million acres were cultivated. The **rabi** sowings are reported to be good, and it is anticipated that about one million acres will be brought under cultivation.

TRAVANCORE EXPORTS.

From the Export Trade Statistics of the Port of Aleppey for the month of May, 1933, published by the Travancore Chamber of Commerce, it is seen that, in spite of the severe economic depression, the trade of Travancore in the principal commodities of export has not suffered so badly as was anticipated.

The decrease in coir yarn from 299,801 cwts. to 272,616 cwts. is solely due to the fall in exports to Indian ports. The United Kingdom, Germany, Belgium, Holland and Italy continue to be the principal buyers in Europe. Although imports into the United Kingdom and Belgium have fallen, this has been compensated for by increased imports into Germany and Holland.

Although the quantity of pepper exported during the 11 months has increased by over 27,000 cwts. prices have slumped mainly owing to the lack of buying power. During the 11 months in 1932-33 European Ports have consumed only 22,960 cwts.. whilst the Indian Ports have drawn 114,811 cwts. Compared with the 11 months previous there is a decrease of nearly 2,000 cwts. in exports to European Ports whereas an increase of 29,400 cwts.; is recorded in the exports to Indian Ports.

The price of copra during May was firmer rising from Rs. 48-49 per candy in the first week to Rs. 53 per candy towards the close of the month. But compared with the price in May, 1932, the fall in price is very heavy the average in May being Rs. 65-66 per candy.

The United Kingdom has been the principal buyers of tea as hitherto and this year (1932-33) has seen an increase in the shipments of over 175,000 lb. The prices for South Indian Tea during May were also satisfactory, the average being 11.2d. per lb., during the first week of May and 10.5d. per lb., towards the close of the month.

There was considerable fall in the quantity of rubber exports. During May, especially towards the last week, rubber was somewhat active and business was done at 3 17/32d. per lb., in forward sales. October-December as against 3¼d. per lb., in the middle of May, 1932.

FOREIGN TRADE OF ADEN.

The number of merchant vessels over 200 tons that used the Port of Aden in May, 1933, was 112 as compared with 122 in the corresponding month last year and the total tonnage was 488,000 as compared with 523,000.

Excluding coal, salt, fuel oil and military and naval stores and transhipment cargo, the total tonnage of imports in the month was 10,000 and of exports 5,700 as compared with 6,900 and 5,200 respectively, for the corresponding month last year.

The total value of imports excluding Government stores was Rs. 51,11,000 as compared with Rs. 38,18,000 for May, 1932, and of exports Rs. 29,28,000 as compared with Rs. 27,78,000.

The total value of both imports and exports together was Rs. 80,39,000 as compared with Rs. 65,96,000.

Imports during the month were above those for May, 1932, in the case of coffee, grain and flour, hardware, seeds, skins raw, sugar, piecegoods printed or dyed, twist and yarn, tobacco unmanufactured and manufactured and treasure private; and below in the case of gums and resins, hides raw, piecegoods grey and white.

Exports were above those for May, 1932, in the case of grain, pulse and flour, seeds, skins raw, sugar, piecegoods printed or dyed, twist and yarn, tobacco unmanufactured and manufactured and treasure private, and below in the case of coffee, gums and resins, hardware, hides raw, piecegoods grey and white.

FOREIGN TRADE OF PORT OKHA.

The total import of merchandise at Port Okha during June, 1933, amounted to 10,048 tons, valued Rs. 7,48,457, consisting of 252 tons Sugar, valued Rs. 25,360, 302 tons G. C. and G. P. Sheets, valued Rs. 19,216, 7,332 tons Coal, valued Rs. 1,31,976 and Machinery, etc., valued Rs. 5,71,905. The total export during the same period amounted to 11,175 tons, consisting of 7,503 tons Salt, 2,010 tons Cement, 1,425 tons Cotton, 101 tons Seeds, 136 tons Magnesium Chloride, etc. The number of vessels that entered the Port was 12.

The total import during the corresponding period amounted to 1,707 tons, valued Rs. 4,66,642, consisting of 10 tons Sugar, valued Rs. 2,000, 189 tons G. C. and G. P. Sheets, valued Rs. 30,279 and Machinery, etc., valued Rs. 4,34,363. The total export during the same period amounted to 10,708 tons, consisting of 2,003 tons Cement, 8,529 tons Salt, 170 tons Seeds and 6 tons Skins, etc. The number of vessels that entered the Port was 8.

AGRA ELECTRIC SUPPLY CO., LTD.

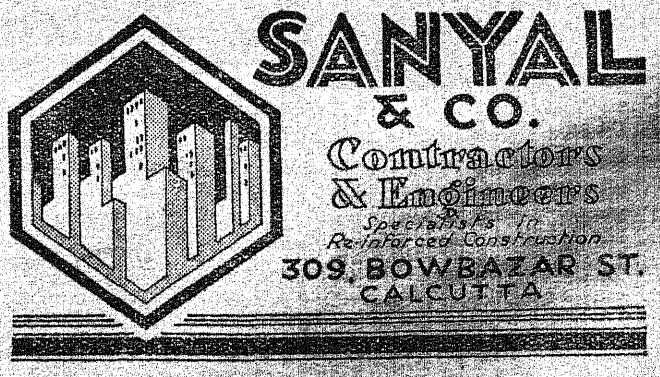
NOTICE

is hereby given that Sixteenth Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Saturday, the 22nd July, 1933, at 11-0 a.m. for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the Half-Year ended 31st March, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 14th July, 1933 to the 22nd July, 1933, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

Dated Calcutta, the 10th July, 1933.



COMPANY REPORTS

IMPERIAL BANK OF INDIA.

We are informed that the Governors of the Imperial Bank of India at the Meeting of the Central Board held at Bombay on Monday, the 10th instant, declared a dividend to shareholders for the half-year ended 30th June, 1933, at the rate of 12 per cent., per annum, payable on and after the 17th July, 1933.

The profits available including Rs. 25,45,700 brought forward from the previous half-year, amounted approximately to Rs. 63,67,400 which sum was disposed of as follows:—

I.	Payment of a Dividend of 12 per cent. per annum—Free of Income Tax ...	Rs.	33,75,000
II.	Transferred to Reserve Fund ...	,,	2,50,000
III.	Transferred to Pension Fund ...	,,	47,600
	Carried forward to next half-year	,,	26,94,800
	Total ...	Rs.	63,67,400

The average rate for Demand Loans during the half-year was 3.627.

MURPHULANI (ASSAM) TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets	Rs.
Capital ...	5,00,000	Block	4,97,671
Debts	51,942	Crop A/c. ...	32,550
		Outlay ...	2,314
		Outstandings ...	2,799
		Cash	344
		Profit & Loss ...	16,264
Total ...	5,51,942	Total ...	5,51,942

Extracts from Directors' Report:

Reporte covers Season 1932.

After providing for depreciation, Revenue Account shows a loss of Rs. 8,969-11-10, and after making sundry adjustments there is a balance of Rs. 16,263-10-4 at debit of Profit and Loss Account.

Crop—A crop of 1,788 maunds was manufactured which sold at annas 8-8 per lb. comparing with 1,585 maunds 16 lb. made in the previous season, for which an average of annas 9-5 per lb. was realized.

Climatice conditions were generally unfavourable, a long drought in the early part of the season being followed by a spell of cold and wet weather. Blights also were prevalent, thread blight setting in after the rains began, in a particularly severe form.

Planted Area—This was increased by 2.63 acres, and now totals 301.74 acres.

Estimates—For the current season provide for a crop of 1,446 maunds at a revenue cost of Rs. 54,458 at the Garden and Rs. 30,519 in Calcutta.

HUMAYAN PROPERTIES, LD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	4,50,700	Goodwill ...	2,04,840
Debentures ...	5,70,000	Block (net) ...	10,50,693

Other Debts ...	2,49,683	Outstandings ...	24,344
Profit & Loss ...	17,691	Investments ...	2,491
		Cash & Deposits ...	4,646
Total ...	12,88,874	Total ...	12,88,874

Extracts from Directors' Report:

Report relates to the ear ending 31st March, 1933. There is a balance in Revenue Account of Rs. 98,188-9-5 which is carried to the Profit and Loss Account. After payment of Debenture Interest and standing items and after providing the sum of Rs. 43,965 for Depreciation, there is a balance of Rs. 17,691-7-2 which is carried forward.

The Company's business for more than half of the year under review was carried on under special difficulties in regard to film supplies owing to defaults on the part of the contractors, and the new contracts had not then come into operation, but by the end of 1932, when the new policy became fully effective, the position became, and has continued to be, quite satisfactory.

The amount paid to Government for Entertainments Tax during the year amounts to a total of Rs. 50,479-6-0. In addition to this amount the Company has to pay a very heavy Customs Duty on each film entering the country.

As before stated, the position to-day in regard to film supplies is satisfactory and your Directors have negotiations in progress for developing the supplies of British films. The quality of the films has improved considerably and it is interesting to note that the special films made for the Company are amongst the most popular of the items shown.

As films are now being purchased outright, it has been necessary to organise a circuit and we are gradually bringing this into full working as the number of films increases. It is not proposed to seek additional capital for financing this side of the Company's activities, but the Management is utilising revenue for this purpose.

As the Shareholders are aware, the Managing Agents of the Company, Bandmann Varieties Limited, have gone into liquidation, and to meet this, their duties are now in accordance with the amendments made in this Company's Articles of Association, carried out and discharged by an Executive Committee of the Directors.

TELIAPARA TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets	Rs.
Capital ...	4,50,000	Block ...	4,65,000
Reserve ...	4,65,000	Crop A/c. ...	1,02,376
Debts ...	12,846	Stores ...	22,606
Profit & Loss ...	1,99,207	Outstandings ...	6,173
		Cash and Invests.	5,30,898
Total ...	11,27,053	Total ...	11,27,053

Extracts from Directors' Report:

Report covers the year ended 31st December, 1932, which show the following results:—Teliapara profit Rs. 42,697-10-1, Satchurie profit Rs. 6,117-8-7, total profit Rs. 48,815-2-8.

On transfer of above to Profit and Loss Account and after sundry adjustments there is a balance at credit of that account of Rs. 1,99,207-4-9.

Dividend—The Directors recommend that a dividend of 15 per cent. be declared at the Annual Meeting, leaving Rs. 1,31,707-4-9 to be carried forward.

Crop—The outturns of tea and the average selling prices realised compare with those of the previous year as follows:—

Crops.	1932	1931
Teliapara ...	7,408 maunds.	6,650 maunds.
Satchurie ...	3,347 ,,	3,101 ,,
Average selling prices per lb.	1932.	1931.
Teliapara ...	4 annas 11 pies.	5 annas.
Satchurie ...	4 ,, 5 ,,	4 ,, 5 pies.

Weather was favourable throughout the season, but a severe attack of mosquito blight curtailed the Satchurie crop.

Planted Area—The total area under cultivation remains at 1,165 acres, being 768 acres at Teliapara and 397 acres at Satchurie.

Estimates for 1933, provide for a total crop of 9,900 maunds for an outlay of Rs. 2,16,843 including Inland Freight and Sale Charges.

GUZERAT RAILWAYS CO., LD.

Synoposis of Balance Sheet:

Liabilities.	Rs.	Assets	Rs.
Capital ...	34,50,000	Block ...	51,65,512
Debentures ...	18,00,000	Outstandings ...	2,32,241
Other Debts ...	1,51,005	Cash ...	24,858
Profit & Loss ...	1,09,738	Investments ...	88,102
Total ...	55,10,743	Total ...	55,10,743

Extracts from Directors' Report:

Report covers the year ended 31st March, 1933.

Coaching Traffic—Shows a welcome improvement in the number of passengers carried which are the highest in the past six years. The increase has chiefly occurred on the Nadiad-Kapadwanj Section, on which 99,610 more passengers than last year were booked. The Godhra-Lunawada Section also showed some increase but there was a falling off in passengers on the Champaner-Shivrajpur-Pani Section. On the Nadiad-Kapadwanj Section the cheap fares in force continued to attract passengers to the Railway and the train service was also augmented by one train each way with effect from 7th November, 1932, which met with an encouraging response. The total earnings from Coaching Traffic for the three lines, though better than last year, are not so high as previously due, of course, to the reduced fares.

Goods Traffic—Whilst there has been an improvement on the Nadia-Kapadwanj and Godhra-Lunawada Sections in the quantity of merchandise carried and the earnings

derived therefrom during the year under review, a very serious decline has again occurred on the Champaner-Shivrajpur-Pani Section owing to a further fall in the despatches of Manganese Ore, the market for which is in a very depressed state and shows as yet little or no signs of a revival.

Accounts—The results of working the three Sections of your Railways including Rebate available for the year, show an excess of receipts over expenditure of Rs. 58,298-12-6 to which must be added the sum of Rs. 51,438-14-4 brought forward from last year's Accounts, making Rs. 1,09,737-10-10 in all. No ad-interim dividend was declared, and the Directors propose to apply the sum available for disposal as follows :—Dividend for the year ended 31st March, 1933, at 2½ per cent. per annum, payable less Income Tax Rs. 86,250, balance to be carried forward Rs. 23,487-10-10, total Rs. 1,09,737-10-10.

JAYBIRPARA (DOOARS) TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	3,50,000	Block ...	3,57,226
Reserve ...	1,70,664	Outlay ...	3,993
Debts ...	7,459	Outstandings ...	26,433
		Cash & Deposits ...	36,009
		Investments ...	95,000
		Profft & Loss ...	9,871
Total ...	5,28,123	Total ...	5,28,123

Extracts from Directors' Report:

Report relates to Season 1932.

Revenue Account shows a loss of Rs. 7,754-3-1, and after transferring the sum of Rs. 10,159-12-0 from Reserve Fund, providing for Depreciation, and making sundry adjustments, there remains the sum of Rs. 9,870-9-5 at debit of Profit and Loss Account.

The sum shown previously as working Capital has been transferred to a general Reserve Fund.

A crop of 3,604 maunds was obtained which sold for an average of annas 5-1 per lb. compared with 4,144 maunds sold at annas 5-11 per lb. in the previous year.

Climatic conditions generally were fairly favourable for growth, but with the early appearance of mosquito blight, crop was considerably reduced.

The planted area remains unaltered at 607 acres.

Provisional Estimates for 1933, have been framed for a crop of 3,788 maunds at a revenue cost of Rs. 76,108 at the Garden and Rs. 34,804 in Calcutta.

INDIAN IRON & STEEL CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	1,44,01,600	Block (net) ...	2,09,80,706
Debentures ...	67,63,391	Stocks ...	3,59,869
Reserves ...	37,79,385	Stores, etc. ...	9,59,908
Other Debts ...	9,09,979	Outstandings ...	8,58,536
		Cash & Invests.	26,76,314
		Profit & Loss ...	18,956
Total ...	2,58,54,355	Total ...	2,53,54,355

Extracts from Directors' Report:

Report covers the year ended 31st March, 1933. The result after allowing for Depreciation and Interest and Sinking fund for the Company's 7½ per cent. Debenture Lnao shows a loss of Rs. 40,564-11-4, the Credit Balance brought forward from last year has been deducted from this loss, Rs. 21,608-5-6, to carry forward the balance of loss of Rs. 18,956-5-10.

The production of pig iron and bye-products at your Works was on a restricted scale throughout the year. Stocks of pig iron have been reduced to a minimum.

Stocks of raw materials remain at the lowest point consistent with the safe operation of your Works.

In order to conserve the Company's cash resorces as far as possible the Directors have arranged with the Debenture-holders for a further Moratorinm of the Debenture Sinking Fund for a further period of three years.

The Debenture-holders have also agreed to the extension of the life of the Debentures for a period of five years and the cancellation of the provision for an increase in the amount of the Sinking Fund which was made when the the operation of that Fund was suspended without a corresponding extension of the life of the Debentures.

As part of the consideration for these concessions the Company has agreed to increase the price at which the Debentures will be drawn for the Sinking Fund and the price at which they are payable at maturity from par to 102½ per cent. and to increase the price at which they are repayable in any other event to 105 per cent. The Company has also agreed that it will not pay any dividends during the period for which the Sinking Fund is suspended.

The world's markets for pig iron continue to be unsatisfactory and tariff walls make sales exceedingly difficult to effect. Shipments continue to Japan but at unsatisfactory prices. The Ottawa Agreement is operating satisfactorily.

The outlook for the coming year is obscure, but the Directors anticipate it will be possible to continue operations on a restricted scale.

BANK OF HINDUSTAN, LD.

Synopsis of Balance Sheet:

The balauce sheet is as under :—

Liabilities.	Rs.
Capital ...	10,00,000
Contingent Fnnd ...	19,570

Sundries ...	24,692
Investments ...	1,95,041
Cash ...	6,62,150
Total ...	35,64,964

Report relates to the half-year ending 30th June, 1933.

Loss of Half Currency Notes—The Directors regret to report that the loss in course of transit by post of cut halves of Currency Notes amounting to Rs. 17,500, reference to which was made in the last report of the Directors, has since been written off, out of the balance of last year's profit brought forward, as the Government of India, Finance Department to whom the Bank appealed in the matter, refused to interfere and change the unfavourable decision already given by the Currency Authorities. Under the circumstances the loss had to be written off as shown in the Balance Sheet.

Branches—During the half-year under Report, a sub-office of the Bank was opened at Tellicherry (N. Malabar) on 22nd January, 1933, and the Branch at Kumbakonam had to be closed on 15th April, 1933. The working expenses of both the Offices have been written off from the Profit & Loss Account of the half-year

CHAPARMUKH-SILGHAT RAILWAY COMPANY.

Extracts from Directors' Report:

The directors of the Arrah Sasaram Light Railway Company submit the audited accounts of the company for the half-year ended March 31, 1933. The route mileage of line open for traffic at the end of the half-year was 65.31 miles. The total capital expenditure to the close of the half-year was Rs. 25,01,265 plus Rs. 18,592 on stores, etc., or Rs. 25,19,857 in all. Capital expenditure during the half-year nil. The gross earnings during the half-year were Rs. 1,62,836. During the corresponding period in 1932 they were Rs. 1,70,217. The decrease was Rs. 7,381 or 4.34 per cent. The balance available for distribution is:—Nett profit, Rs. 36,042; balance brought forward, Rs. 52,851; total Rs. 88,893. The directors recommended that the balance be disposed of as follows:—Payment of a dividend of Rs. 4 per share at the rate of 4 per cent. per annum less income-tax, for the year ended March 31, 1933, costing Rs. 72,084; balance to be carried forward Rs. 16,809.

PATERSON ENGINEERING CO., LD.

The Company which supplies equipment for the purification of water, was registered in Scotland in 1902 and has been carried on as a private company with an authorized capital of £3,000. As its business expanded its resources were increased out of profits, and the last balance-sheet, dated 30th April, 1933, shows reserves and "carry-forward" amounting to £99,258, the issued capital being only £2,100. On 14th June last the business was converted into a public company, with a capital of £100,000, bulk of the reserves being capitalized in the form of Ordinary shares of 10s. each, of which 135,000 have recently been offered for sale. Mr. William Paterson, who founded the business, has entered into an agreement to act as chairman and managing director of the new company for five years. For the year to 30th April trading profits were £20,175, but including other receipts net profits were £27,638. The gross dividend was £12,600, the balance carried forward being £61,711.

EASTERN ASSAM TEA CO., LD.

The net profit fell from £30,140 in 1931 to £9,875 in 1932. The directors have transferred £500 to income-tax reserve, and, as already announced, they recommend a dividend of 5 per cent. (against 12½ per cent.), which will leave £27,523 to be carried forward (against £28,010 brought into the accounts). The crop harvested amounted to 2,914,602 lb. (against 2,941,980 lb.). The average price realized was 9.84. per lb. (against 1s. 0.11d.), and the cost of production was 9.19d. per lb. (against 9.84.).

DOOARS TEA CO., LD.

The crop in 1932 was 5,267,556 lb. (against 3,876,847 lb.) being the largest since 1919, with the exception of 1929. The gross sale price fell from 10.42d. to 8.27d. a lb., but the garden cost was the lowest for many years at 6.32d. (against 10d.) a lb. Results were better than at one time expected, and the profit for the year comes out at £20,806, compared with a loss of £9,732. Adding the adjusted balance brought forward of £6,461, there is available £27,267. The Preference dividend takes £5,250, and transfers are proposed of £10,000 (against nil) to replacement and improvements reserve and £1,500 (against nil) to provident fund, leaving £10,517 to be carried forward. Again no Ordinary dividend is declared. Floating assets, £229,600; current liabilities, £46,000.

FAIRBAIRN LAWSON COMBE BARBOUR LD.

The accounts for 1932 show a loss of £52,050, before providing for the deferred interest on Debenture stock, Notes, or bank advances, but after providing for losses incurred by subsidiaries during the year. For 1931 there was a loss of £45,821 after meeting interest charges. In June last year Debenture and Note holders agreed to postpone payment of interest until 1st July, 1934. There is now a total debit balance on profit and loss (including interest accrued under the moratorium) of £266,718.

The Directors report that the turnover during 1932 was on a very low basis, due to the world-wide depression in the textile industries, while owing to keen competition for the limited amount of orders available there was a further reduction in prices. Because of the reorganization in shops and machinery the Directors have again considered it unnecessary to make any special provision for depreciation. No provision has been made for a loss on the sale of redundant capital assets during the past two years, it being proposed to deal with this loss in a capital reorganization scheme in due course.

The Directors state that the financial position of the Company has given them great anxiety and they have been in consultation with the Company's bankers and their financial advisers. As a result of these meetings formal application was made to the bankers for further financial assistance and the bank have agreed to provide further moneys under certain conditions. As these points affect the holders of Debenture stock and Notes, meeting of these respective stockholders was held on 29th June, and letters stating these conditions are being sent to stockholders.

ATTOCK OIL CO., LD.

A recovery is shown by the accounts for 1932. There was a profit for that year, after writing off well-boring expenditure, but before providing for depreciation on plant, of £20,457, which compares with a loss of £111,296 for 1931. After providing £40,000 (against £55,000) for depreciation, the net loss for the year is £19,543 (against £166,296), which reduces the credit balance to go forward on profit and loss account from £28,064 to £8,521. The provision for deprecaition is less than that charged in previous years, but, having regard to the substantial amounts provided in the past, the board consider that the total provision made to date represents an adequate allowance for ordinary wear and tear. In the balance-sheet oil stocks, debtors, and cash total £226,000, against creditors for £48,000.

The improved results, states the report, are accounted for by an increase in sales of refined products and by reduction in expenditure on drilling. The increased sales have to a small extent been made at the expense of reserve stocks of crude and refined products.

During the year a high rock pressure water-bearing zone has been struck below the high pressure zone at 4,600 ft. to 4,800 ft., and it has not yet been possible to drill through this deeper zone pending the arrival on the field of further high pressure fittings. These are due shortly, when deep testing operations will be resumed. Meantime the drilling programme at Khaur has been curtailed and has been confined to exploiting the sands down to 4,600 ft. to 4,800 ft. These operations during the year were moderately successful, resulting in a slight increase in production compared with 1931, but since the close of the year new production obtained so far has not been sufficient to offset the decline in old producers. Production from 1st January to the end of May, 1933, has amounted to 46,800 barrels. A new test well has recently been started at the outfield at Dhulian, where the previous deepest test attained a depth of 3,602 ft. without striking oil. The new well to date has reached a depth of 335 ft. Only minor operations were undertaken at Khaire Murat, which field, on results to date, has not been proved a commercial producer.

SUGAR CONFERENCE

WHAT IT DID AND WHAT IT FAILED TO DO

From the way in which the deliberations of the Sugar Conference, which met recently in Simla, were conducted, no definite conclusions were possible as regards the various steps to be taken for the stabilisation of the industry, the advancement of the interests of the sugarcane growers, and the protection of the consumers. The chief outcome of the Conference is a free and full exchange of ideas on the various issues raised by the rapid growth of the sugar industry in India. Thanks to the enterprise and thoroughness of Mr. R. C. Srivastava, the Sugar Technologist with the Imperial Council of Agricultural Research, the members who attended the Conference were provided with full and exhaustive information and statistics on all relevant topics connected with sugar. Only brief summaries have appeared in the daily papers of the documents presented at the Conference. We have, therefore, deemed it advisable to reproduce, elsewhere in this issue, more copious extracts from the papers made available to the Conference members. Whether any action should be taken by the Government in the matter of zoning or fixation of minimum price was a question on which there was considerable difference of opinion amongst the members. The case for such action is ably stated in a memorandum by Mr. Noel Derr who has considerable experience of the Indian sugar industry both in the United Provinces and Bihar, and whose memorandum in this connection is published on another page. The difficulties in the way of any such action being taken were brought out by Mr. Prior, the Revenue Secretary of the Bihar Government; and his speech, which also appears in this issue, merits careful study. The material furnished in this number is calculated to enable the readers to clarify their ideas on the extent to which action is needed and the limit of such action. It is obvious that owing to the growing importance of sugar manufacture in the industrial life of this country, the large sums that have been put out by investors, and the unique combination of the interests of the grower and the manufacturer in this particular industry, there should be quite frequent occasions in the near future when the problems connected with sugar will be hotly discussed from the points of view of the various interests affected. It is of the utmost importance that while, on the one hand, the vested interests, which are a powerful well-organised body, do not monopolise all the benefits accruing from the high protection now accorded, unthinking solicitude for the interests of the agriculturists and the consumers should not lead to any hasty or ill-considered action by the State.

On the question whether there has been an excessive development in regard to sugar manufacturing concerns, the general sense of the Conference would appear to be, as indicated by Mr. D. P. Khaitan, that there was distinctly overcrowding in North Bihar and United Provinces; and that in provinces like Bombay, Madras and Bengal, there was considerable scope for new enterprises. This is a view which *Indian Finance* has been urging for quite a long time. We are glad that this bogey of overproduction has been given a quietus. In the course of the memorandum of Mr. R. C. Srivastava, he admits that a forecast of future consumption is difficult as this depends upon several factors, the most important amongst them being the future price level of sugar and the economic condition, or purchasing power of the people. The following table amply proves that provided the price of sugar is low, the consumption of sugar would show considerable expansion:

Year.	Yearly average price of Java Sugar in Calcutta. (Rs. per Md.)	Consumption of sugar in India. (Tons).
1923-24	18 0	678,081
1924-25	14 4	859,057
1925-26	10 15	1,011,488
1926-27	11 14	999,302
1927-28	10 7	1,101,524
1928-29	9 13	1,164,805
1929-30	9 0	1,324,923
1930-31	8 11	1,215,585
1931-32	10 1	982,540
1932-33	10 10	928,095

It will be seen that the consumption of sugar reached the highest point during 1929-30 and 1930-31 when the prices were the lowest. As the present margin of profit to the manufacturers is on the large side, there could be a fair measure of decline in sugar prices without the industry being adversely affected to any appreciable extent. Such decline in prices is inevitable, in fact, as soon as the full force of the competition amongst the large number of new concerns makes itself felt. As Mr. Srivastava obvserves,

> **"In the case of sugar made in India, which has lost its parity with Java sugar during the last year, there is every prospect of a sharp decline in prices when the four dozen new factories under construction this year commence manufacturing during the next season. The experience of the season which is just finished shows that most of the new factories were obliged to sell sugar at any price for want of warehouse accommodation and also in order to raise funds for paying instalments of the price of machinery and for completing the building. If, as appears likely, this is repeated next**

season also, the price of sugar is certain to decline. Moreover, as production comes closer to consumption, sugar will have to be transported to distant markets, the high freight charges to which, will result in a lower ex-factory price level".

In the light of all these considerations, Mr. Srivastava comes to the conclusion that the indication for the immediate future appears to be a lowering of sugar prices, and, in consequence of this, an increase in consumption may be looked for.

Moreover, it should never be forgotten that Mr. Srivastava's apprehensions of production over-taking consumption were based on the assumption that the consuming capacity of India would be on the basis of 1932-33 level. Everyone will agree that this particular year witnessed economic distress of an acute kind and of a widespread character. The calculations in regard to the consumption of sugar should be based on the figures of a year in which the economic conditions amongst the masses were of a normal kind. From this point of view, it would be safer to assume that the normal consumption of sugar in India would be nearer the 1929-30 figure than the 1932-33 figure. We should, therefore, think that far from production exceeding consumption by 6,000 tons by 1934-35, there would still be a leeway of anything like 200,000 tons to be made up.

Even if our hope of any improvement in the economic conditions of the masses is not realised, there can be no doubt that the cheapening of sugar, which is admittedly inevitable, is bound to result in increased consumption.

On a careful perusal of the various papers submitted to the Conference and the speeches made thereat, we regret that no serious attempt was made to tackle the two most important problems in regard to sugar. These two problems are: (1) What steps can be taken by those connected with the sugar industry in conjunction with the Government for securing better results as regards sugarcane cultivation; (2) In reference to molasses, is there anything that can be done for utilising this and thereby increasing its value? Dr. Gokul Chand Narang, Minister for Industries of the Punjab, drew the attention of the Conference to the fact that while India gives an yield of 13 tons cane per acre with 8½ per cent. sugar therein (that is, one ton of sugar per acre), Java gives an yield of 50 tons of cane per acre with 12 per cent. sugar therein (that is, six tons of sugar per acre). It was also brought out at the Conference that in the case of certain areas in the Bombay Presidency, the percentage extraction of sugar was 12 per cent. and that the yield of cane per acre was far higher than the average reached in Bihar and the United Provinces. It follows that it is not outside the range of possibilities to improve the methods and conditions of agriculture in such a manner as to secure results approximating those of Java.

It is true that improved types of sugarcane are being increasingly introduced in Northern India. But there are various other ways in which intelligent and comprehensive action is required so as to enable the agriculturists to get the maximum results. An inefficient agricultural industry cannot be the basis of a stable manufacturing industry, especially as in the case of sugar, there is so much of fundamental connection between the agricultural side and the industrial side. We are disappointed, from this point of view, that the Conference did not arrive at any practical programme for the improvement of the agricultural methods and conditions.

In the Tariff Board report, the assumption is made that the factories should be able to dispose off their molasses at Re. 1-8. Molasses is, in to-day's conditions, practically unsaleable at any price. In this connection, we wish to draw pointed attention to the proposition sponsored by Mr. D. P. Khaitan that facilities should be given to the manufacture of pure alcohol from molasses; and that legislation providing compulsory admixture of petrol with a prescribed proportion of power alcohol manufactured from molasses should be enacted. This suggestion

Pure Vegetable Carbon

MOUSELL & Co LD

MERCANTILE BUILDINGS CALCUTTA

found unanimous support. We are, however, absolutely in the dark as to the intentions of the Government on this question.

We may be told that the Finance Member has already lost a considerable slice of revenue on account of the lower customs receipts from the shrunken sugar imports; and that he would not be prepared to make any further sacrifice in the interest of the already well-protected sugar industry. As it is, the Government are deriving a good revenue from petrol. If it is to be stipulated that petrol should be admixed with, say, 30 per cent. of power alcohol, the excise duty realised on petrol would suffer a 30 per cent. reduction. On a superficial view, this argument seems quite reasonable. But we do not see any reason why an excise duty could not be levied on the production of power alcohol on a scale that would result in the proceeds of this revenue being more or less equivalent to the loss from the excise duty on petrol.

There may be set up a few central distilleries for extracting power alcohol; a fixed price of 8 annas to 12 annas may be decided on as the rate at which all the sugar conpanies within a particular territory should be obliged to sell their molasses to the distillery; the power alcohol production will be subject to an excise duty, the scale of which will depend upon the amount of revenue that has to be raised for making up the leeway.

We may go so far as to suggest that the Government themselves can set up a few distilleries of this kind at suitable centres. In which case, the income of the Treasury will not be from excise duty but from the profits made in the production of power alcohol. We do believe that a concrete scheme could be drawn up if the industrialists and the Government authorities were to sit down for an earnest consideration of this problem.

To the extent that the sugar manufacturers are able to derive some measure of profit from the sale of molasses, they would either be able to offer a better price for sugarcane or to lower the price of sugar. We are now assured that extremely competitive conditions will begin to prevail in the sugar market. The sugar companies will not be able to form any ring for an artificial maintenance of high prices. In view of such competition, the consumer is bound to be greatly benefitted. The benefit to the consumer will even be greater if the manufacturer is helped to derive an additional income from the sale of molasses.

So far as this question of the stipulation of the admixture of petrol with power alcohol is concerned, there is nothing new or strange in the suggestion. Quite a good many countries have enacted the compulsory use of power alcohol in petrol. Petrol, by such mixing, is all the better, cleaner and more economical.

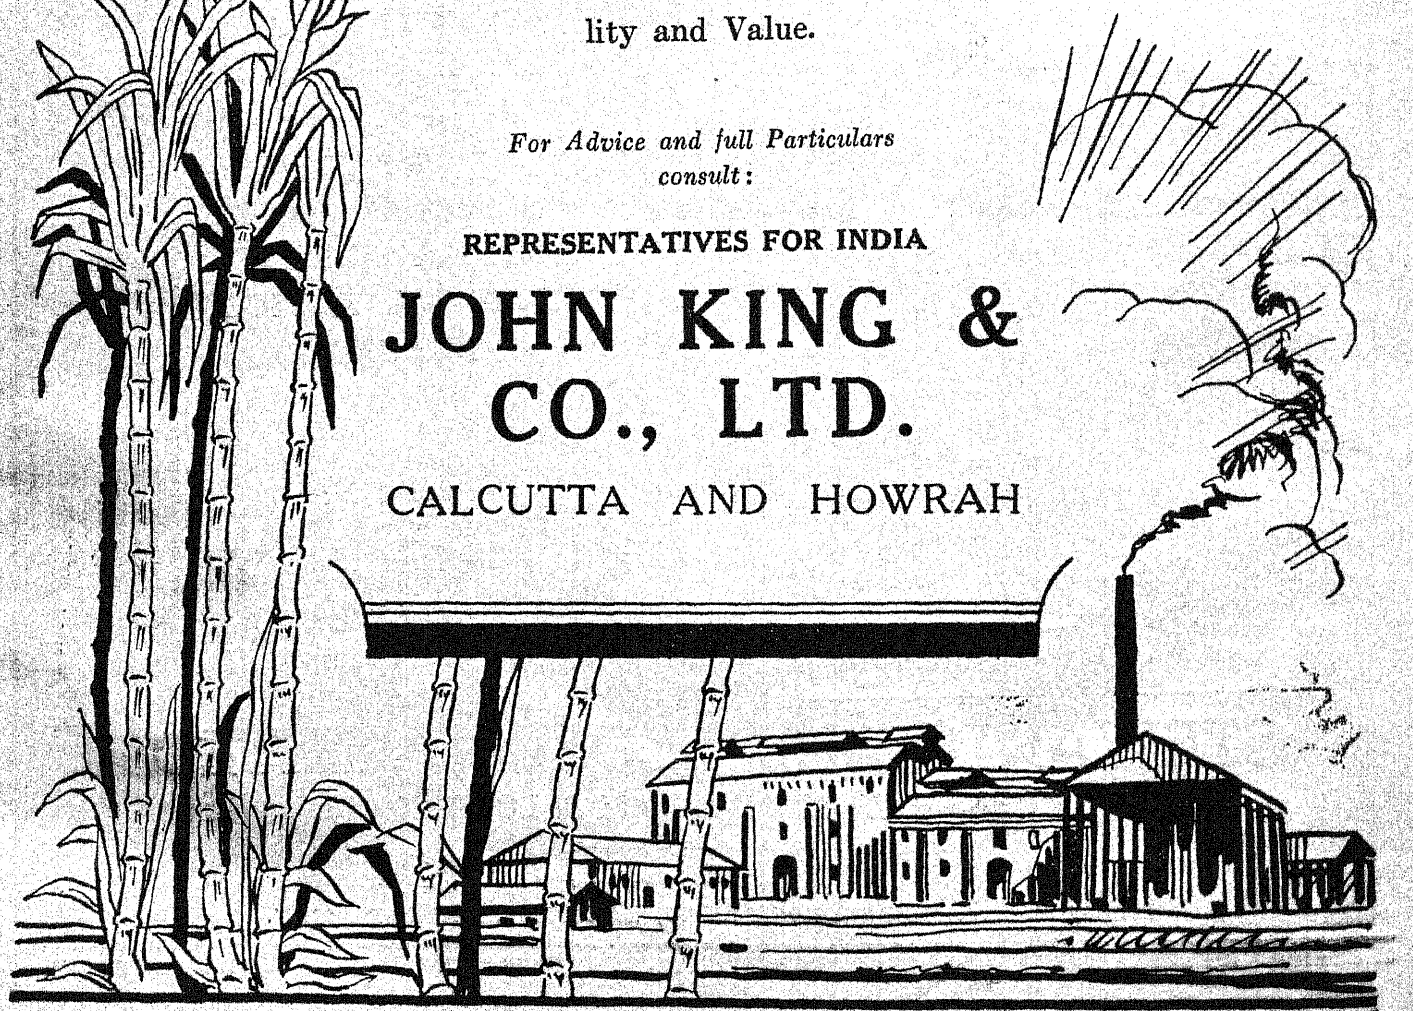
CALCUTTA AND HOWRAH



A PLEA FOR ZONING AND MINIMUM PRICE

BY

NOEL DEERR

Though sugar cane is grown all over the Peninsula the factories are mainly located in Upper India in the area bounded by the Ganges on the South, the Gogra on the West, the Kosi on the East and the Himalayan foothills on the North. These factories have been erected in areas where cane has been a staple product for generations, and they depend alomst entirely for their supplies of raw material on the arrangements they may make with a multitude of peasant small holders among whom an individual planting of five acres is exceptional.* The economic evils of this condition are plain. The miller has no control over the supplies of raw material. The small holder is in no way bound to grow cane, or when grown, to sell it to the miller. Two or more mills in the same area entering into competition will haul cane over uneconomic distances, one factory hauling cane past a second and *vice versa*. The collection of cane is frequently left to contractors or middlemen resulting in no small proportion of the legitimate profits of both grower and miller finding its way to the pockets of parasitic evils. The grower who is paid a flat rate for cane has no incentive to develop a strain of high sugar content; indeed, he has no object other than that of delivering as great a weight of material in as bad a condition as possible. From the method of operation the miller is unable to apply any system of selective harvesting. Finally, there is no protection for the investment. Large sums may be spent in developing an area to find in a few years a competing factory erected close by and with the object of pirating the fruits of the investment. Conditions such as these do not tend towards the economic foundation of a stabilized industry.

What obtains in India may now be compared with the highly organised industry in Java. As in India, most of the land is held in small holdings and the possession of land by Europeans except in small areas for purposes such as buildings is prohibited and no factory can be erected without the consent of Government. Every year Government issues orders detailing how much land as a maximum *may be* rented. There is no compulsion to rent, all that is afforded by Government is leave to rent and the bargain is made direct between miller and land owner. This system eliminates many of the evils which accompany the custom obtaining in India. The contractor disappears as does long distance haulage. There is no insane competition for supplies of raw material. The crop is under the control of the miller who can plant approved varieties of different periods of maturity, can operate a system of selective harvesting, can take off his crop at economic periods and rates, and is not forced to rush his harvest before the cane is ripe from fear that it may otherwise be pirated by his neighbour. In fact, his capital investment is protected and secured.

But the great and outstanding difference between the Java and the Indian system lies beyond these contrasts, important as they are. In India, agriculture is divorced from manufacture, and often these two phases of the production of sugar are mutually hostile. In Java, the two are associated and are operated under a common control with the object of obtaining the maximum benefit from both. The real economic foundation of the production of sugar lies in well ordered agriculture and in the absence of this a stabilized industry will not and cannot have being. Unless the raw material is produced economically efficiency in manufacture is stultified.

An ample measure of protection has been granted to the industry in India. This has resulted in the erection of numerous factories in the great traditional cane area of Upper India. The extension of planting has been great, the price received by the grower has been remunerative and there has been an immediate and opportunist profit to both grower and miller. But there has been no amelioration in agricultural conditions or tendency to a reduction in cost of a unit of sugar as in cane delivered alongside the the carrier, and this remains and will remain the dominant factor in the cost of production of sugar itself. As already indicated, there is little or no incentive to the miller to develop agricultural processes and the illiterate peasant small holder has neither the means, the opportunity nor the developed mentality to enable him to depart from his traditional inefficiency. Indeed, there are reasons to believe that the combination of protection and existing conditions may tend towards depressing the standard of agriculture. With artificially inflated prices the incentive to toil is withdrawn and it is to be feared that the Indian small holder will yield to this present temptation.*

*In Behar and in Bombay there are solitary examples of self-contained properties embracing the growing of cane and the manufacture of sugar under one control. In the United Proyinces there is an example of a wealthy zemindar owning a factory and assisting his tenants with supplies of water.

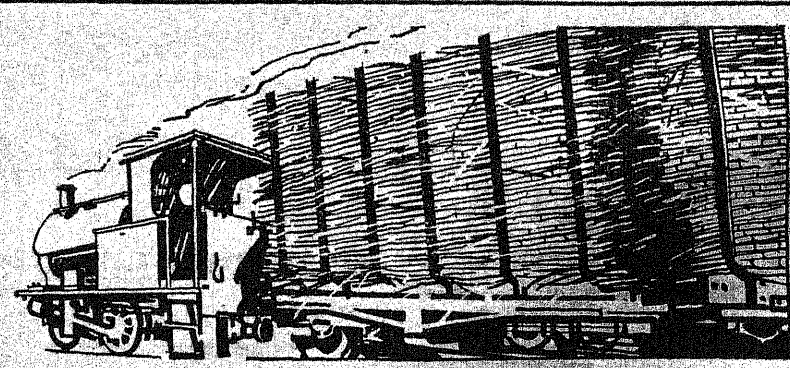
*I have actually been told by an experienced P. W. D. Engineer engaged in canal work that this is now happening. In areas a few years ago unserved by canals a crop could be obtained by honest endeavour. With access to water the same yield can be obtained with less work and so far from irrigation increasing the yield per acre, a condition of stagnation has resulted.

SUGAR CANE CARS

Built by Specialists who have years of experience in all the Sugar growing Countries of the World.

For Full details and particulars apply:—

C. COMENS & SONS.
29, DALHOUSIE SQUARE, CALCUTTA.



The writer is at one with the Tariff Board in agreeing that a case has been made out for protection with a view to the development and stabilization of the sugar industry. It is the condition under which protection will operate—the separation of agriculture and manufacture and the conflict of interests—that makes him afraid that protection, unless combined with a policy designed to protect the protection, will be vain. The problem is not one easy of solution and it appears to the writer that the only means is the adoption of a zone system similar in principle to that which has been developed in Java.†

Comparison has already been made of some of the differences between Indian and Java practice and before formulating any scheme therewith others may be recapitulated.

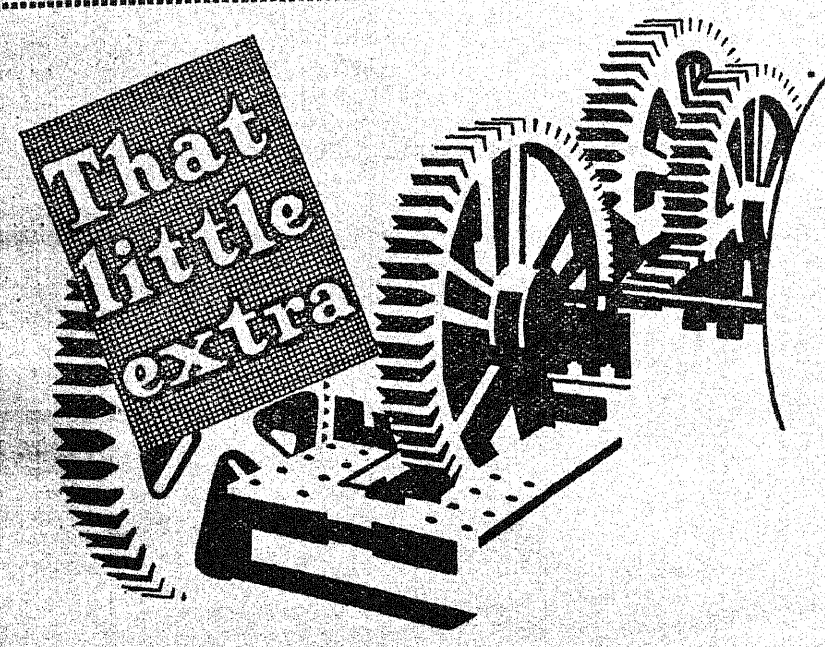
Java.—Large areas concentrated near the factory corresponding to what would be termed in Upper India "Zeerat lands." A more generous monsoon supplemented by supplies of water available for irrigation. A climate agreeable to the growth of noble canes of higher sugar content and of heavier yield than is found with the types selected for use in Upper India. Intensive cultivation combined with the application of a well considered scheme of economic manuring. Combination of interests and co-operation for the common good.

India.—Small decentralized areas often remote from the factory. A capricious and often insufficient monsoon. Waste of at least three months of bright hot sunshine before the break of the rains following an absence of other supplies of water. Insufficient cultivation and no well ordered system of artificial manuring. Lack of unity and of combination of interests.

The association of all these factors results in Java producing not less than fifty tons of cane per acre ; India under favourable conditions not producing more than fifteen. Of all these factors the writer regards as most important the insufficiency of water and he is prepared to say that without a supply of water during the fifteen weeks prior to the normal break of the monsoon and subsequently following on a delayed or failed monsoon, sugar can never be economically produced in Upper India in competition with other more favoured or more developed areas. As regards the agricultural economics of cane planting the period of hot bright sunshine from March to mid-June in combination with supplies of water may be regarded as a valuable national asset presently unutilized.

With the adoption of a zone system, that is to say, with an area given over to the miller to develop in sympathy with the small holder, there should follow at once an association of agriculture and manufacture for the common benefit of both interests. It will be the object of the miller to reduce the price of raw material and this can best be done by increasing the production per acre, and with an increment in the yield the nett income of the small holder will increase even with a decrease in the rate paid per

†Proposals for the adoption of the zone system in India are not new. They were considered and rejected by the India Sugar Committee in 1920, though two members, Mr. B. J. Padshah and Mr. Wynne Sayer, dissented from the findings of the majority. The former gentleman in his supplementary note also insisted on sound agriculture as the fundamental basis of any successful sugar industry. Later the Indian Sugar Producers' Association has expressed itself in favour of the system. In his evidence before the Tariff Board the writer again in 1930 brought the proposal forward. In this case it was to draw attention to the economic loss following on foolishly unnecessary railway hauls.



'Castrol' gives just that little extra which makes all the difference between an oil that is merely good, and one that is *better*. Try a Wakefield INDUSTRIAL Oil for your Plant and Machinery and obtain satisfaction.

WAKEFIELD
CASTROL
AND INDUSTRIAL OILS

C. C. WAKEFIELD & CO., LTD.
7, ROYAL EXCHANGE PLACE, CALCUTTTA.

unit of raw material. When this has been done the most important step forward will have been taken to make India not only independent of external supplies of sugar but eventually to enable her to become a competitor in and exporter to foreign markets. With increase in the yield per acre other considerable benefits follow in that with more concentrated areas adjacent to the factory, cost of transport and the extent of losses associated with transport will necessarily decrease. These consequences will reflect favourably on the grower as they will enable the miller to increase that proportion of his total costs which is allocated to purchase of raw material.

The great extension of the sugar industry in India has happened in an area dependent on monsoon precipitation and where no extensive irrigation schemes are in being. There is, however, in this area an ample supply of water available from tube wells and it is to this source that the writer looks. The miller capitalist in his own interest, when established in a zone and protected from interlopers, should regard the outlay necessary to establish irrigation as part of his capital expenditure or otherwise should regard part of the profits arising from the ample protection now afforded as earmarked for investment in this way. Such a scheme may be expected to be remunerative from the outset. It is not proposed that the small holder should be given water for nothing. The whole cost of the water would be recovered as an advance against cane supplied and the consequent advantages already indicated as following such a system, including, of course, the decrease in cost of production may legitimately be looked upon as a return on capital invested.

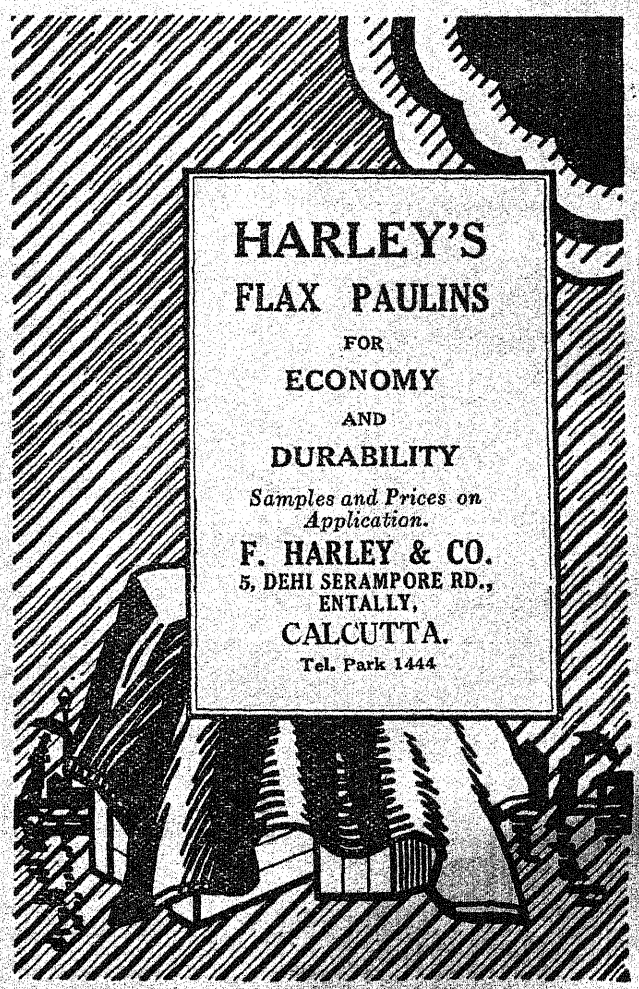
It is with reference to the need for water and how water supplies could be developed in combination with a zone system that I have mainly written. The principle could be adapted to other agricultural processes. The provision of community, mechanical cultivation, the introduction of approved varieties of cane and financial assistance for the purchase of manures could be developed on equal lines. In all these matters the village community or possibly an associated group of village communities would act as a unit dealing direct with the capitalist miller.

To the protected zone system objections, and no light ones, can be raised. The most important is that the small holder no longer would be a free agent able to sell his produce in open market, and being bound to one buyer he would be exploited for the benefit of the latter. In the scheme that I have no more than outlined, the small holder would be protected by legislation. The price paid for cane would be fixed on a scale dependent on the price realized by the sale of the sugar. The factory books would be open to audit and inspection and no objection could be raised to this procedure. If Government affords a measure of protection it has the right to demand that this protection operates to the major benefit of both parties concerned—grower and miller—and it is the first named whose interests most need oversight from Government.

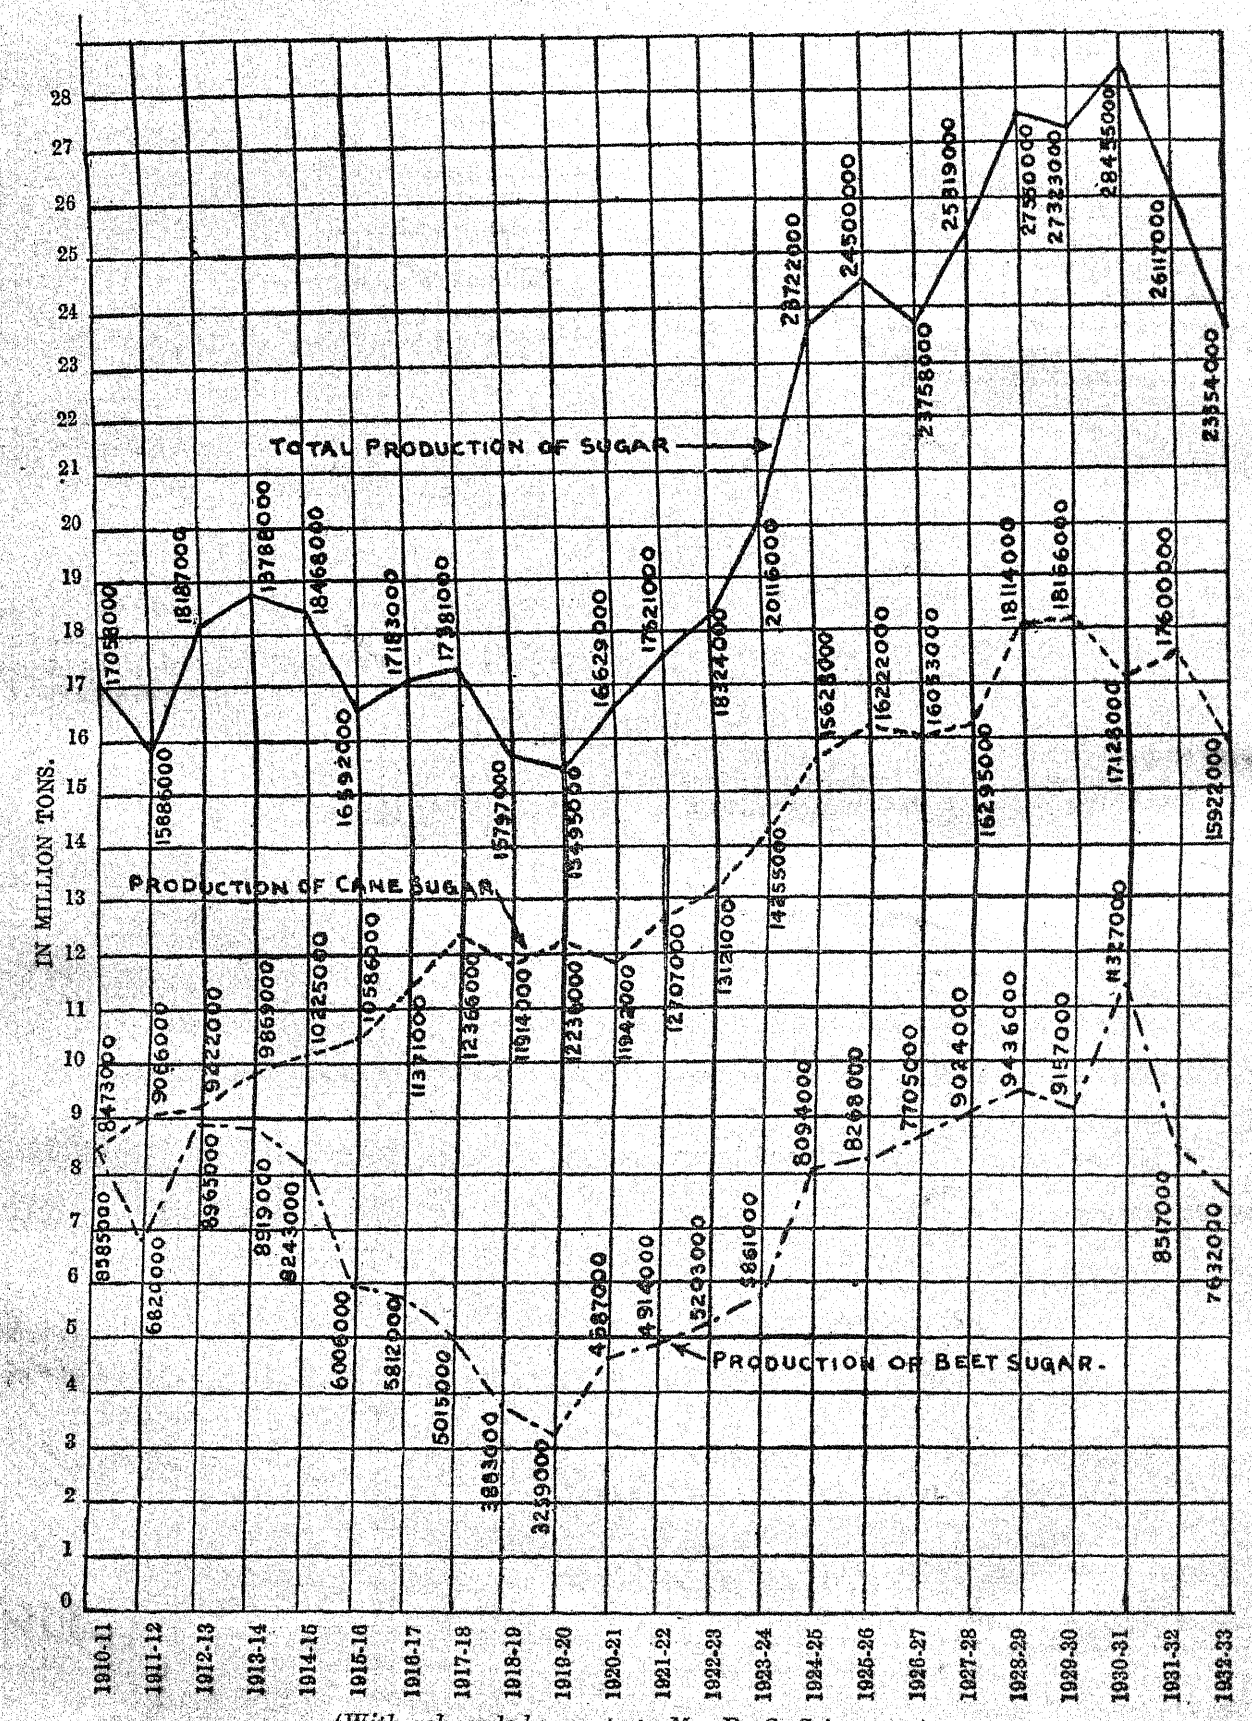
A second argument advanced against the zone system is that with the extension of factories and shortage of supplies the grower can force up the price paid for cane by playing off one factory against another. Such a system by putting a temporary fictitious and spurious value on agricultural produce would put a premium on opportunism and could not be conceived in any way as conferring a permanent and lasting benefit on agriculture.

The writer is himself a free trader by conviction though he has never reached the intolerance and absence of reasoning power shown by the mid-Victorian economists of the Cobden School. When it can be shown that there are resources available for development he is prepared to regard protection as an investment of national wealth and to welcome Government control. Agriculture and the best development of its resources under control is just as much a function of Government as is the development and control of mineral, forest and water power resources. Though possibly the great traditional sugar cane area of India is naturally less favoured than are some of the other great producing areas, conditions are far from adverse. There is a soil of reasonable fertility, there is settled on the soil a thrifty and industrious peasantry, there are available and waiting to be developed supplies of water the cost of which need be no more than where irrigation is already routine practice, the cost of manures should be no more and the response of the plant to their application should be at least equal to what obtains elsewhere.

With all this, however, the writer feels that there is one great danger that protection, as it will operate under the present system, will not reach the social order that it is the wish of Government to benefit. He is afraid that opportunism and not industrial development will result and that protection in place of stabilizing an industry may stabilize inefficiency; that it may give a temporary and immediate profit to the agriculturist but not yet be the means of affording any permanent benefit to agriculture, and to anticipate and prevent this he advises a wise and well regulated Government control over policy and principles combined with the intimate association of agriculture and manufacture and the recognition of the interdependence of the two phases involved in the production of sugar. The means to this desirable consummation lies, he believes, in the adoption of the zone system.



GRAPH A—SHOWING WORLD PRODUCTION OF SUGAR FROM 1910-11 TO 1932-33.



(With acknowledgements to Mr. R. C. Srivastava).

THE CASE AGAINST MINIMUM PRICE AND ZONING

BY H. C. PRIOR

At present the prices that were paid during the last year in North Bihar have led my Government to consider that the fixation of any minimum price, is not necessary. A fair price was generally paid for the cane and it seems likely that in North Bihar the ordinary rules of supply and demand will result in fair price being paid in the future. My Government also consider it would be absolutely impracticable to enforce by legislation the payment of any such minimum price. The first reason is, against whom is the minimum price to be enforced. A lot of cane is purchased from contractors. You can enforce the minimum price against the contractor but you cannot fix the price to be paid by the contractor to the ryot. The U. P. Government have suggested the licensing of contractors. This has not been considered by us, but since I heard the suggestion I have been trying to visualise the nature of the proceeding for the cancellation of a license, and it seems to me that it is likely to be somewhat in the nature of section 100 proceeding with a large number of witnesses appearing on either side. Again, is the minimum price to be paid to the cultivator, who sells his produce to a neighbour, for making sugar in a centrifugal or for making *gur*, or is it to be paid in the case of the *khandsari*? It will become very difficult to tell where the boundary is to be placed. Even if it could be enforced, it would be difficult to say whether it should be enforced.

The second difficulty is for what is the minimum price to be paid. Cane varies in quality. Dry cane is of little value. Cane cut and not crushed within 24 hours is of less value than fresh cane. Is the price to be fixed for the best cane or for dry cane or for long hauled cane? If it is fixed on the basis of the best cane, then the cultivator at a distance is deprived of his market. But the greatest difficulty is how is the minimum price to be enforced. There are several ways in which a manufacturer can get round any rule. If there is an excess of cane and the ryot has the alternative of selling his cane to a factory at a certain price less than the minimum or leaving it on the field having no other market, there is no doubt that that ryot will be prepared to take less than the minimum price. It will be to his interest to do so and in that case you will never get evidence against a mill which is paying less than the minimum price. It is only if there is co-operation of growers that you will be able to enforce minimum price, but if there is co-operation, then the need for minimum price itself will go.

Legislation for Zoning.

The next suggestion is legislation for zoning. It must be admitted that any such system necessitates legislation requiring the licensing of factories and giving power to refuse or cancel license. It would necessitate a careful enquiry as to the size of the zone. The U. P. Government have suggested a small committee to fix the size of the zone. I anticipate that the fixing of the zone must be a matter for the Government alone, and it is a matter of extraordinary difficulty. If the Government is going to fix the size

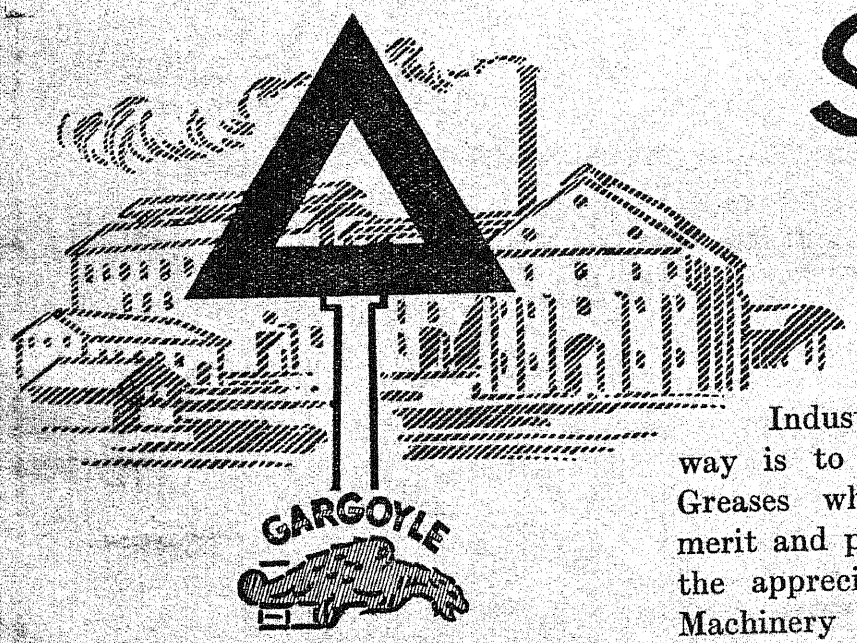
of the zone, it is then imposing on itself a very grave liability. The size of the zone may in the first instance be sufficient and just sufficient to meet the demands of one capitalist factory. But if that factory increases the supply of the cane in that zone, the ryot is at the mercy of the millowner. I am talking more of north Behar and U. P. If the ryot does not sell to the factory, he has no other market because the *gur* industry does not exist to any appreciable extent in north Bihar in the factory area. If, on the other hand, owing to economic causes and more profitable cultivation of other crops the area under cultivation in the zone diminishes, it seems that Government has undertaken a serious responsibility in limiting the area from which a factory can draw its cane thereby making it impossible to pay a fair dividend. The factory cannot get its cane supply from the zone or from outside the zone and therefore it is impossible for it to keep working for a sufficient number of days. At present the number of factories in north Bihar is not excessive and there is just sufficient cane to meet all the demands of the factories, and I do not anticipate that any capitalist manufacturer in the present state of sugar industry would attempt to establish a factory in the neighbourhood of another factory when he is not sure of his supply of cane.

Two methods of zoning have been suggested. The first is suggested by the U. P. Government in its memorandum and by this method an area is allotted to the factory and the factory is not allowed to buy cane from outside and the ryot is not allowed to sell cane to any other factory. In the U. P. the situation appears to be different as they have a well-established *gur* industry and *khandsari*. But in the factory area in north Bihar we have neither of these. If such a zoning system is established the ryot will have to sell his cane to a particular factory and if there was more cane than the factory can take, there will be competition between the ryots as to which of them is to be allowed to sell the cane. They will have to sell or leave it on the ground. At present there is a certain amount of competition between the factories and this enables the ryots to get rid of their cane. The Bihar and Orissa Government considers that the enforcement of minimum price is impossible. They, therefore, consider if a zoning system on these lines is adopted the ryot would be sacrificing the competition which he at present obtains and would be given in its place a statutory right to a minimum price which would be impossible to enforce.

As far as my Government have been able to obtain information, the factories in Bihar this year intended to pay to the cultivator on the average 5½ annas per maund of cane. It is admitted, however, that they did not succeed in doing so on all occasions. If that 5½ annas which the factories on the average intended to pay had actually been paid to the cultivators, my Government are of opinion that the distribution would have been fair. But they realise that this money was not paid and the reasons why it was not paid are partly because there was inaccurate weighing on the weighbridge and partly because a large number of factories buy their cane from contractors. The factory manager can only ensure, as long as he continues to buy cane through contractors, that the money is paid to the contractors. He cannot ensure what that contractor pays to the ryot; and my Government are afraid that in the last year the contractors did take a disproportionately large share out of the profit that accrued in the sugar industry. They therefore consider that if any legislation is to be undertaken that legislation should be directed more to ensuring that the price that the factory intends to pay is actually paid to the cultivator rather than laying down what price the factory should actually intend to pay to the cultivator and they consider that one of the best methods of ensuring this is to ensure that each factory maintains a well-paid, efficient cane superintendent who would be responsible for making arrangements with the cultivator for delivery of their sugar cane.



Safety first

In selecting Lubricants for Sugar Mills, as in any other Industry, the safe and economical way is to rely upon those Oils and Greases which, by their outstanding merit and proved performance, have won the appreciation and commendation of Machinery Manufacturers and Plant Executives alike.

RATE OF INCREASE OF PRODUCTION AND CONSUMPTION OF SUGAR IN INDIA.

(i) PRODUCTION.

Statistics relating to Production and Cousumption of Sugar in India have been given in the note on "Recent Development of the Indian Sugar Industry". Three lists of sugar factories are attached as appendices to the present note:—

Appendix A—List of old sugar factories (working from Cane or Gur or both) which were in existence during 1931-32.

Appendix B—List of new sugar factories, which commenced working during the season 1932-33.

Appendix C—Provisional list of new sugar factories projected for working during 1933-34.

No orders have yet been placed for factories for working during 1934-35.

The approximate capacities of the factories are noted in the lists. In the case of old factories (List A) the capacities stated are based on the latest available figures for the actual working results. For new factories (Lists B and C) the capacities noted are those contracted for by machinery suppliers. In practice these contract capacities are considerably exceeded in the case of plants supplied by machinery makers of repute, whilst they may fall short with plants of cheap make. It is obvious therefore that an accurate forecast cannot be prepared for production from new factories. An approximate forecast can however be prepared in the following manner:—

(*i*) **Old factories.**—The production of these generally increases every year, due to additions to plant, increase in efficiency and improvement in cane supply. On a conservative estimate, a 10 per cent. increase each year may be allowed.

(*ii*) New factories commencing work during season 1932-33. There were 27 new factories built in 1932. The aggregate capacity of these according to List B is 9,874 tons cane per day, but a round figure of 9,500 tons may be taken. Assuming 120 working days for season, 90 per cent. of the full capacity as actual capacity and a recovery of 8½ per cent. sugar on cane, the production comes to 87,210 tons sugar or say 86,000 tons. In addition most of these factories are equipped for gur refining and a production of 14,000 tons sugar from gur may be estimated, making a total of 100,000 tons.

(*iii*) New factories commencing work during season 1933-34. List C contains names and capacities of 46 new factorises which are under construction for working during the season 1933-34*. The total capacity of these is 20,000 to 25,000 tons cane per day. The estimated production of sugar (calculated as explained above) amounts to 183,600 tons to 229,500 tons sugar per year. A figure of 180,000 tons may be safely accepted and to this may be added 20,000 tons on account of production from gur, giving a total of 200,000 tons.

The estimated production for 1932-33 and 1933-34 may be summarized as follows:—

Estimate of production for 1932-33.

	Cane. (Tons.)	Gur. (Tons.)	Total. (Tons.)
Old factories (10% above last year)	174,000	77,000	251,000
New factories	86,000	14,000	100,000
Total ...	260,000	91,000	351,000

*Since this list was compiled nine or ten more factories, having an aggregate capacity of about 2,500 tons cane per day, have been ordered. Full particulars of these have been called for but have not been received so far.

Estimate of production for 1933-34.

	Cane. (Tons.)	Gur. (Tons.)	Total. (Tons.)
Old factories (10% above last year)	286,000	100,000	386,000
New factories	180,000	20,000	200,000
Total ...	466,000	120,000	586,000

The following table, taken from the Review of the Sugar Industry of India for the official year 1931-32, has been prepared on the lines explained above.

TABLE I.

Forecast of Annual Production and Consumption of Sugar in India up to 1934-35 (from Cane and Gur.)

Particulars.	Actual 1931-32. (Tons.)	Estimated 1932-33. (Tons.)	Estimated 1933-34. (Tons.)	Estimtaed 1934-35. (Tons.)
Production from existing capacity of old factories	228,000	228,000	351,000	586,000
Production due to increase in capacity of old factories (at 10% of previous season's capacity)	...	23,000	35,000	60,000
Production from new factories commencing manufacturing operations during the season	...	100,000	200,000	...
Total production of factory Sugar ...	228,000	351,000	586,000	646,000
Estimated production of Khandsari sugar ...	250,000	275,000	300,000	300,000
Total production of all kinds of sugar (excluding gur) ...	478,000	626,000	886,000	946,000
Consumption of Sugar ...	982,540	940,000	940,000	940,000
Difference between consumption and production representing margin for imported sugar	504,540	314,000	54,000	−6,000

Figures for the estimated production of sugar by the Indigenous or Khandsari system have been included in the above estimate.

For comparison, approximate estimates of consumption have also been given for each year upto 1934-35.

The above forecast shows that production of sugar of all kinds (excluding gur) should begin to be in excess of consumption during 1934-35. The following points should however be noted in regard to this forecast:—

(*i*) The Indian official year is from April to March. The cane crushing season in Java is from May to November and in India from November to April or May. Java new crop sugar therefore reaches India before the Indian cane crushing season commences. The official year in India closes before the cane grinding season is finished. The result is that there is overlapping between the official year, the Java grinding season and the Indian grinding season. This may vitiate the actual figures for production and imports in each official year. It is expected, however, that, taking into consideration the opening and closing stocks of sugar each year, the estimates given in the above forecast will prove to be substantially correct.

(*ii*) After the above table was compiled, some more factories have been ordered and several more of the existing factories are planning extensions. It is likely therefore that the production of factory sugar during the next two years may be in excess of the forecast.

Thompson BOILERS & ACCESSORIES
FAIRLIE HOUSE, FAIRLIE PLACE, CALCUTTA

(*iii*) The organised Khandsari industry may be partly replaced by modern factories in course of time.

(*iv*) The estimate of sugar refined from gur depends on the relative prices of sugar and gur, but there is no indication of gur prices rising within the period covered by the present forecast.

(ii) CONSUMPTION.

The figure for consumption for 1931-32 given in Table I is the actual figure, whilst the figures for 1932-33, 1933-34 and 1934-35 are estimates. From statistics now available the actual consumption for 1932-33 is found to be 928,607 tons, showing a drop of about 50,000 tons over the previous year.

It is difficult to give a forecast of future consumption as this depends on several factors, the most important amongst them being the future price level of sugar and the economic condition or purchasing power of the people.

As regards the first factor, namely, the price level of sugar, the following table gives the yearly average prices for Java sugar in Calcutta and the annual consumption of sugar (excluding Gur).

TABLE II.

Price level and consumption of sugar in India.

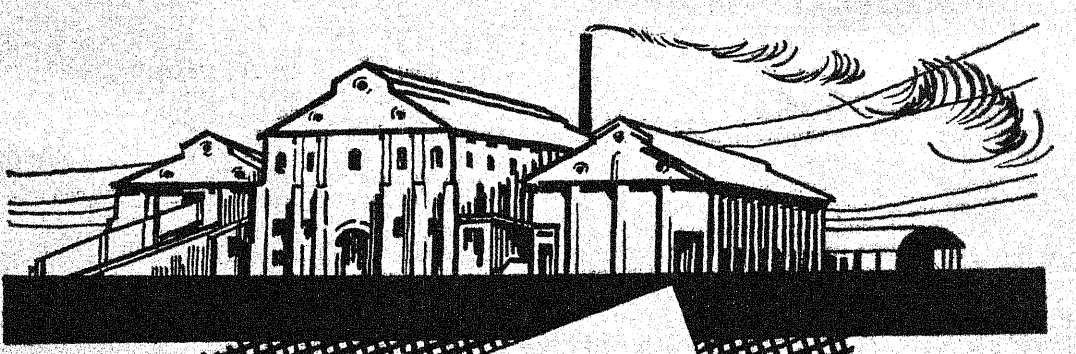
Year.	Yearly average price of Java suger in Calcutta. (Rs. per Md.)	Consumption of sugar in India. (Tons.)
	Rs A. P.	
1923-24	18 0 0	678,081
1924-25	14 4 0	859,057
1925-26	10 15 0	1,011,488
1926-27	11 14 0	999,302
1927-28	10 7 0	1,101,524
1928-29	9 13 0	1,164,805
1929-30	9 0 0	1,324,923
1930-31	8 11 0	1,215,585
1931-32	10 1 0	982,540
1932-33	10 10 0	928,095

It will be observed from the above figures that the consumption of sugar reached the highest point during 1929-30 and 1930-31, when the prices were the lowest. It may be assumed therefore, that if prices were to go down again, the consumption may increase. A drop in prices may take place in the case of imported sugar if the revenue surcharge on imports were withdrawn, or if Holland went off the gold standard. In the case of sugar made in India, which has lost its parity with Java sugar during the last year, there is every prospect of a sharp decline in prices when the four dozen new factories under construction this year commence manufacturing during the next season. The experience of the season which has just finished shows that most of the new factories were obliged to sell sugar at any price for want of warehouse accommodation and also in order to raise funds for paying instalments of the price of machinery and for completing the buildings. If, as appears likely, this is repeated next season also, the prices of sugar are certain to decline. Moreover as production comes closer to consumption, sugar will have to be transported to distant markets, the high freight charges to which, will result in a lower ex-factory price level.

Taking all these facts into consideration, the indication for the immediate future appears to be a lowering of sugar prices, and, in consequence of this an increase in consumption may be looked for.

The second factor, namely, the economic condition of the people, has, however, to be taken into account also before arriving at a definite finding. It would be outside the scope of the present note to enter into details of the various economic forces which have brought about the present change in the structure of world production, distribution and consumption of commodities in general. Sugar is a commodity with an international market and hence it would be economically incorrect to study the interaction between its supply and demand and the resultant effect on prices, for a country like India, in isolation from the rest of the world. But the high protective tariff, which at present accords a sheltered position to the Indian Sugar Industry, does, in fact, eliminate, or materially weaken, most of the outside economic forces and one may therefore consider the conditions in India by themselves, without running any great risk of inaccuracy.

As about 90 per cent. of the Indian population is rural, depending on agriculture, the whole economic life of the Country may be said to be linked to its chief staple crops, like foodstuffs, jute, cotton, and oilseeds. The purchasing power of the masses during any given period may be roughly gauged from the index numbers of wholesale



prices for these crops, particularly of food grains. If these index numbers show a falling off, the purchasing power may also be expected to decline. But whether consumption of sugar will fall off or not will also depend on the extent of variation of the index numbers for wholesale prices of commodities in general as compared with the corresponding variation in the index numbers for wholesale prices of sugar. Thus, if the former index numbers show a bigger decline than the latter numbers during the same period, it is evident that sugar has become dearer in comparison with the other commodities and consumption may therefore be expected to be curtailed. If the index numbers for foodgrains show a simultaneous reduction in purchasing power, it may be regarded as certain that the consumption of sugar will decline. Table III (based on figures published in the Indian Trade Journal, dated May 11, 1933) gives average monthly index numbers of wholesale prices in Calcutta from January 1929 to April 1933 for foodgrains (cereals and pulses), sugar and "all commodities", under which are grouped 72 articles of general use. The index numbers of prices in July, 1914, is taken as 100.

April	...	58	81	129	84

Table IV shows the variations of the index numbers for these four items as between January, 1929 and April 1933.

TABLE IV.

Variations of Index Numbers of wholesale prices in Calcutta of certain groups of articles.

Month.	Food Grains.		Sugar.	All commodities.
	Cereals.	Pulses.		
January, 1929 ...	131	171	162	145
April, 1933 ...	58	81	129	84
Total Variation	73	90	33	61
Per cent. ,,	55.7	52.6	20.4	42.1

The figures clearly show that whilst the purchasing power (as represented by the index numbers, for food-grains) has declined by 52 to 55 per cent. and whilst the level of prices of commodities in general has fallen by 42 per cent., the price of sugar shows a drop of only 20 per cent. This may be regarded as at least one explanation of the fall in consumption of sugar during the last three years.

Turning to the future, though, naturally, a definite forecast cannot be drawn up, it is possible, by continuing the above line of reasoning, to get some indication of general tendencies. The index numbers of staple crops do not show any signs of improvement so far, and the tendency continues to be downwards, though the decline is not as rapid as previously. It is obvious therefore that any marked improvement in the Economic condition cannot be looked for in the immediate future. Recovery, when it comes, is bound to be slow. So far as consumption of sugar is concerned, any increase as a result of improved economic conditions is therefore likely to be slow and small in volume. Whatever increase in consumption of sugar does take place, will be due almost entirely to a fall in sugar prices as a result of larger home production and more internal competition.

THE RATE OF DEVELOPMENT.

Having considered the rate at which production and consumption of sugar have developed during the recent years and the prospects in the near future, it is possible to determine whether the present rate af development is satisfactory, excessive or inadequate. It cannot be regarded as inadequate as India is likely to become self-supporting in the matter of supplies of sugar within four years of the imposition of the protective tariff. It cannot also be considered as excessive, provided future expansion is not allowed to outrun the consumption.

R. C. SRIVASTAVA,
Sugar Technologist,
Imperial Council of Agricultural Research, India.
Cawnpore:
The 17th June, 1933.

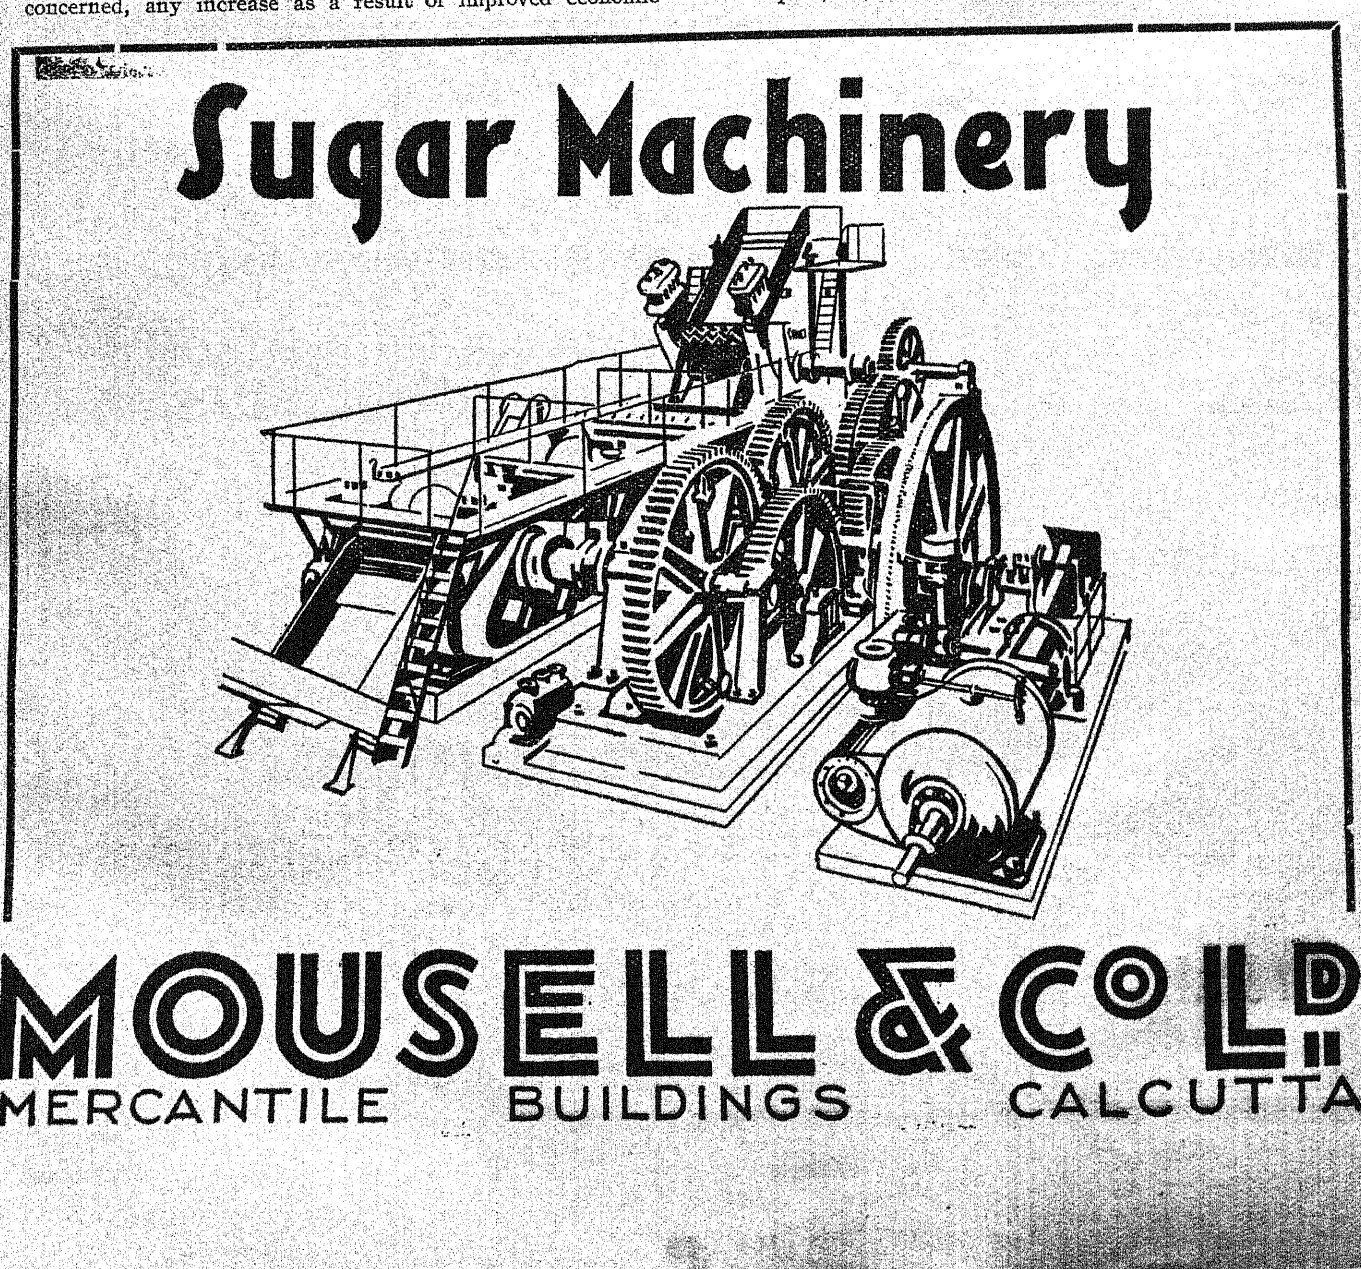
APPENDIX "A."

LIST OF MODERN SUGAR FACTORIES AND REFINERIES ACTUALLY WORKING IN INDIA.

I.—*Factories working with Cane.*

Bihar and Orissa.

1. Japaha Sugar Factory, Japaha, District Muzafferpur. (400 tons cane per day).
2. Pursa Sugar Factory, Pursa, P.O. Lauriya, District Champaran. (400 tons cane per day).
*3. Ganga Deshi Sugar Factory, Buxar, Proprietors, Messrs. B. N. Brothers and Sons, Dumraon. (100 tons cane and 11 tons gur per day).
4. Lohat Sugar Factory of the Darbhanga Sugar Co., Ltd., Lohat, District Darbhanga. (Managing Agents—Messrs. Octavius Steel and Co., P.O. Box No. 55, Calcutta).
*5. Factory of the Champaran Sugar Co., Ltd., Barah (Chakia, District Champaran. (Managing Agents—Messrs. Begg Sutherland and Co., Ltd., P. O. Box No. 21, Cawnpore). (735 tons cane per day).



*6. Factory of the Ryam Sugar Co., Ltd., Ryam, District Darbhanga. (Managing Agents—Messrs. Begg Sutherland and Co., Ltd., P. O. Box No. 21, Cawnpore). (660 tons cane per day).

*7. Marhowrah Factory of the Cawnpore Sugar Works, Ltd., Marhowrah, District Saran. (Managing Agents—Messrs. Begg Sutherland and Co., Ltd., P. O. Box No. 21, Cawnpore). (880 tons cane per day).

*8. Bihar Sugar Works, Pachrukhi, District Saran. (Managing Agents—Messrs. Bakubhai Ambalal and Co., Shahibagh, Ahmedabad). (550 tons cane per day).

*9. New Savan Sugar Factory, Siwan, District Chapra. (Managing Agents—Andrew Yule and Co., Calcutta). (500 tons cane per day).

*10. Factory of the Samastipur Central Sugar Co., Ltd., P. O. Samastipur, District Darbhanga. (Managing Agents—Messrs. Begg Sutherland and Co., Ltd., P. O. Box No. 21, Cawnpore). (660 tons cane per day).

*11. The Maharajganj Sugar Co., Ltd., Maharajganj, District Saran (Managing Agents—Messrs. Bashir and Co., Cawnpore). (150 tons cane and 18 tons gur per day).

United Provinces.

*1. United Provinces Sugar Factory, Bubnowlie, P. O. Tamkohi, District Gorakhpur. (Owned by Messrs. Mackinnon James Finlay and Maxwell). (600 tons cane and 46 tons gur per day).

2. The Aira Sugar Factory, Aira Estate, P. O. Lakhimpur, District Kheri. (Owned by the Shri Maha Lakshmi Sugar Corporation, Ltd., Lucknow). (150 tons cane per day).

*3. Gauri Factory, Gauri Bazar, District Gorakhpur. (Managing Agents—Messrs. Begg Sutherland and Co., Ltd., P. O. Box No. 21, Cawnpore). (300 tons cane per day).

*4. Padrauna Raj Krishna Sugar Works, P. O. and Railway Station Padrauna, District Gorakhpur. (880 tons cane per day).

*5. Noori Sugar Works, Bhatni, District Gorakhpur. (650 tons cane per day).

*6. Purtabpore Sugar Factory, Chapra Dubowlie, P. O. Mairwa, District Saran. (Agents—Messrs. Begg Sutherland and Co., Ltd., P. O. Box No. 21, Cawnpore). (625 tons cane per day).

*7. Rosa Sugar Factory, Rosa, District Shahjahanpur. (Messrs. Carew and Co., Managing Agents—Lyall Marshall and Co.). (400 tons cane and 29 tons gur per day).

*8. L. H. Brothers' Sugar Factory, Pilibhit, District Pilibhit.

*9. Saraya Sugar Factory, P. O. Sardarnagar, B. N. W. Railway, District Gorakhpur. (800 tons cane per day).

*10. Punjab Sugar Works, Ghughli, District Gorakhpur. (500 tons cane and 50 tons gur).

*11. The Basti Sugar Mills Co., Ltd., Basti. (Managing Agents, 61, McLeod Road, Lahore). (550 tons cane per day).

*12. Ishwari Khetan Sugar Mills, Lakshmiganj, District Gorakhpur (Messrs. Devi Dutt Suraj Mal of Padrauna, District Gorakhpur). (350 tons cane per day).

*13. Ledi Sugar Factory, P. O. Nichloul, District Gorakhpur. (85 tons cane per day).

*14. The Lucknow Sugar Works, Ltd., Aish Bagh, Lucknow. (Managing Agents—The Cawnpore Flour Mills Co., Ltd., 24, Latouche Road, Lucknow). (400 tons cane and 60 tons gur).

*15. Shrikrishna Deshi Sugar Works, Jhusi, District Allahabad. (400 tons cane and 700 maunds gur per day).

Punjab.

*1. The Punjab Sugar Corporation Ltd., Sonepat near Delhi, District Rohtak. (Managing Agents—The Amritsar Distillery Co., Ltd., Amritsar). (250 tons cane and 35 tons gur per day).

Madras.

1. Aska Sugar Factory, Aska, District Ganjam.

*2. Nellikuppam Factory, Nellikuppam, District South Arcot. (Managing Agents—Messrs. Parry and Co., Madras). (700 tons cane and 70 tons gur per day).

Bombay.

1. Belapur Co., Ltd., P. O. Harigaon, District Ahmednagar. (Managing Agents—Messrs. Brady and Co., Bombay). (350 tons cane per day).

Burma.

1. The Sahmaw Sugar Factory of the Burma Sugar Co., Ltd., P. O. Sahmaw, Upper Burma, Proprietory Concern (Messrs. Finlay Fleming and Co., Rangoon). (350 tons cane per day).

*These factories have also Refining Plants.

II.—*Factories working with Raw Sugar alone.*

Bihar and Orissa.

1. Siwan Deshi Sugar Factory, Siwan, District Saran.

United Provinces.

1. Union Indian Sugar Mills, Ltd., Nawabganj, Cawnpore. (80 tons gur per day).

2. Cawnpore Factory of the Cawnpore Sugar Works, Ltd. (Managing Agents—Messrs. Begg Sutherland and Co., Ltd., P. O. Box No. 21, Cawnpore). (52.3 tons gur per day).

3. Baijnath Balmakund Sugar Factory, Anwarganj, Cawnpore. (30 tons gur per day).

4. Unao Sugar Works, Unao, District Unao, U. P. (58 tons gur per day).

5. Tribeni Deshi Sugar Works, Naini, District Allahabad. (22 tons gur per day).

Madras.

1. Al. Vr. St. Sugar Mills, Tachanalur, District Tinnevelly.

2. Sreeram Sugar Works, Padanur, Madras Presidency. (Proprietors A. T. Theroovongadasami, Moodaliar and Sons, Coimbatore). (5.5 tons jaggery per day).

3. The Travancore Sugar Limited, Thuckalay, South Travancore.

4. Samalkota Sugar Factory, Parry and Co., Madras.

Punjab.

1. Harkishan Sugar Mills, Amritsar.

2. The Amritsar Sugar Mills and Co., Ltd., Amritsar. (40 tons gur per day.)

APPENDIX "C".

Provisional List of Sugar Factories projected for working during season 1933-34.

1.	The Vishnu Pratap Sugar Works, Khadda, District Gorakhpur. (400 tons cane per day)	Khadda, B. N. W. Railway.
2.	The Oudh Sugar Mills, Ltd., M.A. Birla Brothers, Ltd., Jahangir Wadia Building Fort, Bombay (500 tons cane per day)	Hargaon, District Sitapur.
3.	The Upper Ganges Sugar Mills, M./A. Birla Brothers, Ltd., 8, Royal Exchange Place, Calcutta (500 tons cane per day)	Seohara. E. I. Railway.
4.	The Belsund Sugar Co., Ltd., M./A. Messrs. James Finlay & Co., Ltd., I Clive Street, Calcutta. (500 tons cane per day)	Riga. B. N. W. Railway.
5.	The South Behar Sugar Mills, Ltd., M./A. Messrs. Nirmal Kumar Jain & Co., Devasaram, Arrah. (850 tons cane per day)	Bihta. E. I. Railway.
6.	Modi Sugar Mills, Ltd., M./A. Messrs. Multani Mal & Sons, Patiala. (400 tons cane per day) ...	Begamabad. N. W. Railway.
7.	Jwalapur Sugar Factory, Jwalapur, District Saharanpur. Haji Habib Kassam, Proprietor, Jwalapur, District, Saharanpur. (150 tons cane per day) ...	Jwalapur. E. I. Railway.
8.	Sriguru Arjandev Sugar Mills (M./A.—Seth Sunder Singh, Butari (N. W. Railway). District Amritsar. (Refinery 500 tons sugar per day)	Butari, near Railway station. N. W. Railway.
9.	The U. P. Co-operative Sugar Factory, Ltd., Biswan, District Sitapur. The Biswan. Hon. R. B. L. Mathura Prasad Mehrotra, Resident Director. (150 tons cane per day)	...
10.	Messrs. Kilachand Devchand, Allahabad Bank Building, Apollo Street, Bombay. (500 tons cane per day)	Baheri. R. K. Railway.
11.	The Popular Sugar Co., Ltd., 12, Mission Road,	

	Lucknow. (500 tons cane per day)	Barhni. B. N. W. Railway.
12.	The Ravalgaon Sugar Farm Ltd., P.O. Ravalgaon, *Via.* Malegaon Camp, District Nasik. M./A. Messrs. Walchand & Co., Ltd., Phoenix Building, Ballard Estate, Fort, Bombay. (150 tons cane per day)	Ravalgaon.
13.	The Balrampur Sugar Co., Ltd., M./A. Messrs. Begg Sutherland & Co., Ltd. Balrampur Cawnpore. (600 tons cane per day)	Balrampur.
14.	The Mysore Sugar Co., Ltd., Bangalore. M./Director —Dr. L. C. Coleman. (400 tons cane per day) ...	Mandya.
15.	Darbhanga Sugar Co., Ltd. (400 tons cane per day)	Pakri. B. N. W. Railway.
16.	Darbhanga Sugar Co., Ltd. (400 tons cane per day)	Purnea.
17.	Harinagar Sugar Mills, Ltd., Ramnagar, District Champaran. M./A. Narayanlal Bansilal, 207, Kalbadevi Road, Bombay. (600 tons cane per day) ...	Harinagar. B. N. W. Railway.
18.	Motipur Zemindari Co., Ltd., Motipur, Champaran. Seth Haji Abdoola Haroon, Karachi, and Seth Abdool Rahim Oosman, Calcutta (proprietors). (900 tons cane per day)	Motipur. B. N. W. Railway.
19.	Dumraon Raj Sugar Factory. (250 tons cane per day)	Bikramganj. A. S. L. Railway.
20.	Saraya Sugar Factory (Extension to 2,000 tons Capacity)	Sardarnagar. B. N. W. Railway.
21.	Sardar Ranjit Singh, (C/o Sardar Narayan Singh). (400 tons cane per day)	Simbhaoli.
22.	Ganga Sugar Corporation, Ltd., Navashahr (Hazara), *Via.* Abbottabad. (400 tons cane per day) ...	Nagina or Puraini.
23.	The Jagdish Sugar Works, M./A. Raja Bahadur Brijnarain Singh & Co., Padrauna, District Gorakhpur. (400 tons cane per day)	Kathkuiyan.
24.	Saraswati Sugar Syndicate, M./A. The Neoli Syndicate, Alfred Buildings, The Mall, Lahore. (400 tons cane per day)	Neoli, Railway Station, Manpur Nagaria R. K. R.
25.	The Saraswati Sugar Syndicate, M./A. Messrs. Jailakshmi Sugar Co., Ltd., Doiwala. (400 tons cane per day)	Jagadhri.
26.	Rohtas Sugar, Ltd., M./A. Messrs. Imam Jaidayal & Co., Dinapore (Patna), E. I. Railway. (1,000 tons cane per day)	Dehri on Sone (Shahabad).
27.	The Ratna Sugar Mills, Co., Ltd., Shahganj, Jaunpur. M./A. Messrs. Kashi Prasad & Co., Benares. (500 tons cane per day)	Shahganj (Jaunpur).
28.	Sitalpore Sugar Factory, H. K. Ghosh, Esqr. General Manager, C/o Indian Press, Ltd., Allahabad. (450 tons cane per day)	Sitalpore, District Saran. B. N. W. Railway.
29.	The Saswad Mali Sugar Factory, Ltd., (300 tons cane per day)	Akaluj on the Nira Right Bank Canal.
30.	The Deccan Sugar Factory. Proprietor—Messrs. M. L. Dhanukar & Co., Ltd. Shri Krishna Nivas Kalbadevi Road, Bombay No. 2. (150 tons cane per day)	Belavandi.

SOAP MAKING IN INDIA

The Swadeshi Movement of 1908 gave the first impetus to the manufacture of Soaps in India. And in the couple of years that followed the first boycott movement in Bengal, numerous small soap factories sprung up like mushrooms all over the province. From Bengal the rage for making soaps spread far and wide, and the small capitalists of the other provinces as well took to the manufacture of soaps as it promised to be the best profit-yielding venture which required a modest investment. Although for a time the small soap works prospered, their span of life was very limited, and with the waning of the Swadeshi Movement, the country-made toilet soaps suddenly lost all favour with the buying public. Not only so; the fitted washing soaps made in the country found no buyer as their quality was no longer liked by the consumers. The sudden collapse of the industry in 1910-11 was due to nothing else but to the very simple fact that the Indian soaps lacked the good traits, universally found in imported soaps. The reason for this deficiency was not far to seek. The small industrialists interested in soaps pinned their faith to the apparent simplicity of the chemical process for making soaps, and they turned out their wares by improvised implements and appliances. They believed that a caustic reaction of oils and fats was all that was wanted to make soaps, and for this purpose they worked with *Karais* (open iron pans), wooden frames and crude stamping presses such as were used for the industry half-a-century ago in the West. The inevitable result of such old fashioned process of manufacture was the production of unsaponified soaps, full of moisture, entirely lacking in quality and much below the chemical standard offered by Western manufacturers. No wonder then, that the demand for Indian soaps would suddenly collapse as soon as the prop of patriotism, which held up such dmeand, weakened when the partition of Bengal was settled.

About 1912 the soap companies, floated in Bengal and in other parts of India, went into liquidation, and a cake of India-made Toilet Soap or a twin cake of India-made fitted washing soap was a rarity, seldom to be found in any of the markets of the country. It was after sixteen years, *i.e.*, in 1928, that the Non-co-operation Movement once again encouraged the revival of indigenous soap industry. During the recess, soap manufacture was not absolutely dead in the country. Although the comparatively big joint-stock enterprises perished, the cult of soap-making, specially the making of washing soaps attracted energetic small capitalists, and they improved on business lines the production of Dhobie soaps, the round balls of grained soaps used by the washermen almost on an unlimited scale. The Dhobie soap had not to fight with any competition from outside, because it had no imported rival. The competition in this particular kind of soap was between the numerous Indian manufacturers, and as it became more and more keen. The bigger factories broke up, and Dhobie soap became more or less a cottage industry which spread everywhere in the country. And such internal rivalry in trade helped to establish a particular standard of quality, commensurate with the sale price of the commodity with which manufacturers from abroad could not complete. But the making of better class of soaps was still a problem, and at the time of the revival of the toilet soap industry in 1928, it set the Indian industrialists thinking once more as to the policy they should adopt to make toilet soaps in order to meet the call for Swadeshi articles. One policy was decided upon at once, and this is that up-to-date plants and machinery must be employed to produce good quality soap. The belief of the old manufacturers as to the primary importance of the chemical process for soap-making was exploded, and the new manufacturers relied as much on the necessity of mechanical equipments in a soap factory as on the knowledge for saponification of fats and oils with alkali. Therefore the new soap factories, which originated with the recent Swadeshi Movement, readily invested money to equip themselves with the minimum number of machines required for producing a cake of toilet soap.

In the early days of the second boycott movement, which has now lasted for more than five years, country-made milled toilet soaps of almost all factories were satisfactory sellers. And almost every one of the energetic industrialists who interested themselves in soap had reaped a magnificent profit on his outlay. In this short time of half-a decade, soap factories have grown up in large numbers throughout the length and breadth of India, and even at the present moment many more are being started. In Bengal it is difficult to enumerate them with precision, because the figure of to-day might be found inaccurate to-morrow. But one fact might be laid down with a certain measure of accuracy, and this is that the enthusiasm for soap industry has infected the smaller capitalists more widely to-day than twenty years ago. There are at least two dozens of soap works in Bengal manufacturing milled toilet soaps and the majority of them are equipped with modern machinery and plant for the production of classy articles. About fifty per cent of the soap works got the entire field to themselves for three or four years, and during this period dealers chased them with bags of gold to be exchanged for their products. At

MAITLAND CRAIG LTD

have considerable experience in the application of OILS and can supply Oils of which the most critical Engineers will approve.

MAITLAND CRAIG LTD.

E-2, CLIVE BUILDINGS,
CALCUTTA.

first the total output of the twelve old factories fell far short of the demand, but in about six months time the wealthier factories added to their plant and increased their output many times over until the point of saturation was reached in 1931. The prosperity of these pioneers attracted many more enthusiasts and in the beginning of 1932 quite a dozen of new factories started functioning. Then the game was reversed. The demand fell far short of the supply and the eager and obliging buyers of 1931 changed colour taking advantage of the price cutting competition, caused by over production. While the Bengal soap makers were thus fighting with each other in a rate war, the manufacturers of the other provinces quietly gained ground and established their labels not only in the Bengal markets but in the other markets of India. Such a state of things has been going on for an year and a half when all on a sudden there has appeared in the foreground the menace of ruinous competition from a very determined set of men *viz.*, Japanese Soap manufacturers. Japan first started the game of dumping soaps in India in the washing varieties and the first signs of inroads into the Toilet Soap business of India by Japan are not wanting. Because two brands of Japanese toilet soaps at four and five annas a box of 3 cakes are already widely offered for sale not only in Calcutta but in Bombay and other cities of India.

That the Indian soap manufacturers will rush up to the Central Government praying for protection against Japan is an acknowledged assumption. But it remains to be seen whether a tariff wall against the importation of Japanese soaps will ensure a continuous existence to the Indian soaps. If reasonable and honest criticism be tolerated by the Indian soap makers, it must be said that none of them are offering the quality which the consumers expect to get for the price paid for a box of Indian soap. It cannot be argued that indigenous toilet soaps are sold cheap. Such an argument is untenable even for a moment, because while the cheapest of such soaps is retailed at 5 annas a box with a total weight of approximately 4 to 5 ozs. for three cakes, there are British and German soaps hawked about in the bazars at 4½ annas a box with a total weight of 5½ to 6 oz. for the three cakes it contains. Not only so, the perfume of the cheapest Indian toilet soaps is ridiculously superficial and hardly refreshing, while its imported rival holds a pregnant store of encouraging aroma in every cake. The difference in fabric and quality between the indigenous and imported toilet soaps is palpable and cannot be argued out by patriotic sentiments. Rather than trying to pamper the Indian product by ignoring its serious defects, it will serve the soap industry better if the relative manufacturers endeavour to rectify the deficiencies of their products and bring them up to the accepted standard of French, British and American soaps. "Why does a cake of Indian soap wear out so quickly?", "Why is it not well polished?", "Why does it not smell so fresh?", "Why do the cakes look so small?", "Are they neutral?", are questions which are asked every day about Indian soaps by the users. The answer to all of them can be given only by an improvement of quality, and therein lies the future of the soap industry in India.

WORLD OF INDIAN FINANCE

Friday, July 21.

Funds have been in abundant supply, borrowers being altogether scarce. Money was hardly usable even at ½ per cent. The suspension of intermediate Treasury Bills is calculated to emphasise the sentiment of cheap credits. For some time, there has been considerable speculation as regards the possibility of the introduction of six months Bills. *Indian Finance* was responsible for starting the discussion on this topic; and from an analysis of the ways and means position, it came to the view that the Controller of the Currency would find it necessary to secure larger sums from Treasuries and that the only way of doing this was to have recourse to six months Bills. Sales of three months intermediate Bills have proved far more satisfactory than was generally anticipated. As a result of which, July-end will witness the complete wiping off of the ways and means advance from the Imperial Bank of India. In the week ended July 14, ways and means loans stood at Rs. 3 crores. Treasury Bills results announced on this week's auction day show that the Government secured Rs. 1.50 crores from tenders and Rs. 2.27 crores from intermediates or Rs. 3.77 crores in all. It is quite possible that this sum is adequate for the repayment of the entire ways and means advance. It is, therefore, on the cards that the next return of the Bank would show that the indebtedness of the Treasury to the Bank has been liquidated in full.

The materialisation of such position, in conjunction with the low Treasury Bill Maturities in August, is a factor which certainly justifies the withdrawal of intermediates. Treasuries to be repaid in August are under Rs. 4 crores, of which the commitments in the first half of the month are a bare Rs. 1 crore. From the point of view of Treasury Bills repayment, therefore, there was no need for the continuance of intermediates. But, then, a heavy payment has to be made on August 15 in respect of the redemption of the 1933-36 Bonds, for which Rs. 9 crores will be required. How is this commitment to be met? Between now and August 15, there are three tender days. This means that, on the assumption that the weekly offer will be kept at Rs. 1½ crores, the Treasury will get Rs. 4½ crores. Of this sum, Rs. 2½ crores or thereabout will be needed for the Treasury Bills Maturities up to August 15. A balance of Rs. 2 crores will, thus, be left against the Rs. 9 crores required for the repayment of 1933-36 Bonds. The leeway to be made up is, therefore, Rs. 7 crores. By increasing the weekly offer to Rs. 2 crores, an extra crore might be obtained from Treasury Bills prior to August 15. The remaining Rs. 6 crores will, most probably, be found by recourse to the Bank.

This means that though, at the moment, withdrawal of intermediates has been decided on by the full liquidation of the ways and means advances, there is every prospect of a sharp rise in this figure by mid-August. When there is this certain prospect of a fairly heavy loan from the Bank, what was the exact motive of the Government in suspending intermediates at this particular juncture? It is too far-fetched to link this step with the preliminaries associated with the issue of a new loan. We believe, for our part, that if the Government enter the market in the next few days for the final stage of the conversion programme, it would be a case of indecent and imprudent haste. We do not, in short, expect any rupee loan announcement for at least another month. The suspension of intermediates cannot, from our appreciation of the current situation, be due to any desire of the authorities to foster and accelerate easy money conditions. A possible explanation is that as October is not a favourable "revenue" month, the Government are averse to piling up Treasury Bills Maturities in that month. Large sales of three months intermediates in the current month would, therefore, result in the repayment occuring at a time when there might be occasioned some embarrasment thereby. While the authorities were averse to selling unduly large amounts of three months Bills in this month, they were not, possibly, keen on shifting on to six months Bills. The latter would have suited their ways and means position, they would have also suited the market. But it may well be that, with the present uncertainty over-hanging international finance, the monetary authorities in India would rather keep on three months Bills as the most handy instrument for credit control in an emergency.

Somewhat scrappy summaries have appeared in the daily papers as regards the Reserve Bank scheme

submitted to the Committee now in session in London. On the information now available, no detailed comment is possible. The main features are :

1. The Bank is to be a shareholders' Bank with a capital of Rs. 5 crores.

2. The capital distribution is to be on a regional basis. The shareholders' lists will be maintained separately for the different regions. The shareholders on each list will elect the directors for the region in question.

3. The Reserve regulations will not be clearly defined; for the time being, they will be elastic in accord with the requirements of a sterling exchange standard. If, at any later date, gold standard in any form is decided on, the needed changes will then be effected.

4. No special provision has so far been suggested to ensure the safeguarding of the Bank against the possibility of control being secured by any but nationals.

It will be remembered that Sir Basil Blackett was prepared to meet the Indian demand as regards (4). That was at a time when we had only the Montford Reforms. We are told that we are on the eve of further instalments of reforms; yet the point conceded by Sir Basil does not even find mention in the plan now put forward. The fact is that Sir Basil was keen on a Reserve Bank as an institution to subserve economic ends. Sir George Schuster has been told to devise a scheme for an institution to satisfy political ends. A project, which had a correct objective if not the ideal plan, was thrown out by the Assembly. The present crowd camping in London and forming a fraction of the present Assembly are the kind of people who will say ditto to *any* scheme. And why have these men been marched off to London? Is it that they are, in any way, competent to discuss proposals connected with the Reserve Bank? It is not their possession of requisite knowledge, but their owning of the needed voting strength, that accounts for their being invited to join in deliberations which should be mostly unintelligble jargon to them. We dread to think of what is in store. The Government profess to protect the Reserve Bank from political influences. And, they have not the humour to realise that, from beginning to end, the plan of the Reserve Bank in the White Paper scheme is motived by political bias and prejudice; and that they, at any rate, should not talk so sanctimoniously of the need for ridding economic questions of political cliques and intrigues.

"OUR PICTURE GALLERY"

Will appear next week.

Theme: Dr. JOHN MATTHAI.

Exchange has been somewhat quiet. There is very little business doing. Exports are very scarce. Even at 1s. 6⅛d., only few bills could be coaxed out. On the weekly tender day, applications for £2,112,000 were received and allotted on the basis of 47 per cent.

T. T. may be quoted 1s. 6 3/64d., right up to end of the year. But this rate must be said to be but barely available.

Bills may be quoted: 1s. 6⅛d., up to October; and 1s. 6 9/64d., November-December.

Money was very easy. Nominal rate for inter-bank credits was ½ per cent. Union rates for call, three days and seven days notice money was quoted ½ per cent. Onemonth, twomonths and threemonths deposits quoted 1, 1¼ and 1½ per cent respectively.

President Roosevelt's later statement reads as foll

"I would regard it as a catastrophe amounting to a tragedy if the great Conference of nations called to bring about a more real and permanent financial stability and a greater prosperity to the masses of all nations should, in advance of any serious efforts to consider these broader problems, allow itself to be diverted by the proposal of a purely financial and temporary experiment affecting the monetary exchange of a few nations only.

"Such action, such diversion, shows a singular lack of proportion and a failure to remember the larger purposes for which the Economic Conference originally was called together.

"I do not relish the thought that insistence on such action should be made an excuse for the continuance of the basic economic errors that underlie so much of the present world-wide depression.

"The world will not long be lulled by the specious fallacy of achieving a temporary, and probably an artificial, stability in foreign exchange on the part of a few large countries only. The sound internal economic system of a nation is a greater factor in its well-being than the price of its currency in changing terms of the currencies of other nations.

"It is for this reason that reduced cost of Government, adequate Government income and ability to service Government debts are all so important to ultimate stability.

"So, too, old fetishes of so-called international bankers are being replaced by efforts to plan national currencies with the objective of giving to those currencies a continuing purchasing power which does not greatly vary in terms of the commodities and need of modern civilisation.

"Let me be frank in saying that the United States seeks the kind of a dollar which a generation hence will have the same purchasing and debt-paying power as the dollar value we hope to attain in the near future.

"That objective means more to the good of other nations than a fixed ratio for a month or two in terms of the pound or franc.

"Our broad purpose is the permanent stabilisation of every nation's currency. Gold or gold and silver can well continue to be a metallic reserve behind currencies, but this is not the time to dissipate gold reserves.

"When the world works out concerted policies in the majority of nations to produce balanced Budgets and living within their means, then we can properly discuss a better distribution of the world's gold and silver supply to act as a reserve base of national currencies.

"Restoration of world trade is an important partner both in the means and in the result. Here, also, temporary exchange fixing is not the true answer. We must rather mitigate existing embargoes to make easier the exchange of products which one nation has and the other has not.

"The Conference was called to better and perhaps to cure fundamental economic ills. It must not be diverted from that effort."

FINANCE ABROAD

The week is important for the rise of the cross-rate to very near the old sterling-dollar parity. At the end of last week, the dollar closed at 4.77 after touching the level of 4.78 to which it had risen on July 14, from 4.76 on the previous day. But By Mondoy, it had risen by another 1½ points and Tuesday saw a steep rise to 4.83⅞. On Wednesday, the market opened at 4.86 and advanced to 4.86½ which is almost equal to the old parity of 4.86⅔. Even at this high level, the cross-rate showed a degree of steadiness ; but the closing was 1½ cents lower than the closing rate.

The rapid depreciation of the dollar must be dated from the time America felt a deep resentment at the attempts of the gold *bloc* in the World Economic Conference to force the issue regarding stabilisation. However much one might wish that America had shown herself more accommodative to the requirements of success at the World Economic Conference, there can be no doubt that the tactics adopted by France and the other gold standard countries after the repudiation of the stabilisation agreement by President Roosevelt is calculated to widen the breach and jeopardise the very purpose for which they were working. The gold standard countries suggested, in effect, that they would either bend the World Economic Conference to their own will or break it and incapacitate it for further work. It is natural, therefore, that not only did America refuse to be bullied by the gold standard countries but followed up the reply of President Roosevelt with a further break in the dollar. But the depreciation took time to get into stride, probably because financial circles thought they had to reckon more with the autumnal depression of sterling than with the well-advertised plans of the American Administration. It is, of course, true that, if the American authorities should not exert themselves, the normal commercial factors would tend to retard the depreciation of the dollar and create the usual seasonal slump in sterling. Though one might feel a certain degree of doubt about the intentions of the President, there can be no question that the powers newly conferred upon the President by the Inflation Amendment, especially the clause which empowers him to reduce the gold content of the dollar to 50 cents, are more than sufficient for the purpose of offsetting the seasonal influences on the foreign exchange markets and even to bring about an actual further depreciation of the dollar. In this connection, it is pertinent to recall that in 1922 and 1923, the depreciation of the French franc and the mark continued in the face of the seasonal weakness of sterling against gold currencies. If history should repeat itself, the seasonal factor would prove to be far weaker than the powers or efforts of the monetary dictatorship in America.

In Air Mail week, the weakness of sterling in relation to gold currencies did not, in any way, interfere with the further decline in the dollar. Though for a long time there was a definite impression that the sterling-franc rate was, for all practical purposes, pegged at 86, there were marked changes during the middle of the week almost comparable to the wide movements of the sterling-dollar rate. This gives rise to the question as to what are the intentions of the British Government in regard to exchanges. Our "Overseas" columns will show how in respect of the proceedings of the World Economic Conference, Mr. MacDonald and his colleagues in the British Cabinet chose to sit on the fence, aloof alike from the inflationists and from the gold standard countries. While the gold standard countries repeatedly affirm their intention of maintaining the value of their currencies at the existing parities and America emphasised that "the exchange value of the dollar is not, and cannot be, our immediate concern," the British Cabinet made no attempt to clarify their policy for the benefit of the public. In the absence of any clues from official sources, it is legitimate to regard it as a possibility that the authorities would not mind allowing sterling to follow the dollar in its downward course. Though they may not take active steps to bring about a depreciation of sterling *pari passu* with the dollar, they would not go out of the way to support it. It is with a view to preserve freedom of action within wide limits that the British Government, unlike other governments, refrained from making any statement on this question during the long-drawn out negotiations at the World Economic Conference. But the course of the latter part of the Air Mail week showed that the British authorities were unwilling to let sterling depreciate in terms of gold currencies. That gold currencies were regaining strength was itself a further bear point for the dollar. For it might encourage the flight from the dollar into gold currencies and thereby increase the general instability. Such instability might well have been avoided if the negotiations for the elimination of speculation in foreign exchanges had turned out to be successful. It was believed for a long time after Mr. Roosevelt's overthrow of the stabilisation agreement that, though the American Government might not countenance full-fledged proposals for stabilisation, they might yet be willing to allow the central banks freedom to take measures necessary for checking speculation. But it was not long before it was found that even in this matter the American authorities had little help to offer to the cause of stabilisation. Apart from the willingness of the banks to commit themselves to any such course of action, it must also be recognised that the scope for the limitation of speculation so far as the U.S.A. is concerned was severely limited. It is to the combination of the various circumstances explained in the foregoing that the precipitate fall of the dollar in the last fortnight is to be attributed.

The approach of the dollar to the sterling dollar parity induces the hope of resumption of negotiations for stabilisation of currencies and taking up the broken threads of the World Economic Conference. As the first reactions of President Roosevelt to the proposal for stabilisation were noticed, there was a substantial unanimity of opinion that the speedy depreciation of the dollar to the low levels desired would help the cause of stabilisation far better than an agreement for temporary stability such as was aimed at by the Bankers' Conference and the Financial Sub-Commission. Even in the debate in the Financial Sub-Committee for Immediate Measures on the motion of Mr. Neville Chamberlain that all the six subjects on the agenda should be kept and discussed with the necessary reservations as regards the conclusions, M. Bonnet pointed out that all that was needed was a little patience in as much as within a few months or probably a few weeks the required degree of depreciation in the dollar would have been achieved and the American authorities would be more willing to enter into an agreement. If it should prove that M. Bonnet's words on that occasion are prophetic, there is more cause to welcome the depreciation of the dollar than to regret it.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insuran and oap. ring COMPANY, LTD.

The Company issues Policies covering :—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

MOTOR CARS - - -
MOTOR CYCLES - - -
COMMERCIAL VEHICLES

NATIONAL INSURANCE BUILDING,
7, Council House Street, Calcutta.

BUY

CENTRAL BANK'S 3 YEARS CASH CERTIFICATES

FREE LIFE INSURANCE POLICIES

Every Rs. 88/8 deposited will bring you Rs. 100/- after three years which works out at the rate of 4⅛ per cent Compound Interest.

ADVANTAGES OF OUR CASH CERTIFICATES

1. If you desire to recover your amount after 6 months from the date of the deposit, it will be returned to you with interest at 2 per cent per annum.
2. If you wish to withdraw the amount at any time after 12 months, it will be returned to you with Compound Interest at 3 per cent per annum with yearly rests.
3. If you want the amount at any time after 24 months, but before the due date, it will be paid to you with Compound Interest at 4 per cent per annum with yearly rests.

This means that money invested in OUR CASH CERTIFICATES is at your disposal at any time after 6 months and is returnable with interest whenever required.

THE CENTRAL BANK OF INDIA is a purely National Institution managed entirely by Indians. It is the largest Joint Stock Bank established in India, and has the largest amount of deposits ever held by a Joint Stock Bank in India.

COMMUNIQUES AND RETURNS.

TREASURY BILLS.

The Controller of the Currency notifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, July 18. The total amount offered was Rs. 2,42,00,000. Tenders at Rs. 99-11-9 were accepted in full and those at Rs. 99-11-6 were allotted approximately 60 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Re. 1-1-6 per annum.

Tenders for Rs. 1½ crores of three months Treasury Bills will be received on Tuesday, July 25. Successful tenderers should make payment on Friday, July 28. Other conditions are as usual.

Three months intermediates sold from July 12 to 17 amounted to Rs. 2,27,25,000.

The sale of intermediate treasury bills has been discontinued.

STERLING TENDERS.

The Controller of the Currency notifies that on Wednesday, the 19th July, 1933, tenders to the amount of £2,112,000 (two million one hundred and twelve thousand) at 1s. 6 1/16d. were received and allotted approximately 47 per cent.

£1 million (one million) will be offered for tender on Wednesday, the 26th July, 1933, on the same conditions as previously announced.

THE GOLD STANDARD RESERVE.

The balance of the Gold Standard Reserve on the 30th June, 1933, amounted to £40,000,000 and was held in the following form:—

		£
1.	Cash at short notice at the Bank of England	4,811
2.	British Treasury Bills	16,628,044
3.	Other British and Dominion Government Securities	11,868,811
4.	Gold—	
	In England	2,152,334
	In India	9,346,000
	Total ...	40,000,000

CASH BALANCE OF THE GOVERNMENT OF INDIA.

(In thousands of Rupees).

	28th Feb., 1933.	31st Mar., 1933.	30th Apl., 1933.	31st May, 1933.

WHY YOU SHOULD SHOP AT CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE.

(From Our Correspondent).

Calcutta, July 20.

Jute.—This section was steady on Thursday with Howrahs opening at Rs. 51-11, touching Rs. 51-12 and closing at Rs. 52-6. Kamarhattys were better at Rs. 503, National improved to Rs. 23-8, Clives were better at Rs. 28-4, Albions quoted Rs. 265, Anglo-Indias Rs. 370 while Presidencies improved to Rs. 5-14. Adamjee quoted Rs. 9-12, Alliance Rs. 312, Bally Rs. 165, Belvedere Rs. 377, Champdany Rs. 143, Fort Gloster Rs. 535, Gourepore Rs. 364, Kanknarrahs Rs. 473, Kinnison Rs. 671-3, Orient Rs. 220, Northbrook Rs. 51-4, and Aucklands Rs. 197. The general tone in sympathy with a better jute goods market remained steady and towards the close the market showed a tendency to improve.

Government Securities.—The firmness which was noticeable in this section last week continued during this week also but Thursday saw a decline in values. 3½ per cent. Paper improved to Rs. 86-4, fell back to Rs. 85-2 but closed at Rs. 85-8 ; 4 per cent 1960-70 loan fell from Rs. 98-8 to Rs. 98, 5 per cent. 1945-55 came to business at Rs. 113, 5 per cent. 1935 bonds quoted Rs. 104-14, while the new 3½ per cent. Loan (1947-50) eased from Rs. 95-5 to Rs. 94-15.

Coal.—There was a fair amount of enquiry in this section on Tuesday, Amalgamateds improving to Rs. 13, Bengals were unchanged at Rs. 208, Katras Jherria moved up to Rs. 27-14, Burrakurs came to business at Rs. 10-4, New Beerbhoom were slightly better at Rs. 9, Standards improved to Rs. 24-12, Pench Valley quoted Rs. 31-8, Equitables Rs. 16-14, Seebpore Rs. 15-12, New Tetturya Rs.1-10, North Damuda Rs. 3-4, and Churulia Rs. 1-12.

Banks & Railways.—Imperial Banks fully paid quoted Rs. 1200-8 and the Contributories Rs. 300, Central Banks Rs. 22-6, Bank of India Rs. 100 and Allahabad Rs. 327 and 160 respectively. In Railways, Arrah-Sasaram quoted Rs. 52, Burdwan-Cutwa Rs. 75, Kalighat-Falta Rs. 75, Sara Sirajgunge Rs. 82 and Darjeeling Himalayan Rs. 91, Pref.

Teas.—This section showed some improvement on Wednesday when the bulk of the business was done. Prices were on the upward grade on Tuesday and on Thursday in spite of profit-taking there was a good all-round enquiry and a long list of transactions completed. Bishnauth were dealt up to Rs. 22-12, East Indias moved up to Rs. 15, Hantaparas Rs. 402-8, Jutlibaris Rs. 16-12, Teloijan Rs. 13, Dessai and Parbutti rose up to Rs. 350, North Western Cachar were marked up to Rs. 270, there was good enquiry for Hattikhiras at Rs. 20-12, Sonai River up to Rs. 17-12 while Loobahs did business up to Rs. 7.

Miscellaneous.—This section was more or less featureless, covering operations being responsible for maintaining the price of Indian Standard Wagon round Rs. 44. Indian Iron and Steel were better at Rs. 4-10, Bengal Iron showed little change at Rs. 2-10. In Sugar shares, Carew & Co., changed hands at Rs. 15, Balarampurs had enquiries at Rs. 11-8, Cawnpores Rs. 35-4, British India Corporation As. 14, Bengal Paper had good enquiry at Rs. 71-8. Titaghur Paper (defd) were dealt in at Rs.5-11, Britannia Biscuits quoted Rs. 2-6, B. I. Corpn. As. 14, Triton Insurance Rs. 169-4, Indian Wood Products Rs. 33, Calcutta Steam Navigation Rs. 104, Midnapore Zemindary Rs. 66-4, Bengal Assam Steamship Rs. 178, Port Shipping Rs. 12-12, British Ceylon Corporation Rs. 6-12,.

BOMBAY STOCK EXCHANGE

(*By Wire.*)

(From Our Correspondent).

Bombay, July 20.

Giltedged securities ruled very firm following London advices. The glut in the money market proved too powerful an incentive for buyers of Government papers. Three and a half per cent. quoted Rs. 82-12 last Thursday. A rapid advance took place and yesterday morning touched the highest of Rs. 86/2. Since then profit-taking occurred and at 3 p.m. it stood at Rs. 84-9.

In Industrials, Burmas came up from Rs. 397-8 to Rs. 414-6. Demand was witnessed for cement shares. India Cement coming up from Rs. 273-12 to Rs. 292-8. Bundis improved to Rs. 26-2 and Shivrajpur to Rs. 19-8. There is remarkable rise in Andhra Valley and Tata Power Ordinaries, former coming up from Rs. 1,412-8 to Rs. 1,462-8 and closing at Rs. 1,451-4 and the latter improving from Rs. 990 to Rs. 1,045 and then closing at Rs. 1,027-8. Tata Hydros ordinary, however, remained quiet at Rs. 159-6. Marked weakness was felt only in Tata Steels, the fluctuations being as given below. Similarly Imperial Bank old scrips declined from Rs. 1,028-12 ex. div. to Rs. 1,187-8. Belapur Sugar advanced by Rs. 10 to Rs. 192-8. Mill shares were comparatively steady and fluctuated as given below for important scrips. New Great Easterns came up Rs. 190. Alcocks advanced to Rs. 206-14 and was finally quoted Rs. 203-12.

JUTE AND JUTE GOODS

JUTE.

During the week under review, the jute market in Calcutta has ruled quiet but steady without heavy fluctuations. The highest and lowest quotations for October futures were Rs. 34-8 and Rs. 33 respectively.

After good business done both in local and overseas markets during the previous two weeks, there was a sort of lull in the market. Small business was done in ready firsts at Rs. 30 and August at Rs. 31-8. There was not much of a selling pressure visible in the market. Business was done by the mills as well at Rs. 5-4 and Rs. 5-8 but the quantity of business done was not large.

The steadier tone prevalent in the raw jute market was partly due to the steady tone of hessians and outside markets and partly due to the reserve of sellers pending arrivals of new crop. Sellers are not willing to discount prices and make forward sales unless they are sure of buying it back in the mofussil markets; at the same time buyers are not desirous of paying higher prices considering the fact that unless and until buying limits are able to offer appreciable quantities, even if they raised their buying limits they would not be able to get the quantities they require. At the amoment it appears that the market will rule within narrow limits for some time.

JUTE MANUFACTURES.

Ruling slightly easy during the earlier part of the week, the hessian market ruled steadier as the week advanced, the tone towards the close was again easy. The weakness that developed on the news of decrease of consumption of hessians in U. S. A. during the month of June, as compared with the previous month by two lakhs yards, did not remain long. Buyers for eleven porters again appeared on the scene. The purchases being largely for July shipment the nearer positions were favourably affected. It is reported that the purchases were made on account of an option dealer and not for exporters. If it comes out true there is every possibility that the markets may rule easier in the near future.

A drop of 40 points in cotton in U.S.A., and the heavy profit-taking sales of grains in American markets had a depressing effect with the result that the local markets were also easier. The heavy liquidation in U. S. A. was due to the banks restricting their credits to speculative purchases and raising their margin also. At moment the market opinion has been that the rise has been a little overdone and a good reaction is due before any further rise takes place. The present prices are, therefore, not likely to be maintained. The intrinsic position of hessians is quite sound and the market is so sensitive that even the slightest bull point raises the values considerably.

The statistical position of jute and jute goods is made fully clear from the tables given below. The stocks of hessians at the end of June have come down to 7.25 crore yards from 9 crore yards in January, 1933, 14 crore yards in January, 1932, and 24 crore yards in January, 1931. Whereas the stocks of heavy goods have risen from 3.33 crore yards in January, 1933, to 17 crore yards in July, 1933. The stocks during January, 1932, were 5.36 crore yards.

The exports of hessians to U. S. A. have improved to 32.5 croe yards during the six months January to June, 1933, from 27.88 crore yards during the same period last year. The total exports during these sixmonths have amounted to 50.73 crore yards against 44.26 crore yards in 1932 and 45.72 crore yards in 1931.

The consumption in America, however, has remained low, amounting to 240 million yards during January to June in 1933 as against 248 million yards during the same period in 1932 and 334 million yards in 1931. The stocks in America, on the contrary, are increasing amounting to 248 million yards against 235 million yards in May 1933 and 231 million yards in January, 1933. Thus it can be safely inferred that the rise in the price of hessians depends absolutely upon America being able to maintain her price level. In case the consumption in America does not show any improvement, the production of hessian in Calcutta combined with that of Dundee may act as bear factors in the market. The tendency of the market at the moment is very uncertain.

COTTON AND COTTON GOODS

COTTON.

(By Wire.)

(From our correspondent).

After ruling fully steady during the earlier part of the week, the market has ruled quiet towards the close. The strength was attributable to the acreage reduction plan which forced New York values to a little over 12 cents. According to the announcement made by Mr. Wallace about 10 acres of land have been leased out, thus reducing the crop by 3.5 millions bales. As anticipated, long liquidation followed the success of the reduction plan and under pressure to sell the market is easier with a decline in values towards the close. At the same time, favourable weather reports together with the liquidation in grain and stocks reacted on cotton, forcing the holders to liquidate.

Broach April-May which was ruling about Rs. 236 is down by about four points with a further small decline anticipated in the near future. As a matter of fact the rise in American cotton has been too sharp and steep and a reaction was due. It seems desirable to watch and wait the further development of the market during the next week.

PIECEGOODS.

Due to steady conditions in the cotton market and an improved offtake the market ruled steady earlier in the week. Towards the close the tone is slightly easier.

There has been more enquiry in the market but the total business resulting is comparatively small. The undertone is healthy but the actual movement of goods being far below anticipations no new business of importance is reported done. Stock with bazar dealers and Indian mills are considerably large and therefore a moderate enquiry did not give any spurt to values.

Similar conditions have prevailed in the yarn market; the tone is steady, values are more or less unchanged. Stocks are heavy and demand from consuming centres poor. Very little is done by way of fresh business in Indian, Japanese or English yarn.

The total number of packages imported into Calcutta from all producing countries, including those from Indian ports, during June, are returned at 34,160 packages, *viz.*, 10,938 packages from Indian ports and 23,222 packages from outside ports. This compares with 32,058 packages for the same period last year; 34,721 packages for May; 29,996 packages for April and 37,592 packages for March. The following comparative figures giving the respective imports from the three main sources of supply during the past six months reveal a marked decline in trade in respect of British goods, whereas Japanese importations show continued progress:—

	From Gt. Britain.	From Japan.	From Indian Ports.
	Pkgs.	Pkgs.	Pgs.
January ...	6,340	11,687	22,399
February ...	5,269	9,740	19,999

London (Air Mail Week).

The activity in the market continues unabated. Earlier in the week, with offerings in the market rather moderate and with the demand from the continent still keen, a substantial premium over the franc parity was maintained. But on the 5th inst., the premium was reduced a little as a result of larger amounts of gold being available. The average of the quotations during the week was 122 sh. 10.42d.

The following were the United Kingdom imports and exports of gold registered from mid-day on the 26th ultimo to mid-day on the 3rd instant:—

SILVER.

(By Wire)

(From our correspondent).

Bombay, July 20.

Hopes of re-habilitation of silver had already disappeared before the deadlock appeared at the World Economic Conference. However bull operations have been buoyed up with some hopes over agreement proposed by Pittman. It now appears that these hopes also are not likely to be realised. Hence silver prices which remained quiet for some days gave way from yesterday. Rate for Shravan has come down from Rs. 57-7 to Rs. 56-6 at 6 p.m. to-day.

London (Air Mail Week).

The uncertainty that hangs over the deliberations of the Economic Conference has influenced the market to a great extent with the result that it has behaved in a very erratic manner. The opening quotation for the week showed a decline of 9/16d. for both cash and two months delivery, 18⅝d. and 18¼d. respectively ruling or the 29th ultimo, the fall being due to offerings by America on a poorly supported market. At this level, however, Indian Bazars and Speculators began to take interest, and the market recovered sharply, assisted yesterday by some buying on China account.

Supplies are still forthcoming from the continent, and although speculators seem inclined to re-sell at advancing prices, there appears to be resistance from the same quarter on signs of any decline.

TEA AND COFFEE

TEA.

Calcutta Sale No. 6 was held on 17th and 18th July 1933 when 16,500 packages for export and 6,000 packages of leaf and dust for internal consumption were sold at annas 10, 5-5 and 4-11 per lb. respectively.

Dooars quality, though still satisfactory, showed a further falling off, but Assam and Darjeeling contributed more second flush teas. Some of the Assam invoices were very good and quality from this district has been better this season than for many years.

Good demand prevailed for all grades and the sale passed with a brisk tone.

Leaf teas, in which Indian buyers showed much increased interest, advanced ¼ anna while tippy Orange Pekoes were 6 to 9 Pies dearer.

A kelcome feature of the sale was the better demand for medium and good teas which were dearer all round, Broken Orange Pekoes and Fannings receiving particular support sold at 2 to 3 annas over rates.

Common and low medium broken were steady and low Fannings advanced ¼ to ½ anna.

Dusts sold well at fully firm to dearer rates. Leaf tea for internal consumption being in very good demand.

London.—At the London market Ceylon Teas were in great demand. There was keen competition for all teas up to 11½d. per lb. Prices for these qualities advanced from ½d. to 1d. per lb. For higher priced teas the demand was not so good but the prices were steady.

For Indian Teas too there was generally a good demand. Common qualities improved by a farthing per lb. and medium sort by ½d.

At the London auctions on July 17th, 53,300 packages of Indian tea were submitted for sale.

	Last auction July 17th per lb.	per lb.
Common Pekoe	8¾d.	8¾d.
Common Broken Pekoe ...	8¾d.	8¾d.
Common Orange Pekoe ...	8¾d.	8¾d.
Common B. O. Pekoe ...	9d.	9d.
Common B. P. Souchong ...	8¾d.	9¼d.

The following were the value prices:—

Clean Common Pekoe ...	8⅞d.	9¼d.
Clean Common B. Pekoe ...	9d.	9⅜d.
Clean Common O. Pekoe ...	9d.	9⅜d.
Clean Common B. O. Pekoe	9⅛d.	9⅜d.
Clean C. B. P. Souchong ...	9d.	9¼d.

TEA AVERAGE PRICES

The following were the average prices of tea in the London market during the week ended July 14th,.

Indian Tea (Northern) last week 9.51d., this week 9.91d. lb.; Indian Tea (Southern) last week 9.98d., this week 9.77d. lb.; Ceylon Tea last week 8.24d., this week 7.87d. lb.; Sumatra Tea last week 7.55d., this week 7.48d. lb.

LONDON TEA SALES

At the London auctions on July 18th 27,200 packages of Ceylon tea were submitted for sale.

The following were the lowest prices fetched during the day's auction:—

	Last auction July 18th per lb.	per lb.
Common Pekoe	8¾d.	9¼d.
Common Broken Pekoe ...	8¾d.	9¼d.
Common Orange Pekoe ...	9d.	9¼d.

COFFEE.

The following are extracts from a note on the coffee industry in India in 1931-32 by Dr. D. B. Meek, Director-General of Commercial Intelligence and Statistics. The industry is confined to Southern India comprising the Madras Presidency, Coorg, and the States of Mysore, Travancore and Cochin. The number of reporting plantations in the year under review was 8,191, covering a total area of 307,219 acres, as against 3,401 plantations with an area of 284,041 acres reported in 1930-31. It should be borne in mind that in this year the returns of plantations having an area between 5 to 10 acres were also included and therefore figures for the current year are not strictly comparable with those of the previous years. The area actually under coffee in the year under review was 173,224 acres as compared with 160,261 acres reported for plantations having an area of 10 acres and over in the preceding years.

The total reported production of cured coffee during the year was 33,734,486 lbs. as compared with 32,972,967 lbs. in the preceeding year. The yield per acre of plucked area being 258 lbs. (253 lbs.) in Coorg, 217 lbs. (230 lbs.) in Mysore, 198 lbs. (195 lbs.) in Madras, 109 lbs. (177 lbs.) in Cochin, and 29 lbs. (587 lbs.) in Travancore. The figures in brackets relate to 1930-31.

The daily average number of persons employed in the plantations during 1931-32 was returned at 103,766 as compared with 85,716 persons in 1930-31.

Imports of coffee showed a marked decline in 1931-32 and amounted to 4,793 cwts. as against 42,591 cwts. in 1930-31. The fall is accounted for, by reduced imports from Java, Ceylon and Straits Settlements, the principal suppliers of coffee to India. The reexports fell from 3,623 cwts. in 1930-31 to 1,899 cwts. in 1931-32. The total exports of coffee increased from 150,000 cwts. in 1926-27 to 277,000 cwts. in 1927-28. In 1928-29 and 1929-30 exports declined. In 1930-31 shipments again rose and amounted to 293,000 cwts. Again in 1931-32 there was a decline in exports to 156,000 cwts.

The principal destinations of Indian coffee are United Kingdom and France and both of them took less in 1931-32. Only Norway slightly increased her imports of Indian coffee.

The exports during the coffee season (*i.e.*, from July to June) were 162,023 cwts. in 1931-32 as compared with 208,387 cwts. in 1930-31.

SUGAR

The sugar market in Calcutta during the week under review, has ruled quiet but steady with a small amount of business passing. The values underwent a decline without much change. Stocks at the main Indian Ports are estimated as below:

	1933		1932
Calcutta (12th July) ...	48,270	(13th July)	34,380
Bombay (13th July) ...	61,000	(13th July)	101,000
Karachi (14th July) ...	52,000	(15th July)	37,500
Madras (10th July) ...	23,000	(11th July)	20,000
Rangoon (10th July) ...	10,240	(11th July)	10,036

Bombay—The market in Bombay has ruled dull and easier with a decline in value. It was partly due to restricted business and partly due to arrival of SS. *Sumatra* and the anticipated arrival of two more steamers bringing about 4,000 tons of sugar each.

Foreign.—The market, though it had already seen a small decline in values, showed further decline during the week. The New York market has lost a few points while Java and London were reported a penny lower. London terminal also declined due to further rise in Cross-rate. N. I. V. A. S. limits for 1932 crop for Europe is reported to be 4.90 Fl. for superior sugar and 4.25 Fl. for browns.

The following are the quotations for sugar.

Calcutta	Java sugar	Cawnpore

SIR OSBORNE SMITH: Astonishing production.

Sir R. N. MOOKERJEE: Remarkable achievement.

MR. G. D. BIRLA: Undoubtedly a compilation of very useful information.

SIR BASIL BLACKETT. There is hardly any financial or economic information regarding India which does not find some place in the volume.

J. SCHUMPTER: All the more, economists all over the world must be grateful to you.

Price Rs. 5 only.

To subscribers of "INDIAN FINANCE" Rs. 3 only.

Rs. 4 for extra copies to subscribers.

The Managing Editor,
"INDIAN FINANCE," 20, British Indian Street, CALCUTTA.

Sir,

I send herewith Rs..... for of "Indian Finance Year-Book" on the basis of concession allowed to subscribers.

Name.....

Address.....

Peas.—White Peas Rs. 4-8 per md. Green Peas at Rs. 3-8 per md. Rahar Peas at Rs. 5 per md.

Rice.—Patna Rs. 3-12 per md. loose ex-godown Banktulshi at Rs. 4-0 per md. loose ex-godown Kalam Kathi at Rs. 4-0 per md. loose ex-godown Kazla or Cooly Rice at Rs. 2-10 per md. loose ex-godown. Balam at Rs. 3 per br. md. loose ex-godown.

COAL.

There has been no change in the condition of the market since last week and there is a quiet tone all-round.

The prices are nominally as follows:—

	Rs. A.	Rs. A.
	Per ton.	
Victoria, Desherghur and Poniati ...	3 12	...
Super Selected Jherrias	3 12	...
Other Raniganj	2 0	to 2 8
Selected Jherrias	3 8	...
Other Jherrias	2 4	to 3 0

SHELLAC.

During the week, the market has ruled easier without much business passing. There has been good business done in the London market, but the same has not raised the local values due to the requirements being from holders who brought at lower prices. The market at the time of writing is easy with a steady undertone.

The following are the latest quotations:—

	Rs.	A.	P.
T. N.	25	0	0
S. T. I.	25	8	0
I. T. N.	24	0	0
12%	24	8	0
Super fine	27	0	0
Seed lac	8	8	0
Kiri	3	8	0
Stick lac	3	8	0
September futures	27	12	0

Shipments up to July 17th amounted to 13,418 chests.

Daily quotations for T. N. Shellac for the week ending Thursday the 20th instant 1933 are as follows:—

	July Dely.	September Dely.	
Friday the 14th July, 1933 ...	26 8	28 8	quiet.
Saturday the 15th July, 1933 ...	25 14	27 14	
Monday the 17th July, 1933 ...	25 10	27 10	
Tuesday the 18th July, 1933 ...	25 4	27 4	
Wednesday the 19th July, 1933	26 0	28 0	
Thursday the 20th July, 1933 ...	25 2	27 6	quiet.

Rates for weekly margin payment announced on Saturday the 15th instant are 26/- July, 28/- September.

HIDES, SKINS AND LEATHER.

(From our special correspondent.)

Bangalore, July 18.

The local Hide market is selling 16 lb—18 lb wet salted cow hides mixed lots at 2 annas 3 pies per lb, the price having come down one anna per lb from 3 annas 3 pies per lb (wet). For Hides above 18 lbs, ½ pice per lb for each rise is deducted; if they are lighter ½ pice per pound decrease in weight is added—roughly 18 lb hides are being sold at about Rs. 2-8-0 per hide.

EAST & WEST INSURANCE CO., LTD.

ESTD. 1913.

Head Office:—East & West Buildings, Apollo Street, Fort, Bombay.

The last VALUATION REPORT reveals certain striking features.
Surplus disclosed is nearly 5½ times more than that disclosed at the previous valuation.

1933 again a VALUATION AND A BONUS YEAR.

Forecast - - Grater Prosperity

It will pay you to take out a policy today.
Agency terms are liberal—Treatment sympathetic.

For particulers apply to:—

The General Secretary,
E. I. D. Branch,
3 & 4, HARE STREET,
CALCUTTA.

The Manager,
Head Office.

(By our correspondent.)

Calcutta, July 21.

The local hide market has shown a decided weakness during the last 2 days. Clearances have been on an average scale, but stocks are not plentiful. Best quality—Durbhangas wet salted cows—have been sold 1 pice lower than last quotation *i.e.* 3 annas 9 pies per lb wet. Ordinary wet salted qualities average weight 15 lbs best selections are quoted at Rs. 60/- per score. Ordinaries are being sold at Rs. 40/- per score, average weight 10/11 lb. (wet). There is no change in the quotations for other classes of hides which are practically being sold at last week's prices.

Leather.—The market continues extremely dull for all classes of leathers, and sales have been few and far between.

12, MISSION ROW, CALCUTTA.

(*Continued from Page 177*)

Lord Salisbury. Our perenial optimists, Sir Tej Bahadur Sapru and Mr. A. Rangaswami Ayangar, who are hopeful enough to get blood out of stone, referred, at this stage, to Lord Irwin's declaration, saying that the whole subsequent trouble was due to Sir Malcom Hailey's interpretation of it as responsible government in the Empire. Now was Lord Irwin's turn to intervene in the discussion. "Did I say", asked the Ex-Viceroy, in effect, "that Sir Malcome's interpretation was wrong? I rather think I should be wrong if I said that he was wrong. My much-discussed declaration dealt entirely with the realism of ultimate purpose. It made no commitments whatever with regard to the date." If Lord Irwin, so universally trusted in India, did make a pledge, he would rather like us know now that it was a pledge of mickle mite.

* * *

To return to the discussion in the Parliamentary Committee. Sir TejBahadur Sapru pleaded that he had never suggested that anyone was committed to a date. But he had the temerity to add: "If at this stage we are told that the declaration only means 'responsible,' I have nothing more to do with this constitution." The following is the press report of the discussion that followed:

> Lord Rankeillour. "They were the Viceroy's words. They can be overruled by Parliament."
>
> Sir Tej Bahadur Sapru: "We attach much more importance to the Sovereign's representatives and refuse to be drawn into hair-splitting distincetions between the Viceroy and Parliament. We take our stand on the King's declaration."
>
> Lord Salisbury: "Let there be no mistake. We do not admit a pledge, except as a conditional pledge."

Lord Salisbury says that it was only a conditional pledge; and he does not want any mistake about it. We may tell Lord Salisbury that there can be no such thing as a conditional pledge; and let there be no mistake about it. If "oaths are straws, men's faiths are wafer cakes," all this make-believe of consultation and conference is futile and meaningless. In a heroic vein, Sir Tej Bahadur declared that he would have nothing more to do with the constitution if all that we would get were responsible government. Does he expect anything more? Is there any difference between responsible government as defined by Sir Malcolm Hailey and the seed of Dominion Government as now interpreted by Sir Samuel Hoare? It was clear that the White Paper scheme would be a retrograde move on the Montford Reforms. If the choice is between the existing constitution and the White Paper constitution, we would unhesitatingly vote for the present *regime*. In this view we are in the illustrious company of leaders like Rt. Hon. V. S. Srinivasa Sastri and Mr. Sachidananda Sinha. The White Paper may be all that Sir Samuel and his friends claim it to be. But it is not what will facilitate the growth of a united India and a unified Indian nation. It is a scheme that will cause internecine warfare, that will set up section against section, community against community; it is a scheme which gives little and takes away much; it is a scheme which contains theoretical rights but practical checks and safeguards on rights; it is a scheme that will for ever destroy all hopes of aself-governing, revivified and reunited India. We would take much less than what is contained in the White Paper if it leaves with us much more of what we have already. Sir Tej Bahadur himself knew and realised that the White Paper scheme was all this. Yet his hope of achieving the impossible got the better of his judgment and discretion. So you find the Saprus all gathered in London in the fruitless mission of improving the White Paper; and if, now and again, they exclaim, in a stray moment of vivid realism, that they would have nothing more to do with the constitution, we could only say that this kind of remark would be put down for sheer petulence by the Britishars with whom they are now engaged in the gratuitous task of pleading India's cause.

THE WILL TO PEACE

Once more India has seen the olive branch torn and trampled. After a session of an informal Conference of Congress leaders, of the proceedings of which, there is a yet no anthentic account, Mahatma Gandhi prayed for an interview with H. E. Viceroy with a view to explore the possibilities of peace. The request was promptly refused with a re-affirmation of the Government's position that there can be no question of treating with the Congress so long as the civil disobedient movement is not unconditionally abandoned. The Mahatma's attempts to disabuse the Government of the whim that the Congress still holds out the threat of civil diobedience have failed. After two such rebuffs in quick succession, for which Gandhiji is blamed by all his friends and followers, the Mahatma is pondering over a situation from which any lesser man would have fled in despair. The facts of the situation so far as the Congress is concerned are quite clear. In its own ranks there is a large volume of definite, if not, probably, determined opposition to the revival of civil disobedience in any form. Amongst its sympathisers in the country the feeling is growing that the conditions in which the weapon of civil disobedience could be effective are of the past and that a change in strategy and tactics is called for. As for Government they have reason to feel they have seen the storm at its worst. Whether the victory might not prove to be of the Pyrrhic kind is a question which never occurs to one in the first flush of truimph. And so it happens that while Gandhiji is worried over how best he could give effect to the Congress will to peace, the Government are content to repeat an oft-repeated formula.

* * *

For those who are not in the thick of the fray the unconditional abandonment of civil disobedience with a view to qualify for an interview with His Excellency may easily suggest itself. But it is of scarcely less importance that the country at large, if not the Congress itself, should know what the Government have to offer to Congress as a reward of its sweet reasonableness. We suspect, we are sure, that the Government have no concession to make to the Congress view point in regard to the new constitution. To take part in the political life of India with in the limits of the new constitution is not a privilege which Congress need get from the Government immediately and on bended knees. The test of all manner of statecraft lies in the actual working of the new constitution and it is inconceivable that congress men could be kept out of it. In a situation like this, though we confess we do not see any practical advantage to Congress from continuing to hold the threat of civil disobedience, we do believe that the Government have an obligation to give some indication of what they have to offer to a Congress whose views on the question of reforms they unceremoniously flouted on the occasion of the second Round Table Conference.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

WHERE IS THE BLACK HOLE?

The Census Report of the Bombay City issued last week-end by Mr. H. T. Sorley makes piquant but painful reading. He points out that the average number of persons per room in one room tenement, which forms 81 per cent. of the total number of tenements, is 4.01, which, by Western standards, means too gross over-crowding and, even by Indian standards of city life, must be called bad. On a further analysis, the position seems to be even darker. 33 per cent. of the population lives in rooms occupied by more than five persons at a time ; and one per cent. in rooms occupied by over twenty persons at a time. Such conditions, says the author of the Census Report, must be more reminiscent of the black hole of historical memory than of any modern city pretending to sanitary living conditions. Turning from percentage to actual numbers, 15,490 persons live in rooms occupied by 20 persons or over each. The number of persons living in rooms containing from six to nine persons each is 256, 379, and the number of persons living in rooms occupied by ten to nineteen persons each is 80,133. "Thus even if all the persons occupying the rooms containing only five persons and under were free from over-crowding (which is the opposite of the real facts) it would still be true that 352,002 persons or 30.3 per cent. of the total population of the city are living in conditions of the greatest overcrowding". Turning now to tenements, the following are the relevant figures: Occupied tenements in the city come to 244,121, of which 197,516 consist of only one room. One room tenements form 81 per cent. of the total tenements in the city ; and they are occupied by 791,762 persons or 74 per cent. of the population of the city. The average number of persons per room in this class of tenement is thus 4.01. The broad fact, therefore, is that out of every four persons in Bombay three live in single rooms and that in these rooms, with each of them, there are at least three other persons. What are these one room tenements? The average floor space available for each occupant in these tenements cannot be more than what can be covered by a small mat. The result is that the streets are used at nights as sleeping places. What else could one expect from such over-crowding as is conclusively proved in the Census Report? But, obviously, the street should not thus have to be used as a safety valve against house inadequacy. Mr. Sorley draws the following general conclusions :

"(1) If an average of more than two and a half persons per room were taken as indicating over-crowding in Bombay, 86 per cent. of Bombay's population would be considered to be over-crowded and housed so inadequately that the streets have to be used universally to supplement the sleeping accommodation which the houses themselves cannot provide;

(2) 96 per cent. of the individuals composing Bombay's population do not know what having a room to themselves means;

(3) Only 4 per cent. of the population live in conditions which ensure reasonable privacy and domestic seclusion."

The total number of one-roomed tenements returned at this census is 197,516 as against 175,001 in 1921. Of these 997 contain more than one family as against 3,126 in 1921. 65 per cent. of these tenements contain two families and 18 per cent. contain three families. Single rooms containing more than three families are not few.

* * *

Who is responsible for this state of affairs? Whose duty is it to take definite measures for mitigating, if not ending, this scandal? Can any city with so grim a record have cause for pride, however blest it may be in other respects? Is this appalling condition of housing in Bombay attributable to ignorance, or callousness, or lack of a sense of social duty or civic self-respect, or lack of the necessary resources? It cannot be due to ignorance. Anyone who has lived in Bombay is made painfully and vividly aware of this excessive over-crowding in a hundred different ways. The powers-that-be, however comfortably lodged themselves, could not be unaware of the slums where 96 per cent. of their poorer brethren live. Nor could we say that this scandal is to be explained on the score of callousness. Bombay is a city where have lived men of great generosity and vast charities. In no other city have the rich men and the more affluent of the middle classes set apart such large sums for public charity. As in the recent scheme of the Wadia brothers, attempts on an organised scale have been, from time to time, made for providing cheap accommodation to the poorer classes. It is true that a large part of the charities has been sectional. Nevertheless, if a good few sections have philanthropists who look after them, the hardships of the general population are likely to be greatly alleviated. Nor could we say that social reformers are sparse in number or lukewarm in enthusiasm in the Western Capital. And no citizen of any city has more thrilling and more genuine pride in his place than is the Bombayite. Lack of resources is not a plea that will hold water. When Lord Lloyd appealed for the loans needed for his wild-cat schemes, there was no dearth of money.

* * *

A small section of his schemes pertained to the improvement of the slums. Fairly considerable sums were spent on the building of chawls for labourers. But just as every project associated with that hot-headed and self-willed Governor had been hustled and rushed through without any proper investigation or careful scrutiny, so were the chawls built without any reference to their suitability for the workmen. The chawls are there lines and lines of them. They are all unoccupied. We have, on the one hand, a preponderating majority of the population living in conditions to describe which 'over-crowding' is a mild word ; we have, on the other hand, these bleak, bald tenements unoccupied by men and haunted by the ghost of vacancy.

* * *

While we would be the first to pay our full tribute to the social zeal, the generosity and charitable disposition, and the ample resources of the magnates of Bombay, and while we believe that, in an individual capacity, many of them have done great service to their city specially in regard to the providing of better amenities for the poorer classes, we are, however, inclined to think that the vested interests of that city, as a body, have failed to do the duty expected of them. The industrial concerns located in Cawnpore have built neat and healthy quarters for most of the workmen employed in them. Binnys in Madras have every cause to feel proud of the manifold ways in which the labourers' needs are catered to. The jute mills of Calcutta have provided accommodation for a goodly number of the total workmen serving therein. It is only the Bombay mill industry which has spent practically nothing on the provision of housing accommodation for its labour. In this connection, Mr. Ahmed, F. Currimbhoy, Acting Chairman of the Bombay Millowners Association, states that the millowners of Bombay have always

welcomed every effort to improve housing conditions and that some of them have even diverted valuable business capital and set up houses for their workmen. We wish to draw pointed attention to the significance of the word "even" in the last sentence. Mr. Currimbhoy seems to imply that the millowners have done something more than what was expected of them. This impression is confirmed by a subsequent passage in the interview which he gave the *Times of India*:

> "I myself object to the attempt that is being made to make millowners responsible for bad housing in Bombay. Millowners are not the only large employers. There are other large corporations like the Gas Company and the Tramway Company. There are the two railways, employing many thousands; there is the Bombay Port Trust, a statutory body, and there are Government departments such as the Royal Indian Marine Dockyard, Post offices and the Police Department, who have many employees. None of these have made adequate arrangements for housing their employees. Outside Bombay, excepting a place like Jamshedpur, where industry is located in an uninhabited place, no suggestion has been made to employers to attend to the housing of workmen. In the United Kingdom any attempt to foist the general obligation of housing on the head of the employers would be resented. There it is regarded as the duty of the municipalities and local bodies who receive special finance and encouragement from Government".

It will, thus, be seen that the employers of labour do not feel that they have any responsibility in the matter of the housing of workmen. The latter have to accommodate themselves as best as they may. If the municipalities or the Government would take up the problem, well and good. If not, the industrialists, at any rate, would not wince. Their withers are unwrung. The gall jade, according to this interpretation, is the Bombay Corporation or the Bombay Government.

* * *

Now, what did the Bombay Government do? On the plea of improving and developing Bombay, crores on crores of rupees were raised and spent. We have electric trains; asphalt roads; reclaimed land which merchant princes can buy; beautiful drives; resplendent electric lighting; central railway stations which should be the envy of every other centre in India. We have all this as part of the development programme. The only item that the development programme did not include was the entire removal of the slum area. The rich men of Bombay have now better amenities, thanks to Lord Lloyd's schemes. The poor men of Bombay have worse conditions than before; and after the bankruptcy caused by Lord Lloyd, there is no authority, governmental or otherwise, which can find the resources for setting right the scandal. The conclusion is, therefore, this: When Mr. Sorley's successor in 1941 comes to write his census report, he would have an even more pitiful tale to tell.

THE ASIAN ASSURANCE CO.

The fifth valuation of the assets and liabilities of the "Asian" for the four years ended December 31, 1932 has disclosed a substantial surplus. In assessing the results of the valuation it is necessary to bear in mind the fact that the valuation has been made at a time when conditions in the money market impose considerable extra care on the valuing Actuary to arrive at a just and reasonable estimate of the position of the company. The Actuary should not, on the one hand, allow an over-cautious policy to present a too unfavourable picture, nor, on the other hand, find a surplus, made possible by laxity in the principles of valuation. In the light of these observations, it is to be noted that the present valuation has, on the whole, been made on a just basis. The basis adopted for the valuation has been as follows: The mortality according to the H. M. table has been assumed with an addition of 6 and 5 years to the real ages for whole life and other classes of policies respectively. In view of the Actuary's observation that the mortality among insured lives is improving, the basis assumed is sufficiently liberal.

* * *

The rate of interest assumed for purposes of valuation was 5 per cent. It is here that a remark is, perhaps, called for. During the past two years there has been a steady decline in interest rates, so that 5 per cent. for an average rate is somewhat too high. Though the rate of interest as calculated on the life fund and the share capital together actually realised by the company has been 6 per cent. during 1932, a wider margin between interest actually earned and that assumed is necessary in order to ensure a safe estimate of the liabilities. The company, however, seems to have had opportunities of making remunerative, but safe, investments and hopes to be capable of making such investments in the future also.

* * *

The provision for expenses and profits is made at the rate of 19 per cent. for with-profit policies, 17 per cent. for policies in the survival bonus branch and 14 per cent. for without-profit policies. The provision is the same as at the time of the previous valuation, though the renewal expenses ratio has gone slightly higher by about 1 per cent. during the period under valuation. This increase, however, is attributable to the abnormal trade depression, which resulted in a larger proportion of surrenders and lapses. A further provision for profits in the case of with-profit-policies has been made, which is expected to maintain, in future valuations, the rates of bonus declared at the present. The Actuary goes on to observe that "as compared with the size of your premium rates, relatively to those of other companies, your participating policy holders are getting quite a substantial rate of bonus". In order to ensure a still better result in future valuations he recommends a moderate alteration in rates of premium. An unhealthy competition for securing business by rate-cutting has reduced the margin of profit to very narrow limits. The bonus rates of insurance companies have a direct relation to premium rates. A larger initial premium really results in increased interest earnings and in higher bonuses being declared. A scientific policy in this respect is absolutely necessary.

* * *

The total surplus disclosed by the valuation, including the interim dividend already paid, is

CALCUTTA

Rs. 2,87,320. The Actuary has recommended a uniform reversionary bonus at the rate of Rs. 18 and Rs. 14 per thousand per year for whole life and other kinds of policies respectively.

* * *

The company is to be congratulated on the progress it has achieved since the last valuation. The first bonus declared by the company in 1926 was at the rate of Rs. 7-8 and Rs. 9 per thousand per year. Three years later in 1929, they were increased to Rs. 9 and Rs. 12 per thousand and now the company has been able to declare Rs. 14 and Rs. 18 respectively, thus practically doubling the rates in seven years' time. The Actuary has rightly sounded a note of caution against excessive gratification on the part of the officers of the company at the results of the valuation. In these days of increasing competition, no amount of care and vigilance can be too much in the matter of efficiency of organisation and economy of expenditure.

* * *

The surplus of Rs. 2,87,320 has been distributed as follows: According to the articles of association of the company; to reserve fund, Rs. 3,453, to dividend to shareholders for the last four years at 6 per cent. per annum free of income tax Rs. 48,868, reversionary bonus at Rs. 18 and Rs. 14 per thousand per year for whole life and other kinds of policies respectively Rs. 2,31,343, and to be carried forward Rs. 3,657.

* * *

By the time the next valuation becomes due, the Company would have completed 25 years, and the Directors are considering a special "Silver Jubilee Valuation" to mark the Company's Silver Jubilee.

WILL INDIA FOLLOW AMERICA.

Last week we afforded in these columns an enquiry into the economic programme which Mr. Roosevelt has framed for the American Government with a view to engineer a revival of trade. Our purpose in doing so was to stimulate the interest of the general public in this country in the attempts made by the Governments of foreign nations to improve the economic well-being of their subjects, and to set them thinking about the lines on which India also may make similar attempts at revival. There is, it must be confessed, at the outset, little or no parallelism between present conditions in the United States and present conditions in India. To realise the gulf between the two, it should be sufficient to point out that, according to a board of experts in the U.S.A., that country has sufficient capital equipment to maintain the whole population in comfort with no more than a seven hour day and a five day week. India can assuredly make no such boast. Despite this difference, the manner, in which President Roosevelt has sought to stimulate business activity and the exchange of goods and commodities, is not altogether without its value for those who are engaged in similar problems in India. The principal points about President Roosevelt's scheme are:

(1) Inflation, or rather a promise of inflation, which encourages a flight from the dollar into commodities.

(2) The re-organisation of agricultural production and markets through a reduction of acreage and the expansion of consumptive demand.

(3) The regulation of industry by the institution in the case of each industry and trade of what is known as a code of fair competition providing for an increase of purchasing power through lesser hours and higher wages; and

(4) The institution of large schemes of public works.

* * *

It is essential, therefore, that any attempt at revival of trade in India, if it is to be after the American model, should examine the possibility of adapting these main ideas of President Roosevelt to Indians conditions. Though President Roosevelt's programme seems to be of an eminently practical character, there is still discernible in it the influence of different schools of thought on questions of economic organisation. It has been aptly pointed out by a writer in a London financial daily that in formulating his scheme of revival, President Roosevelt had freely partaken of the ideas of Guild Socialism, Fascism and Technocracy. The influence of Guild Socialism is seen in the insistence on the formulation of codes of fair competition for every given industry. For the Industrial Recovery Act provides for the imposition by the President of a code of competition on those industries which fail, for some reason or other, to produce one on a voluntary basis. The idea of avoiding all possibility of conflict between labour and capital through the insistence on higher wages, commensurate with the increase in prices shows clearly that the achievements of Fascism in Italy are not altogether lost upon the American President. Even more than any specific act or policy, Mr. Roosevelt's determination to deal firmly with "big business" is itself a tribute to the grit that Signor Mussolini has displayed in his government of Italy. The advocates of technocracy might, likewise, justly claim that the President is indebted to them for his attempts to balance demand and supply and to order the general economic activity of the nation as a whole.

* * *

How far can India emulate the example of President Roosevelt in this matter? If we take the programme of President Roosevelt in the order in which it is stated at the outset, inflationism takes the pride of place. Logically as well as chronologically, the idea of devaluating the dollar takes precedence before all others in those developments in America which may be generally described as an incipient revival. It is difficult to say how far an inflationary policy might be immediately effective in bringing about better conditions of trade. In a country, where the speculative habit is highly developed, the anticipation of inflation would bring into being a large scale buying movement which may be relied upon to take prices on to higher and higher levels, till there is reason to believe that the prospect of stabilisation is near. In India, however, where the speculative markets are not so highly organised, a sudden upward movement of prices is hardly to be expected merely from the possibility of inflation. Even if speculative movements should be afoot, it is more than doubtful whether the benefits of a higher level of prices will reach down to the masses.

* * *

As for such measures as reduction of acreage, they can be effective only in a province like Bengal

Life policies issued by this Company are scientific, up-to-date and designed to meet individual requirements at competitive rates of premium.

Agency Terms are unique and treatment sympethetic.

THE INDIAN MERCANTILE INSURANCE CO., LTD.,

11, Bank Street, Fort, Bombay.

where jute forms by far the greater part of agricultural production. A government truly solicitous of the interests of the people and endowed with vigour and determination, would long before have adopted comprehensive measures for regulating the jute trade in all branches. The fact that jute represents by far the geater part of Bengal's annual output of wealth has, in fact, been responsible, for the increased misery that is noticeable in this province. The same circumstance would have been utilised to enable the province to resist the disastrous effects of the present depression. But in the nature of things, a comprehensive scheme for the regulation of the affairs of the jute trade would take time and must necessarily be left out of the scope of the present discussion.

* * *

In Industry, the problems in India are a striking contrast to the problems in America. While in the latter country it is a question of enabling the capital equipment to be utilised in full, in the former, the task is one of instituting new forms of activity and expanding those already in existence. It is happy to recall that during the last two, three years India has not been wholly stagnating in the matter of industrial development. Thanks to the financial embarassments of the Government and the growing pressure of public opinion, conditions have been created in which not only has the cotton mill industry shown striking expansion, but practically a new sugar industry has been brought into existence. India has advanced so far in the matter of encouraging the flow of capital into sugar manufacture, that the representatives of this country at the World Economic Conference have had to put up a stout resistance, not only to the general question of the reduction of import tariffs, but also to the proposal of the committee on production and marketing, that countries attempting to institute a sugar industry should desist from such efforts. The actual effects of the growth of numerous sugar companies on employment are yet in the future. But it is certain that owing to the development of numerous sugar companies, not only will there be an increase in the seasonal employment in sugar factories, but there will be an expansion of the production of sugar cane also.

* * *

The results so far obtained in the case of the sugar industry encourages the hope of success in other industries. The Government have all along been neglectful of the interests of small industries. In fact, some of them have been hard hit by the changes in the duties following the Ottawa Pact. Our Tariff Board has spent the greater part of its attention on the cotton textile and steel industries; and the protective duties levied in recent years have been mainly for their benefit. It is time that expansion of productive activity in other lines is actively sought for.

* * *

It is in the sphere of public works and expansion of employment to normal proportions that the Government can take steps which can have immediate effect. And it is unfortunate that it is just in this sphere that the outlook is growing darker. In his address to the Budget session of the Legislative Assembly, H. E.. The Viceroy raised the hope that before long the Government would embark on a programme of new capital expenditure. He pointed out two reasons for such a course. One was the neglect of all development during the last few years, for reasons known to all. The other was the availlability of capital on terms on which it would be possible to employ them with safety to the investors and profit to the Government. The Viceroy also foreshadowed the Mitchell-Kirkness Enquiry, the results of which were published a little later, and suggested that, as a result of the co-ordination of road and rail transport, the Railways might be enabled to take on new schemes with more hope of making them a financial success. We were among the first to welcome this announcement and to encourage the Government on the course indicated in the Viceroy's speech. But within a month Sir George Schuster was found to throw cold water on the hopes raised by His Excellency. His ways and means budget made but a paltry provision for capital expenditure on railways; and what is worse, he clearly stated that the enquiry into the road and rail problems would not indicate any scope for new productive schemes. At any rate, he added, such schemes, as it might be possible to formulate, would not be ready for execution in the financial year 1933-34. The inconclusive deliberations of the Road Rail Conference at Simla and the tardy progress of the whole question of co-ordinating the two systems of transport have dispelled the last hope of any programme of new capital expenditure being taken up during this year. We ask whether in the light of what has been achieved in countries like Italy

and Germany and what is being attempted by Mr. Roosevelt in the U. S. A., Government will not reconsider their decisions and explore the scope for capital expenditure. It would indeed be well if all connected questions could be examined together and decisions made only with the utmost circumspection. But in a country, where the proportion of successful new projects to the total is lamentably low, an austere attitude in the present juncture must be said to lack all grace. There were countless projects which were devoid of both immediate and distant advantages. That capital projects at this stage of the country's economy havean immediate advantage, few will deny. The Committee of the World Economic Conference which dealt with this and allied subjects discussed a motion recommending the institution of public works. The French Delegation was the author of the motion, and it was Mr. Runciman who successfully opposed it. It is to be feared that in this as in so many other matters the Government of India are taking the cue from the British Government at home.

It is in regard to the question of expansion of employment that one comes across the most wooden ideas in this country. We are, for our part, convinced that the time is come when for political and social, no less than economic reasons serious attempts should be made for the mitigation of evil of middle class unemployment. If we put this class foremost, it is not because of any bias in favour of this class but because of the recognition that unemployment among the mass of manual labourers is a far wider question and that we cannot even touch the fringe of that problem except by a vast expansion of productive activity similar in scope to the Russian Five Year Plan. Besides for the masses of this country it is a question less of unemployment than under employment. It cannot for these reasons be dealt with in an enquiry into what may be called on the analogy of the Monetary Sub-commission of the World Economic Conference immediate measures. The problem of middle class unemployment on the other hand lends itself to consideration under this head. We are of opinion that the Commerce Member should take up this matter as his personal concern. Just as Mr. Roosevelt has been able to make progress through direct contact of the administration with the various industries, it should be possible for the Commerce Member to persucde the various commercial bodies to adopt the principle of slightly reduced hours of work for the clerical staff and if necessary, a slight cut in salaries with a view to release a certain amount of work and pecuniary resources for absorption of the unemployed. As most of the people who are employed are doubtless contributing to the maintenance of their unemployed relatives, the cut in salaries would only mean a regularisation of unemployment relief. Government themselves should set an example in this regard by reabsorbing the men who have been thrown out of work during the recent retrenchment. And it is the duty of the Commerce Member to plead with his colleague at the head of the Finance Department in this regard. Once such an example is set, it should be easy to persuade public local bodies and private business corporations to follow suit. The sheltered industries have an indisputable obligation to meet the public requirements in this regard. And as for other private institutions, it must be remembered that there are many others which take the utmost advantage of the fact that the factory Act does not apply to clerical establishments. Onpain of extending State regulation to this sphere, they should be persuaded to increase their establishment by a stipulated percentage. The advantages of affording such relief to a class which is in reality the most depressed in India to-day are too obvious to need exaggeration. We trust that our proposals will meet with the consideration they deserve from the authorities for whom they are intesded.

STRAWS AND WAFER CAKES.

Sir Samuel Hoare has been particular that Indians should know his exact mind; and, towards this end, he has been giving evidence in the frankest manner before the Joint Parliamentary Committee. Most people can appreciate frankness; but few have any leanings for brutal frankness. We should think that there has been brutal frankness in the statements made by Sir Samuel. It is good to know where we stand. For this mercy, much thanks. But why should there be any objection if, when we know where we stand, we have feelings of extreme disquietude about it? We have learnt a lot from Sir Samuel's evidence; but it has been a painful and saddening learning. In the course of the proceedings, there were quite a few piquant observations on the different kinds and shades of a pledge. One would have thought that a pledge, in its very conception, is so sacred that mental reservations or convenient qualifications are incompatible with a genuine pledge. Either a pledge is a complete and full pledge, or it is no pledge at all. A conditional pledge is a contradiction in terms. You cannot have a half-hearted apology or reluctant forgiveness or moderate chastity or qualified oath. In all these, it must be either sixteen annas quality or nothing. In his evidence, Sir Samuel suggested that the White Paper contained the seeds of Dominion Status, assuming that India's distinctive conditions would eventually be removed. Mark the word, 'seeds'. From seeds to seedling, from seedling to plant, from plant to tree is a laborious process—a process which, perhaps, this generation and the next few may not live to see. However, one should be grateful even for the seed as the White Paper itself does not mention the phrase 'Dominion Status' even once. May we not infer therefrom that Sir Samuel has, in this respect, made an advance on the White Paper?

* * *

This seed of Dominion Status provoked from the Archibishop of Canterbury the question: Does it follow that because India has not the same constitution as the other Dominions, she is to be debarred from Dominion Status? Another brutal frank person in the Committee is Lord Salisbury who took upon himself the responsibility of answering the Archibishop. Who will say that the White Paper has any resemblance to Dominion Status—answered

WORLD ECONOMIC CONFERENCE

NEWS OF THE WEEK

From Our Correspandent.

(By Cable).

London July 20, '33.

With the decision to call a plenary session, there is a true between the forces of adjournment and non-adjournment, which only proves the truth of my remark of last week that the Cosference has no energy even to end itself. The monetary enquiries are all but closed; and the Silver Committee has nothing to distinguish it from the Committees dealing with wheat, sugar or Tin. The negoliations in these are undergoing vicissitudes which cannot be easily conveyed. The Conference is dead; and except for the decline of the dollar to the old parity there could be little hope of a second convention.

July 13. A plenary meeting of the Economic Commission of the World Economic Conference was occupied to-day with the consideration of the French Resolution in favour of encouraging Public Works Schemes by international loans. Sir Atul Chatterjee powerfully supported the scheme, because of its direct bearing on unemployment and advocated large scale operations by which idle capital outside the poorer countries might be invested.

The sub-committee of the Economic Commission dealing with co-ordination of production and marketing considered the question of tin. There was before it the British proposal to consider the general question of the regulation of tin production with particular reference to the continuation and possible extension of the existing agreement among the five countries represented on the international Tin Committee. The agreement comes to an end in 1934 unless renewed. It was decided to establish a sub-committee on tin, including the countries which are parties to the agreement, and other producing countries, as well as the three consuming countries, Germany, Italy and the United States. The question of cocoa, coffee and sugar will be taken up at the next meeting of the Commission.

The President of the Economic Conference has received a series of resolutions adopted last month by the Baltic and International Maritime Conference, urging abolition of Exchange restrictions by lowering excessive tariff barriers and removing quotas, and abandonment of the policy of subsidies to shipping and shipbuilding.

July 14. The much battered World Economic Conference has decided to hold a plenary meeting on July 27th in order to adjourn. It is not officially stated to what date the adjournment will be made, but there is no prospect of an early re-assembly.

With the exception of the meetings of the Monetary and Financial Sub-commission on permanent measures for financial reconstruction, the conference discussions were carried on in private. The silver sub-committee adjourned, it is believed, owing to the action of Holland which objected to the presentation of Mr. Pittman's amended resolution, and declared that the sub-committee could not discuss it. It is said that the committee will resume on July 17. Meantime strong mediatory efforts are being made privately.

Mr. Walter Runciman threw a wet blanket on the French proposal for public works by international loans. Britains recent capital expenditure of £100 millions on works to relieve unemployment, he said, had been unduly expensive and was not likely to be repeated. He discouraged the idea of Britain lending to other countries for the carrying out of the proposal. The Chairman, M. Colijn then decided to refer the matter to the Bureau with the remark that further action was to be postponed *sine-die.*

A breeze occurred during the discussion on the Soviet Draft Economic Truce Resolution when Mr. Connolly (Ireland) who supported the Soviet Motion, attacked the Anglo-Irish Tariff war. A sharp exchange of words took place with the Chairman, after which Mr. Connolly retired still fuming, Mr. Connolly's statement covered the whole background of the Anglo-Irish disputes. He declared that an abnormal, special discriminatory tariff operated against the Irish Free State.

July 15. The World Economic Conference Sub-commission on permanent measures for the re-establishment of an International monetary standard adopted the following three resolutions.

The provision of an international gold standard; the second declaring that

The Bank of International Settlements should play an increasingly important part in co-operation with central banks not only by improving contact but also as an instrument for common action; and the third emphasizing.

The importance of adapting central banks in certain agricultural countries to the special economic conditions of those countries.

The United States' delegates did not oppose the resolutions. The Sub-committee are expected to finish their work this week. A plenary session to decide the future of the conference will follow and it is possible that the conference will re-assemble at Geneva in autumn.

July 17. The future of the Economic Conference is still uncertain. There are proposals from New York suggesting the reconvening of the Conference at Washington. Meanwhile the larger countries should seek an agreement among themselves through diplomatic channels. The American Delegation in London is reported to favour an indefinite recess leaving the Bureau to decide the date of re-convening.

July 18. A dead lock arose in the sub-committee of the World Economic Conference following the strong opposition by India, China and Spain as large holders to the suggested agreement with the silver producing countries for the limitation of Arbitrary sales of Silver. India is also expected to take a stand against any proposal for the limitation of coffee production which is to be examined by a Special Sub-committee of the Conference. Any scheme drafted will be submitted to the importing countries. There were further conversations yesterday between the representatives of the "big four" wheat growing countries and the Danubian countries and they are reported to have arrived at a tentative agreement. It is understood that the figure agreed upon is 50 million bushels.

Proposals for reorganising the World's sugar supply have been submitted to the conference by the international sugar council which recommended that

countries with large sugar imports should stabilise their home production at the present level in order to prevent the reduction of imports. The proposals include the restriction of production to home consumption by countries hitherto producing only that quantity and limiting of exports to present levels by countries not belonging to the international sugar agreement.

Certain bilateral trade pacts have been concluded. Portugal, the Swedish Government and six other governments have agreed to enter into negotiations with the United States, with a view to concluding Trade pacts.

July 19. Arrangements for winding up the World Economic Conference before the proposed recess are nearly ready. The public plenary session will be held on July 27, after which the final meeting of the Bureau will be held.

Meanwhile the conference has failed to secure the international control of silver. A greater use of silver for monetary circulation is advocated but the question of restriction of sales, to which India took strong exception on Tuesday, is left open for discussion by the producing countries. The proposal that the Council of the League of Nations should, at its next session, fix a date for an international diplomatic conference of all importing and exporting countries concerned, was approved this afternoon by the sub-commission of the world conference on indirect protectionism. The proposal is being submitted to the Bureau.

July 20. The silver Sub-commission of the World Economic Conference has adopted a report advocating an agreement between the silver producing countries, and countries which are large holders, with a view to mitigating price fluctuations.

The resolution requests other nations to refrain from further debasing the silver coinage below the fineness of 800/1000, and recommends the substitution of silver for low value paper currency. But Governments will have liberty to take any necessary action to prevent the flight or destruction of silver coinage if it rises above parity. The recommendations lapse in April next, unless a silver agreement is reached, which, itself, must not extend beyond 1937. The coffee, Tin and Sugar Sub-committees of the Conference have wound up and issued reports. The first shelves negotiations temporarily.

The second exhorts producing countries to adhere to the control scheme on the basis of a flat rate quota, urging earliest action and recommending to the countries concerned to nominate representatives to negotiate quotas with the International Tin Committee.

The third report requests the Bureau to continue negotiations. At the financial meeting of the latter committee the Cuban delegate withdrew his scheme of world-wide restriction of production in the face of innumerable objections to it.

LAST ROUND IN STABILISATION CONTEST

DRAFT AGREEMENT AND ROOSEVELT'S REPLIES.

We give below the draft proposals re stabilisation and the two successive statements of President Roosevelt in reply thereto.

The Joint Declaration submitted on June 30, by M. Bonnet, Mr. MacDonald and Professor Moley for President Roosevelt's approval.

1. The undersigned Governments agree that:—

(*a*) It is in the interest of all concerned that stability in the international monetary field be attained as quickly as practicable;

(*b*) that gold should be re-established as the international measure of exchange value, it being recognised that the parity and time at which each of the countries now off gold could undertake to stabilise must be decided by the respective Governments concerned.

2. The signatory Governments whose currencies are on on the gold standard re-assert that it is their determination to maintain the free working of that standard at the existing gold parties within the frame work of their respective monetary laws.

3. The signatory Governments whose currencies are not on the gold standard, without in any way prejudicing their own future ratios to gold, take note of the above declaration and recognise its importance. They re-affirm as indicated in paragraph 1 above that the ultimate object of their monetary policy is to restore, under proper conditions, as international monetary standard based on gold.

4. Each of the signatory Governments whose currencies are not on the gold standard undertakes to adopt the measures which it may deem most appropriate to limit exchange speculation, and each of the other signatory Governments undertakes to co-operate to the same end.

5. Each of the undersigned Governments agrees to ask its central bank to co-operate with the central banks of the other signatory Governments in limiting speculation in the exchanges and, when the time comes, in re-establishing a general international gold standard.

6. The present declaration is open to signature by other Governments whether their currencies are on the gold standard or not.

The following statement was transmitted yesterday by the American Delegation to the World Conference to the Secretary-General of the League of Nations:—

The President has made it clear that he saw no utility at the present time in temporary stabilisation between the currencies of countries whose needs and policies are not necessarily the same. Such stabilisation would be artificial and unreal and might hamper individual countries in realising policies essential to their domestic problem. He urged the Conference to seek consideration of its fundamental task of facilitating policies by the different nations directly, not to temporary expedients, but to mitigating evils of the present economic situation.

In the hope that the United States may be of help to the Conference, to whose success and friendly co-operation the President continues to attach the greatest importance, it may be useful that we should develop this thought somewhat more fully.

The revaluation of the dollar in terms of American commodities is an end from which the Government and the people of the United States cannot be diverted. We wish to make this perfectly clear: we are interested in American commodity prices. What is to be the value of the dollar in terms of foreign currencies is not and cannot be our immediate concern. The exchange value of the dollar will ultimately depend upon the success of other nations in raising the prices of their own commodities in terms of their national moneys and cannot be determined in advance of our knowledge of such fact. There is nothing in our policy inimical to the interest of any other country, and we are confident that no other country would seek to embarrass us in the attainment of economic ends required for our economic health.

When the currencies of those great nations of the Continent of Europe—France, Italy and Belgium—depreciated over a period of years, there was no criticism from the United States, nor did we criticise their ultimate devaluation. And when Great Britain and the Scandinavian countries went off the gold standard there was only sympathetic understanding in the United States.

Great Britain has been off the gold standard for nearly a year and three-quarters, and the United States has been off for less than three months. Nevertheless, we are glad to be able to associate ourselves with the statement of British policy made yesterday, July 4, in the House of Commons, by the Financial Secretary to the Treasury, when, speaking in the name of the Chancellor of the Exchequer, he said:—

> "My right hon. friend has on a number of occasions expressed the view of His Majesty's Government that, although a return to the Gold Standard might be our ultimate objective when proper conditions were assured, we must reserve complete liberty to choose both our own time and parity. He does not think he can usefully add anything to that statement now."

If there are countries where prices and costs are already in actual equilibrium we do not regard it to be the task of the Conference, as it certainly is not the purpose of the American Government to persuade or compel them to pursue policies contrary to their own conception of their own interests.

It is not sufficient to escape from the present evils. But it is our duty to consider together how to avoid their recurrence in the future. The first task is to restore prices to a level at which industry and, above all agriculture, can function profitably and efficiently. The second task is to preserve the stability of the adjustment once achieved. The part which gold and silver should play, after adjustment has been secured, would seem a further subject suitable for consideration by the Conference.

We conceive, therefore, that the great problems which justify the assembling of the nations are as present to-day and as deserving of exploration as was the case a few weeks ago; and we find it difficult to conceive that the view which it has been our obvious duty to take on the minor issue of temporary stabilisation, can in any way diminish the advisability of such discussion.

(*Continued on page 150.*)

FROM OUR READERS

RESERVE BANK OF INDIA
AND
MR POCHKHANAWALA'S MEMORANDA

THE EDITOR,

Indian Finance.

Sir,

Haven't you rather put the cart before the horse?

In Clive Street Gossip, in your issue of June 24, you tear Mr. Pochkhanawala's Memorandum to pieces. Not until three weeks later do you publish the text of the Memorandum. Now, I am not a betting man but I am willing to lay a wager that at the time when your criticism appeared, not one in ten thousand of your readers had seen the Memorandum. The result of this must inevitably have been that your readers have judged the Memorandum by the remarks you made about it, not having the Memorandum itself before them to enable them to form an independent opinion. There might have been no harm in that, had your criticisms been just. In my opinion, they are very far from being so.

If you will permit me the space, I propose to take the points you endeavour to make, *seriatim*, and to attempt to shew that, in many respects at least, you have been unjust and unfair.

You commence by saying that few of the members of the Reserve Bank Committee now sitting in London know even the A. B. C. of such a Bank, and, from that statement, you proceed to argue that there is no use in trying to instruct them in A to Z of such a project. Frankly, I cannot follow the logic of this, if, indeed, there be any logic in it. To use your own simile, not only few children but no single child knows the A. B. C. of the alphabet when it receives its first lesson. Would you, therefore, on that account, refuse to make any effort to teach it?

Mr. Pochkhanawala does not appear to you to be particularly qualified for the role of a teacher. Well, you are, of course, entitled to your own opinion but I should like to know who you think is so qualified if it be not Mr. Pochkhanawala. Throughout the length and breadth of India, he is known as a man who has built up, in the face of the greatest opposition, a banking institution that is the admiration of all who are qualified to express an opinion about banks, and, in that word "all", I include English bankers. One may not, it is true, always see eye to eye with him, but it is absurd—forgive me if I write strongly but I feel strongly—to say that he is not qualified.

You "cannot account for the poor draftsmanship, half-baked ideas, impracticable proposals and lack of precision" which you find in the Memorandum. To my mind, the wonder is that the Memorandum, or rather the Memoranda, for there are two of them, are so well written, so complete, so replete with definite suggestions and so precise on such a number of points. I do not suggest that they are perfect. But Mr. Pochkhanawala is, as you cannot be unaware, a very busy man and it is nothing short of astonishing that, in the midst of his multifarious duties, he should have found the time to draft these two Memoranda.

After stating that the original Bill underwent a large number of transformations and was eventually thrown on the dust heap, you proceed to argue that it is useless to offer any comments on any specific points and to state that such comment should be held over till the Government have shewn their hand and placed on the table their concrete suggestions. Why is it useless to do so now? If, during warfare, generals are in consultation with regard to what their next move should be, and if, without having any idea of what plans would eventually emerge, another party, who has knowledge of certain pitfalls that lie in the way of an advance, warns those generals of such pitfalls, is he to be blamed for doing so, on the ground that he did not know whether it was the intention to advance or retreat? Rather would he be lacking in his duty if he failed to give such warning. And so with Mr. Pochkhanawala and his Memoranda. It is useless to shut the stable door after the horse has got free. Yet that, apparently, is what you would have Mr. Pochkhanawala do.

With no desire to be discourteous, I am afraid I must accuse you of that very lack of precision with which you charge Mr. Pochkhanawala. You quote his statement that "very often, in well-informed circles, the question is asked, whether or not it would be possible to transform the existing Imperial Bank of India, by eliminating its commercial banking departments, in a way as would satisfy the public in general and the commercial community in particular, and the bank's own shareholders, into a body able to take the place of the Reserve Bank." You then claim to be equally in touch with well-informed circles and add that you have never heard this question seriously asked by anyone. In the next breath, you say that Sir Purshottamdas Thakurdas was the only member of the Hilton-Young Commission who belived in the possibility of the Imperial Bank being converted into the Reserve Bank. You also "think" that the late Mr. B. F. Madan supported this view. Well, it seems to me that there is "poor draftsmanship" in an article which, in consecutive sentences, can make those two entirely contradictory statements. Possibly, you do not think very much of Sir Purshottamdas Thakurdas or the late Mr. B. F. Madan. I, myself, I regret to say, know little of the latter, but the veriest child cannot fail to be aware of the fact that the former represents a very big school of thought in matters affecting finance and banking on the other side of India. Calcutta is not the only businss centre in this country, much as Ditchers like to think so Mark you, I do not say that Mr. Pochkhanawala is right in all he has written. But I do most emphatically state that you are wrong in much of your criticism.

It may be that Mr. Pochkhanawala is in error in making the suggestion he does with regard to the transforming of the Imperial Bank into a Reserve Bank and, personally, I think the idea is quite impracticable. But I fail altogether to follow your reasoning when you claim to clinch the argument by quoting a passage from the report of the Hilton-Young Commission. Is it your view that the findings of Commissions are infallible? The opinions you expressed some time ago, on the subject of the proposals contained in the White Paper, would scarcely seem to confirm that suggestion.

Having commenced your tirade by saying that it was utterly useless to make comments about a Bill that had been discarded, you now proceed to quote that very Bill in order to prove that Mr. Pochkhanawala's fears that the Reserve Bank may compete with other banks in the matter of the receiving of deposits on interest are groundless. Not content with this, you, in your determination to pick holes in every word. Mr. Pochkhanawala has written, proceed to emphasise your point by adding "by way of answer, I have quoted the assurances already contained in the provisions of the earlier Bills. "No, no, Mr. Editor. Out of your own mouth you are convicted. You cannot "have it both ways". If, as you have asserted, the earlier Bills have been scrapped, lock, stock and barrel, and if, on that account, it is sheer waste of time and energy to formulate, and communicate to the Committee in London, any views in connection with the Bill that is to be prepared, if such views are based on the earlier Bill, then you cannot utilise the provisions of such earlier Bill to refute fears that may be entertained that the new one will contain certain dangerous clauses.

You appear to think that one may as well be hung for a sheep as for a lamb, for, having once thrown over your own contention that it is entirely out of place to talk about the old Bill, you again do so in dealing with the question of the business the Reserve Bank may and may not do. You devote four paragraphs, quoting expensively from the original Bill, to prove that Mr. Pochkhanawala's fears of unfair competition by the Reserve Bank, in certain respects, are groundless. May I remind you that that Bill is on the scrap heap. Also, that you cannot have your cake and eat it; in other words, that you cannot use an argument to prove one contention and the same argument to prove the exact opposite?

Coming to the point of "the increasing competition which Indian Joint Stock Banks will have to encounter from the Imperial Bank", I find that you are "in entire agreement with this part of the Memorandum." And this is where I must cross swords with both you and him. The subject is a big one, and, perhaps, too lengthy to be dealt with in this letter, in particular, in view of the fact that my object in writing is to endeavour to shew that you have been unfair to Mr. Pochkhanawala, so that I do not feel called on to discuss a matter on which you agree with him. I will say this much, however, that it serves no purpose to cry "We are very poor man." You, yourself, more or less, make the same statement when you call attention to the fact that the most serious handicap in the way of anyone who wished to help Indian Banks was that the banks themselves would not co-operate for a common plan of action; that there exists mutual jealousy and that, even when a grave situation threatens, they will not wake up from their apathy and indifference. No one, however, can make the last accusation against Mr. Pochkhanawala. Your own biography of him, appearing in a recent issue of Indian Finance, is a sufficient refutation of any such suggestion.

I have written somewhat strongly for the reason that I feel strongly. Even if Mr. Pochkhanawala is not "particularly qualified for the role of a teacher;" even if he drafted the Memoranda in "a great hurry and without the necessary references at hand" and even if it displays "poor draftmanship, half-backed ideas, impracticable proposals and lack of precision," no single one of which contentions do I admit, I feel that, so far from criticism, he deserves the gratitude of all indigenous bankers for putting up a

fight. And—I regret to say it—I feel that Indian Finance has done indigenous banking a disservice by commenting on the Memoranda in the terms it has used.

Yours, etc.,
ENGLISH BANKER.

Calcutta, July 20, 1933.

JAPAN AND INDIAN COTTON

FACING FACTS

THE EDITOR,
Indian Finance.

Dear Sir,

I see, Sir, it is becoming the fashion to deride the Japanese boycott of Indian cotton and treat it as a *"mere bluff"* so much so that even a sensible man like Mr. Lakhmidas Rowji Tairsey indulges in a sportive fling at the Japanese boycott while discussing the Lalbaug market affair in a local paper.

Since facts are stronger than any theories or arguments, it is best to let facts speak for themselves.

Roughly speaking, India produces 60 lacs bales of cotton annually. Of this 30 lacs bales are accounted for by Indian mills and other domestic uses. The remaining 30 lacs bales are exported annually, roughly as under:

15 lacs to Japan
5 lacs to China (where there are many Japanese mills)
8 lacs to Continent
2 lacs only to England.

Thus, India has a huge exportable surplus (50% of her total production) which cannot be absorbed in India for years and years to come. It may also be noted that in spite of all the boosting of the Ottawa agreement and of the increasing use of Indian cotton by Lancashire mills, Lancashire stands as the least important buyer of Indian cotton. Besides, Lancashire wants long-stapled cotton, of which the Indian supplies are barely 50% of the needs of Indian mills themselves, who, in their turn, have to import nearly 4 to 5 lacs of foreign long-stapled cotton for their requirements.

As against this, Japan buys mostly short-stapled cotton, namely, Bengals and Omras (suitable for 10 to 16 counts spinning) of which very little quantities are being used by Indian mills, which generally spin 20 counts and over, as most of the mills are both spinning and weaving.

It will be seen from the above that Japan buys just the types of cotton which it exactly suits India to sell; and the trade, therefore, is for the benefit of both the contracting parties and equally needed by both. It is little use saying that Japan needs Indian cotton and ignoring the fact that India is equally anxious to sell her surplus produce.

Be it also said to the credit of the Japanese cotton traders that in all their twenty-five years of growing trade in Indian cotton, they have behaved magnificently in the cotton trade circles. In spite of their heavy purchases for export, there has not been a single instance when Japanese interests have tried to manipulate the market in their favour. Not even in their worst calamities like the terrible earthquake and its aftermath has any Japanese firm failed in India, leaving any outstandings worth the name. In the cotton trade, Japanese disputes, arbitrations and/or litigation can be said to be conspicuous by their absence. Indian merchants have, at times, made a grievance of Japanese traders paying better prices in the up-country markets than in Bombay; but this direct buying has necessarily resulted in better prices being paid to the actual growers of cotton by eliminating the middlemen's profits. Hence the protests even from so inarticulate a section as the growers. The Japanese buying has not only resulted in better prices being paid to growers but is also responsible for the increase in acreage and growth of Indian cotton in recent years, especially in the large tracts of Berars, Khandesh, C.P. and the Punjab.

Already, even though we are at the fag-end of the cotton season, when the bulk of the crop is marketed and stocks are relatively small, the Japanese boycott has driven prices at least Rs. 20/- per candy lower than its relative parity with American cotton previous to the boycott. The effect is likely to be more intensive and calamitous for Indian cotton growers, when the new crop comes to be marketed, should the boycott persist till then. It is a well-known economic maxim that the price of the exportable surplus governs the price of the whole crop; and according to the ever present dip in prices, the loss to the Indian cotton grower would run to the colossal figure of Rs. 6 crores (60 lacs bales=30 lacs candies at Rs. 20/- per candy=Rs. 6 crores) which he can ill afford at a time when the world price of cotton does not leave him enough to meet even his cost of production and fixed-charges such as land revenue etc.

As against this huge loss of Rs. 6 crores to the cotton grower, what is the relative benefit to the Indian mill Industry? Let the Industry answer. So far results of any appreciable benefit to the Mill Industry are not perceptible, while the dip of Rs. 20/- per candy in cotton prices is a fact which stares one in the face and cannot be gainsaid. On the contrary, the decline in cotton prices seriously effects the already crippled purchasing power of the masses and be it remembered 90% of the Indian population live on agriculture. It is, therefore, scarcely in the interests of the Mill Industry to seek an advantage for itself in a way that impoverishes the potential buyers of its cloth out-put.

Let us, therefore, concern ourselves less as to how the boycott will tell on the Japanese cotton Industry (it can look, and it has very well looked, after itself so far) and think more soberly of its effects and consequences nearer home if it is allowed to drag on through sheer obstinacy and refusal to face facts. A sort of compromise or *via media* must be found in the best interests of both India and Japan before the next crop comes on the market. The proposed visit of the Japanese delegation to Simla in August affords a welcome opportunity to end the dead-lock and it is to be hoped both the Indian Government and the Indian public will receive their best customer of Indian cotton with proper courtesy and in a fair spirit of "give and take" and not shut the door in his face to the irreparable loss and ruination of the Indian cotton growing industry, the most important and largest agricultural occupation of India.

Yours etc.
V. M.

THE READING ROOM

THE ECONOMIC FOUNDATIONS OF FASCISM: *By Paul Einzig: MacMillan & Co., Ld.: 7s. 6d.: 156 pages.*

Everyday brings its new recruits to planned economy. The convert surpasses, in zeal, even those who are born into the faith. Sir Arthur Salter is the most outstanding figure amongst the band of new enthusiasts for "plan" in national and international economy. Sir Basil Blackett sees himself led on to a recognition of the necessity of planned economy for plan in monetary affairs. Lord Melchett, though undoubtedly one of the favoured sons of traditional individualism, has yet too keen a sense of reality not to recognise the superiority of planning to the insufferable anarchy of *laissez faire*. He was among the first of British writers on modern economic problems to hold up Soviet Russia and Fascist Italy as a model for individualist Britain to copy. Into this circle of economic realists has now come Dr. Paul Einzig with his latest work on the *Economic Foundations of Fascism*. Dr. Einzig, we are told, stayed in Italy with a view to study the principles, practices and concrete results of Fascism in the land of its origin. I am not aware that Mr. Einzig has betrayed any leanings towards socialism in any of his early writings. If his exposition and advocacy of Fascism, as we have seen in the work under review, is a new development, it is a high compliment to his openness of mind and receptiveness to new ideas. But his acceptance of Fascism is not restricted to those principles of planned economy which have a special appeal, value and force during the present depression. Few, if any, of Signor Mussolini's followers could have outdone Mr. Einzig in the admiration of the tenets and achievements of Italian Fascism. In his introduction, Dr. Einzig emphasises that in writing his book "he has pursued no political object, that he belongs to no political party and intends to remain outside politics." This may be true in the sense that Dr. Einzig does not intend his book to be the means of propaganda for the establishment of a Fascist regime in Great Britain. But there is no evidence that Mr. Einzig does not approve of the political methods adopted by the Fascists in Italy. In the sphere of finance and industry, the author shows a positive preference for the indirect control exercised by the Fascists on banks and industry to the more frank systems of control in force in Germany and other countries. Dr. Einzig is not disturbed that the control of banks and industry should be maintained through the punishment of erring bankers and industrialists on a charge of "crime against the Fascist regime". That a thorough-bred Britisher should give such warm approval of these methods is somewhat disconcerting to those who see nothing incompatible between the rule of the law and the enforcement of plan in national economy. I do wish that Dr. Einzig had restricted his approval and appreciation of Italian Fascism to its recognition of the need for plan and the extent to which it has been able to achieve its aims.

It must, in justice, be said that nowhere is this approval of the methods of Fascism wholly explicit. Nor does Dr. Einzig expatiate on the political theories of Fascism. The political aspect has been referred to only in so far as it is necessary for an understanding of Fascist economy. He even expresses a mild disapproval of the dark side of Fascism, its exaggeration of nationalism to the point of aggressiveness towards the neighbours, the sanctification of political dictatorship and intolerance of political liberty. But the disapproval is more on the ground of their being unsuitable to British condition than on the ground of their intrinsic undesirability. At more than one point, Dr. Einzig is found to plead for their necessity in the conditions in which Signor Mussolini had to work; and these special pleadings are more prominent than the suggestion that they are transitory and that the Duce is attempting to put an end to arbitrary government as early as possible.

For those who feel like me that economic stability is only just as important as political freedom, it is a relief to turn to the exposition of Fascist economics. Fascism, according to Dr. Einzig, is only a compromise between the extreme individualism of nineteenth century *laissez faire* and the socialism which presses for State ownership, control and even management of all major industry. It recognises on the one hand, the importance of individual initiative and the scope for individual advancement as the motive power of economic progress. But it is by no means blind to the dangers of unregulated production or the tendency of employers to coerce the employees and *vice versa* if matters were left solely to the parties concerned. Hence the Fascist State claims, and exercises to the full, the right of interfering in the conduct of industry, to the extent necessary for maintaining the continuance of productive activity and the stability of the national economy. In other words, the Fascist State denies that economic units have any natural right of freedom from State interference. Though it seeks to preserve unimpaired the freedom of individual initiative, which is an indispensable spur to individual and national progress, it recognises that public interest may set legitimate limits to its scope; for the philosophy of *laissez faire* is only a glorification of the attitude of utter disregard for the public interest. It is in this way that Fascism establishes for itself a half-way house between capitalism, as we have seen it in the last century and a half, and socialism, as it is practised to-day in the Soviet Russia.

The economic policy of the Fascist State may be said to be defined in the Labour Charter of April 21, 1927. It occupies the same place in the history of Italian Fascism as the Declaration of the Rights of Man and the Citizen in the history of the French Revolution. The first article of faith of the Fascist Revolution, is that the Italian nation is a moral, political and economic unity integrally embodied in the Fascist State, with a purpose and instrument of action superior to those possessed by the individual or groups of individuals who compose it. And the second article of faith affirms that labour in all its manifestations, whether technical, mental or manual, is a social duty and that by virtue of this fact labour falls within the purview of the State. The Charter of Labour enjoins on the trades and professions the obligation to organise themselves in syndicates, which would, on the satisfaction of certain conditions, be legally recognised by the State and subject to State control. As far as it may be possible, the Fascist State has endeavoured to secure such regulation of economic activity as it may desire by bringing about voluntary agreements amongst the parties concerned, rather than by seeking to impose a fiat of the State on unwilling economic units. Dr. Einzig points out in more than one context that such voluntary regulation has been possible in almost all cases. But in as much as such voluntary regulation has been brought about only by holding the threat of ultimate State intervention and the dictatorial powers of the Duce, the average man could see no difference between socialist control and Fascist direction. But if means have inevitably to be suited to conditions the ends alose matter; it would be meaningless to quarrel about the manner in which the desired regulation is brought about. These methods are applied equally to industrial disputes, industrial production and banking, the three spheres in which individualism yet retains a stronghold. As regards the first, the Corporate State has banned all strikes and lockouts and exerts its full influence in the interests of a fair deal between employer and employee, so fair that it

ensures for the masses the benefits of improvement in the technique and volume of production. In the sphere of production, the Fascist State ensures the continuity of productive activity through the outlawry of strikes and lockouts. It retains, and not unoften exercises, the right to forbid the establishment of a few producing units or the increase of plan and equipment in the existing units, when, in its opinion, such increase of production is calculated to upset the balance of supply and demand. To those who fear that unexpected crises might be sprung upon the markets and the country through errors of judgment on the part of the authorities, Dr. Einzig affords the assurance that the Ministry of Corporations receives approximate output of production that is not more than a week old.

The control of production and the enforcement of industrial peace concern only the Italian nationals. What is of interest to the outer world is the policy of the State in regard to its currency and in regard to its trade relations with other countries. As for monetary policy, Signor Mussolini seems to have stood all along by the most orthodox principles. The exchange value of the lira had been, even like that of the pound sterling, fixed at an unconscionably high level; and though there was doubtless, a case for sticking to that level of exchange, so long as the world's currencies remain tied to gold, the crisis of the latter half of 1931 and the numerous currency devaluations that followed in the wake of the British example should have been a well-nigh irresistible temptation to Italy to set right the blunders of the past and to free the national economy from the unjust burdens imposed on it by an overvalued currency. Mr. Einzig would have us believe that it is part of the rigorous standards, that Italian Fascism has set itself, to continue to support the lira at its high level, in the face of the many obstacles in the way and in spite of the temptations which the opposite course offered. Mr. Einzig suggests in the concluding portions of his book that the financial integrity of Italy is so high, that Italy might continue to remain on the gold standard on the existing ratio, even if the franc were to go down under the tremendous strain that the present situation involves for all the gold standard currencies. Though the integrity, which such a course of action would point to, may excite the admiration of a few and may have for a new nation a kind of disciplinary value, it is certain that in the economic field it is only a kind of mock heroism which will provoke more derision than respect.

In the sphere of foreign trade policy, the course of events, more than the logical implications of planned economy, have thrown Italy back on a policy of extreme protectionism. During the years immeditely following the war, Italy fed herself with imported wheat, which was paid for by the large amount of remittances from the Italian emigrants settled in America. With almost all the countries barring the doors for immigration, and with the consequent fall in remittances, Italy could not find the wherewithal to pay for imports of wheat. Such a situation, the Fascists had reason to welcome; for, extensive trade relations with foreign countries might make a planned economy more impracticable and more susceptible to forced changes from without. The Government took the utmost advantage of the situation. The cessation of importation of wheat and the large-scale unemployment created by the trade depression alike pointed to the desirability of instituting large schemes of public works for the reclamation of marshes and other waste lands for the cultivation of wheat.

The success of such measures encouraged the Government to launch other schemes equally contributory to the national economic welfare. Mr. Einzig is at pains to point out the radical difference between the schemes of public works instituted in Italy and those advocated by Mr. Lloyd George as a cure for unemployment and for the crisis of consumption, which characterises the present depression. It must be confessed that the public works schemes have involved serious inroads into sound and orthodox finance. But, considering that many of the accepted principles of orthodox finance have had to be thrown overboard during the stress of present depression, and with the support of eminent economists, the actions of the Government in this regard are rather to be welcomed as pioneering in unexplored, but fertile, regions than to be condemned as a light-hearted abandonment of sanctified principles of finance. The public works schemes have, undoubtedly, resulted in the addition of income yielding property. And it is only about the future financing of such schemes that some nervousness might be felt. It would seem that the authorities regard most of their present actions as necessary only during a transitionary phase of the national economy and that the Corporate State would, before long, exert itself towards the expansion of the sphere of private business activity. In the sphere of banking for instance, the Government have more than once endeavoured successfully to change the banks portfolio of securities. That is, when industrial and banking shares tended to fall heavily, the Government, anxious to sustain the level of prices, prevailed upon the banks to buy large holdings of such securities; and, in some cases, the banks came to possess by far the biggest holding of their own shares. Repugnant as this may be to all notions of sound banking, it had been effective in the maintenance of the price of banking and industrial shares and, at a later stage, banks were, likewise, asked to change their holdings from industrial shares to government securities. When public confidence in such scrips revived, the banks were allowed greater freedom of action; and so far the revolutionary policies of the Fascist Government have had no untold developments. In the same way it is said that it is the intention of the Italian Government to hand over the proprietory and managing interests of large public works schemes to private business corporations, as, and when, the latter are ready and able to shoulder such responsibilities. It is not to be be concluded from this that Fascism signifies only a readiness on the part of capitalism to bow to expediency and, at the same time, an anxiety to assert itself when conditions are more favourable for unrestricted private enterprise. The Corporate State will endeavour, so long as public interest is put above the freedom of the individual to engage in any uneconomic activity he pleases, to circumscribe, as much as may be necessary, the limits of free initiative.

About the future of Fascism in Italy, the growing popularity of the Government and the solidity of its moral and material achievement leave little room for doubt. As for the rest of the world, Mr. Einzig, at any rate, is profoundly displeased with the weak imitations of Mussolini and Italian Fascism in other countries. One can easily guess what Mr. Einzig has to say of Herr Hitler and his followers in Germany; no one can avoid condemning the atrocities of the German Fascists. But as Mr. Einzig himself points out, Germany, as a nation, is perhaps even more fitted than Italy to put Fascist principles and methods into practice. For, the tradition of discipline is stronger in Germany than in any other nation, except perhaps ancient Sparta. But in any attempt to estimate the future of Fascism in foreign countries, it is necessary to remember that Fascism has two distinct aspects, the political, with its foggy notions of democracy and exaggerated emphasis on the need for, and value of dictatorship, and the economic, with its insistence on the dangers of communism and the shortcomings of capitalism. So long as Fascists flout the votaries of political democracy and continue to bait Socialists and Communists, despite their substantial identity of purpose with them, Fascism will be regarded as a blindly orthodox and esoteric creed which is best left as the monopoly of the land in which it grew.

CASTINGS

SPECIALIZATION in the manufacture of General Castings in these times necessitates a high degree of skill in draftsmanship, pattern-making, metallurgy, foundry practice and engineering.

These in turn call for the most up-to-date plant and machinery, the finest of raw materials and labour trained in the art of moulding on the most modern lines.

The reputation which KULTI has gained for its products, results from a combination of all these factors.

Magnificent castings of types rarely attempted in the majority of foundries are now available at prices which compete even with inferior substitutes. The same skilled workmanship is applied to all Castings whether large or small.

Thanks to adroit propaganda and a sinister conspiracy of circumstances, Japan has been made to appear as an arch-enemy of Indian industry. State subsidy, low standard of living, cheap labour, non-observance of the conventions of the International Labour Conference, depreciated currency—these are some of the reasons adduced for the tremendous competitive power of Japan. There can be no gainsaying the fact that whatever the market in which Japanese goods have entered, they have made it extremely difficult for the other brands to maintain their ground. In the past when you and I were kids, the occasional toys that we received were all of German make. The children of to-day have a more abundant supply of toys and more frequent occasions when these hilarious presents are given ; and your kid and my kid have all their shrieking time with Japanese toys. The market for toys in India has been swamped with goods from the Far Eastern Empire ; and there is hardly any rival in the field. You get a bright coloured motorcar or locomotive complete with interesting clock work for less than a rupee. These toys used to cost twice as much two or three years ago. Or take electric bulbs. Japanese bulbs can be had at a price which is an eighth of the other makes. Their cheapness is almost incredible. Fancy having a push-bike, bell and lamp and carrier included, for Rs. 15. A rubber tube for the cycle costs one anna. There is no more custom for the hospitals where punctures of tubes are repaired. When you can buy a tube for one anna, what need is there to pay two annas for mending a puncture? Some of us who are particular about using only Indian goods pay for a *ganjee* Rs. 1/4 whereas a Japanese product of identical quality could be had for five annas.

* * *

To me, the success, efficiency, and competitive power of Japan in the miscellaneous trades is far more intriguing than her interest in the piecegoods trade. I am not satisfied with the explanation that it is the subsidy of the Government which enables Japanese goods to rout the rivals in the world's markets. However earnest and all-absorbing the interest of the Japanese Government may be in the national industrial development, the Government cannot have unlimited resources to subsidise each and every industry. If there is any force in this theory of subsidy, where does all the money come from? If Japan had a gold mine ; and if the State proposes to use all that gold for giving an artificial impeutus to industry, this proposition of subsidy may be said to be tenable. The fact is that Japan has no mine which yields unlimited quantities of the yellow metal. To say that any large monetary assistance is rendered by the Japanese Government for the exclusive privilege of the industrial classes would mean, on the one hand, that the other interests in Japan are willing to allow themselves to be exploited by the industrial magnates, and, on the other, that the resources in reserve available for the Government are unlimited.

* * *

The central fact is that Japan has, somehow or other, made a success of every branch of industrial activity she has launched upon. In striking contrast to this phenomenon, India has made a hash of almost every kind of miscellaneous industry started in the last decade and a half. I have in mind, particularly, the large number of subsidiary concerns which were started in Jamshedpur early in the last decade. Sir Lalubhai Samaldas and Mr. Walchand Hirachand were responsible for the Steel Wire Products. Kilburns sponsored Enfield Cable and Enamel Iron Ware. Some other syndicate promoted the Agricultural Implements. For these concerns, Tatas were prepared to extend facilities of various kinds and of great value. Land was given cheap ; electric power at a cheap rate ; supply of raw material on a preferential basis. In spite of all these factors, there is hardly any subsidiary industry in Jamshedpur which can be said to have got ahead to any marked extent. After a chequered career, Steel Wire Products went into liquidation and the factory was sold for the bare price of the materials. Enamel Iron Ware and Agricultural Implements fared no better. Enfield Cable was taken up by the British Insulated Cables ; and despite considerable assistance rendered by the British Company, the Indian cable company has not been able to make any progress worth mention. Then, there were the concerns floated to make bolts and nuts and various other kinds of miscellaneous requirements. I can hardly think of one venture of this kind which could be said to have attained a fair measure of prosperity.

* * *

Our record is, therefore, one of dismal failure. Japan's record is one of scintillating success—so great a success, indeed, that we have to keep bemoaning the inroads made by her exports in our markets. Is there nothing that we can learn from Japan? Can't some of our industrialists spend a considerably long time in Japan and understand the technique and organising methods which have enabled Japan to produce one hundred per cent. efficiency in the industrial sphere? Is there no possibility whereby there could be co-operation between Japanese capital and Indian capital as also between Japan's Industrial leadership and Indian Industrial leadership for the purpose of starting concerns in India in a way that, while national interests will be protected, we are also assured of the co-operation of the most alert race in the Eastern world? So many of our Bombay friends keep talking about Japan in the most bitter terms. They make all kinds of allegations and charges against Japan. How many of them have taken the trouble to undertake a journey to Japan

and study the conditions on the spot with a view to ascertain the kinds of improvement that they could adapt in the case of their own concerns? I suppose that Japan would not be averse to any plan of co-operation. I see a most fruitful future if, instead of making an enemy of Japan as we are now doing, some method could be found for active and more comprehensive co-operation between the two important countries of Asia.

* * *

There can be definite stipulations laid down as regards the fundamentals of any arrangement in which this kind of co-operation is provided for. The essential principles to be insisted upon in this connection would be that in capital, directorate and the higher *personnel* of the staff, the majority should be Indians. The Japanese are practical businessmen. They are interested in the development of trade. They are not likely to seek for any political advantage. Negotiations with them on strict business lines are not only possible but desirable. When the Japanese delegates come out to India in August, I hope that some of our industrial leaders would utilise the opportunity for a discussion of questions other than cotton mill industry. In the cotton trade in Bombay, the Japanese and Indians have had ample opportunities of mixing freely and transacting business on a large scale. Never has there been a single unpleasant incident in this relationship between Indians and Japanese. The Japanese are most fair in their dealings and most honest. Failure of any Japanese firm or individual is unknown. The Japanese have a genius for fostering and developing the utmost cordiality with all business associates. This is the trait which is of happy augury in the plan which I have in mind for the inauguration of industrial enterprise in India under the joint auspices of Indians and Japanese.

* * *

"Free Lance" Writes:

I have read your account of the *Statesman's* lunch to "fellow scribes" with mixed feelings. In the first place, you have made me feel jealous. It was not asked myself on the occasion you describe; and to read of the sumptuous fare to which you and others were entertained has made me feel distinctly hungry. Not that that is a feeling to which I am a stranger. On the contrary, owing to the inability of editors to recognise brilliant writings when they see them—it may merely be crass stupidity on their part or it may be that they are jealous of people who can write better than themselves—I have frequently to go without even the half anna cup of tea to which you make reference later on.

* * *

In the second place, I heartily endorse and thoroughly welcome your suggestion that a Press Club should be started in Calcutta. All that you say about such a club making for greater good humour among journalists and driving away all the rancour that affects the writings in the daily press is, I am convinced, completely true.

* * *

I have, during the course of the last thirty years, mixed with men—and women too, but that is beside the point—of every race and of every class in India. I have had the honour of the friendship of more than one Viceroy; of many Governors; and of innumerable lesser fry amongst officials. I have known the commercial magnates of Calcutta and Bombay, of Lahore and Madras. And I count amongst my friends men from the highest to the lowest, even, I am not ashamed, rather, am I proud to say, right down to sweepers. And my experience has invariably been that such mixing has always been to the advantage both of myself and of those whom I have met.

The old saying that there is good in the worst of us and bad in the best is as true to-day as it was when it was coined. But, alas, of the years there seems to have arisen an ever-increasing tendency for those of one nationality and of one walk of life to see nothing but ill in those of another. And one of the main causes of that tendency is that we do not know each other. We lock ourselves up in water-tight compartments, so to speak; we know nothing really of the other man and of his point of view and we end by blackguarding him up hill and down dale.

* * *

A Press Club, such as you suggest, should effect much in the way of removing misunderstandings. Do not, I implore you, rest content with having thrown out the suggestion. Get on with the scheme and bring it to fruition, and, whatever you do or abstain from doing, hold firm to your suggestion that "the membership fee must be kept at a low enough figure to be within the reach of the rank and file." It is commonly stated that the salvation of the world from the slough of despond in which it is at present sunk lies with the rising generation. So, in the matter of the coming together and the fuller appreciation of each other of journalists.

* * *

It would, perhaps, be asking too much to expect that a Press Club would result in the *Statesman* writing leading articles in praise of Mahatma Gandhi. It could scarcely be expected that *Liberty* and *Advance* would launch a campaign to have Mr. Winston Churchill appointed Viceroy of India. But a youngster on the *Statesman's* staff, scarcely out of his teens, may edit that paper in the years to come: an obscure reporter of *Advance* may occupy the editorial chair at a later date. It is these men who, particularly in view of the great constitutional changes that are pending, not only should but must get to know and understand those whose views are diametrically opposed to their own.

* * *

I write under a *nom-de-plume* with the definite intention that it may not be clear whether I am of Indian or British nationality and in the firm belief that I express the feelings of the vast majority of both.

* * *

A final word. I notice that *Indian Finance* is prepared to pay a donation of Rs. 50/- per mensem for one year "for the establishment of a Press Club and for the promotion of cheer and conviviality" amongst its members. I am always not only willing but anxious to do my share in any good movement and I, therefore, have great pleasure in answering your query, "Any response?" with an emphatic "Yes." If you will be so good as to send me—by return post if possible—your first fifty rupees, I will see that at least one journalist immediately indulges in both cheer and conviviality.

THE GATEWAY OF INDIA

(From Our Correspondent).

Bombay, July 12.

Sir Oracle has spoken: Japan's boycott will benefit Indian agriculture more than Indian Industry! : The lady doth protest too much: why not admit the facts and proceed to the next stage? :

Sir Oracle has spoken. The epochal utterance refers to the much-vexed question of the effect of Japan's threat on the value of the produce of the Indian cotton grower. It is to be hoped that this reassuring message will be translated into all the Indian languages, millions of pamphlets published in the various vernaculars, and these copies distributed free and gratis in all the cotton growing areas. If the agriculturist finds that he gets a few currency notes less for his cotton, he may take comfort that he is in receipt of these valuable "notes" containing the precious message.

In an earlier communication, I referred to the return of Sir Victor Sassoon to India, despite his disgust at the foul tactics of the political agitators. At one stage, the noble Baronet was convinced that India was not good enough for one of his taste and standing. He went further East; conditions there did not appear to have been more suitable to his taste and refinement. He is, therefore, back in India; and he is utilising his time to study some of the local problems and to air his views for the edification of all and sundry.

As one who controls a big group of cotton mills, Sir Victor has ample opportunities of studying first-hand the various problems connected with cotton. This study leads him to a conclusion, which is, fortunately, in accord with his own interests. Far from the higher duties of Japanese goods inflicting any hardship on the Indian cotton grower, the latter stands to benefit considerably.

Sir Victor's argument is simplicity itself. Japan has, insidiously, caused a change in the taste of the masses in the matter of quality of cloth and yarn used. In the fomer years, the largest demand was for lower grade of Indian made yarn and cloth, the bulk of which was produced from Indian grown cotton. But Japan has been selling cloth and yarn of a higher quality at such low prices as to enable the higher quality stuff to absorb a considerable part of the demand which used to be satisfied by the lower grade cloth and yarn. There has, thus, been demoralisation in the taste of the masses. If, therefore, Japan is prevented from selling cotton manufactures to India, the population would be easily cured of this latest vice. They will go back to the coarser products of the Indian mills. This means that the Indian mills would be buying more of Indian cotton. The cotton grower will, therefore, be benefitted.

What happened till now was that by stifling the demand for cloth by the Indian mills, the latter were in their turn unable to buy as much Indian cotton, thus dropping the prices and enabling Japan to buy it more cheaply for manufacture into the lower class of yarn and cloth, which are sold in other parts of the world, notably China.

In other words, Japan uses non-Indian cotton for the manufacture of the goods sold in the Indian markets. *Ergo* the stoppage of Japanese cloth from India will inflict no hardship on the Indian cotton growers. On the other hand, Japan uses Indian cotton for the manufacture of the goods sold in the non-Indian markets. She will, therefore, continue to buy Indian cotton. Otherwise, says Sir Victor Sassoon, Japan would find that the Chinese mills using Indian cotton would be in a position to take business away from the mills in Japan, quite apart from the possibility of other countries being able to compete with Japan in their foreign trade using the cheaper cotton.

Looked at from whatever point of view, the agriculturists of this country cannot be adversely effected. On the contrary, they will be better off if Indian mills take an active part, and succeed, in reviving the taste for a lower grade of cloth thereby finding it possible to end the present phase of divided love between foreign and Indian cotton.

Due to his connection with the mill in Koilpatti, Sir Victor has something to say about the consumption of yarn in South India. Referring to Japanese yarn he said: "In the case of Japanese yarn, I am thinking primarily of Southern India, where this yarn has lately been imported in largely increasing quantities for use by hand-looms. Here we find that imported yarn and of 40' upwards made from American cotton is restricting the consumption of yarn made by the South Indian mills out of local cotton which obviously must bear hardly on the cotton cultivator."

If you ask the cotton grower in Coimbatore, Madura or Tinnevelly districts, he will tell you that his hardships are due not to any reduced purchases by the South Indian mills but to the closing of the numerous purchasing offices that the Japanese firms maintained in the various cotton centres. There is a considerable amount of unemployment among the middle class people, as the Japanese cotton houses had nearly one hundred agencies in the Madras Presidency. The rural interests as well as the middle class interests are in great distress mainly because of the curtailment of Japanese cotton business in that part of the country.

If Sir Victor and his friends in Bombay are really anxious to stand by the agriculturists in South India, the best thing they can do is to start a combine among themselves for large-scale purchase of cotton and to have branches of this combine in all those centres from which Japanese houses have retired.

The man in the street is inclined to think that when our millowners affirm and reaffirm that the Japanese boycott is only bluff or, in any case, can do no harm to the agricultural interests, they do protest too much. It is no use saying that Japan is not in a position to execute her threat; and it were folly to spread the illusion that the cotton growers would not suffer.

It would be far more graceful and truthful to admit that the Japanese nation are so determined by nature and so capable of joint action, that there is every need to apprehend the execution of the threat; and that as Japan consumes nearly a fourth of India's production of cotton, the cessation or reduction of this demand should have a most adverse effect on the prices of cotton in India. Failure to make an admission of this kind is calculated to lead to the taunt that it is not Japan that bluffs but our millowners.

If once that admission is made, the way is made clear for the consideration of the practical measures that should be taken with a view to make up to the agriculturists for the loss that they are likely to suffer by the boycott of Japan. In the devising of such practical measures, all those who have benefitted from the higher duties levied against Japan should be prepared to take concerted action. From this point of view, it is the cotton mills of India and Britain that have to prove that they can play the game.

Playing the game in this matter is no other than that Indian mills should re-transfer their entire affection to Indian cotton; and that Lancashire mills should start buying Indian cotton on as free a scale as Japan has been doing hitherto.

Sir Victor makes this significant statement: "Whatever may have been the case in the past, during the last year it is no exaggeration to say that 90 per cent. of the cotton used in imported Japanese cotton cloth and yarn consists of non-Indian cotton and artificial silks." If the Japanese cotton mills, which, we are told, are designed to use short staple

cotton, could shift over to long staple cotton, apparently, without any difficulty, Sir Victor should be able to persuade his Lancashire friends that the latter should find it seasy enough to use increasing quantities of Indian cotton. The plea that the British mills are provided with machinery that can use only American cotton must be met by the reminder that where there is a will, there is a way.

Sir Purshottamdas Thakurdas and Mr. H. P. Mody, who are now in England, have been having conferences with Lanchashire cotton interests so as to discuss the various problems of common interest between India and Britain so far as cloth manufactures are concerned. One may be sure that these two gentlemen will be feted properly and made much of. But much more than this is needed.

We have had constant discussions of the possibilities of Lancashire mills using more Indian cotton, without any tangible results arising therefrom. We have had quite aprofusion of pious hopes expressed. The Ottawa agreement was expected to lead to heady shipments of Indian cotton to Lancashire. These discussions and these hopes have been with us for quite a number of years. If Sir Purshottamdas and Mr. Mody are able to take matters further than the stage of hoping, their mission can be considered successful. If, on the other hand, Mr. Mody is only trying to get the support of Lancashire as against Japan, his activities will be viewed with grave misgivings and real suspicion by the public in India.

Gold, valued at Rs. 91,47,779, was exported from Bombay for foreign countries during the week ending Saturday, July 15.

The s.s. *Gange*, which sailed from Bombay for Genoa on Thursday, carried bar gold worth Rs. 42,15,048 for Naples. The steamer *Castalia*, which left Bombay the same day, carried bar gold worth Rs. 10,58,123 for Liverpool.

The P. and O. mail boat *Mantua*, which sailed from Bombay for London on Saturday, carried gold worth Rs. 38,74,608 (including sovereigns worth Rs. 1,94,043 for London). Of the amount of bar gold, Rs. 90,004 worth was for London, option Amsterdam, option Paris; gold worth Rs. 5,000,941 for London, option Amsterdam; gold worth Rs. 4,12,413 for Paris *via* London; gold worth Rs. 3,27,822 for London, option New York, option Paris, option Amsterdam. The rest was for London.

The total amount of gold exported from Bombay since Great Britain went off the gold standard now amounts to Rs. 1,45,81,46,106.

Nine thousand six hundred and fifty-three bars of silver, valued Rs. 1,54,22,167, the second and last consignment to San Francisco on account of the instalment of War debt of June 15 by the British Government to the United States, were shipped by the s.s. Ranchi which left Bombay for Kobe on Thursday night.

The silver will be transhipped at Kobe to some other steamer bound for San Francisco. The first consignment was made by the s.s. *Rajputana* which carried 9,000 bars of silver valued Rs. 1,46,49,457.

Carried forward to next account ... „ 1,04,186 3 2

Total ... Rs. 2,24,186 3 2

THE INDIAN IRON & STEEL CO., LTD.

The following was the speech made by Sir R. N. Mookerjee, Chairman of the Board of Directors, at the Annual General Meeting of the Shareholders held on July 18, 1933.

GENTLEMEN,

You have received your copy of the audited accounts and the Directors' Report for the year ended 31st March, 1933. May I take these as read?

I do not propose to deal in detail with the trading results for the year, for the accounts present to you a clear view of the situation and there is very little for me to add. You will notice that the sales have further contracted, in gross yield, by about 30 per cent., representing a drop in output of about 22 per cent. and a further regression in prices obtained for pig iron. Partly due to restricted production and partly to the continuation of the economy campaign the manufacturing and other expenses, purchases, freight and insurance show substantial reductions over last year. This is satisfactory.

The amount allocated to Depreciation this year is only Rs. 5,30,000 as against Rs. 7 lakhs last year. The exigencies of trading under the continued pressure of depressed markets has forced upon us this departure from a full appropriation. The Directors have stated in the Report the measures agreed upon with Debenture holders and your Board considers that the arrangement was vital for conserving the resources of the Company. Stocks have been reduced to the very minimum, being a little over Rs. 13 lakhs as against Rs. 45 lakhs in 1929-30. The shareholders should remember that the whole of the cash shown in the Balance Sheet will be needed to finance the operation of the Company should business warrant the second Furnace being installed.

At a time of extreme confusion and uncertainty in the trade and finance of the entire world it is not possible to plan a rational programme of development, nor can we hazard an opinion about the future. Your Board has been viewing with great concern the recent developments in Indo-Japanese commercial policy. The abrogation of the Trade Agreement has embittered Japanese feelings and threats of reprisals have openly been given. I sincrerely trust that the discussions at present going on between Great Britain and Japan will lead to the formulation of a harmonius trade policy which will help in promoting our particular export trade with Japan.

The Ottawa agreement is working smoothly so far as your Company is concerned, but business with America has become very difficult owing to fluctuations in the dollar exchange. In India itself the demand for pig iron continues poor. Our contract with the Government of India for the supply of pig iron was due to expire in October this year. Unfortunately for us the Railway Board's requirements for cast iron sleepers have been small, but the delivery date of the contract has been extended for 18 months. Our thanks are due to the Railway Board for this accommodation. We are also indebted to the suppliers of raw materials for their continued assistance.

I feel most diffident in expressing an opinion about the future. The position is most obscure but I give you the assurance that your Board and the staff, who have worked loyally and assiduously throughout, are keenly alive to the situation and will endeavour to do their best for your Company.

I propose, Gentlemen, that the Report of the Directors and the Accounts, as presented, be adopted.

THE STATE-AIDED BANK OF TRAVANCORE, LTD.

Head Office:

Alleppey

Branches:

Trivandrum, Changanacherry, Cochin, Quilon, Kottayam, Kayenkulam & Ernakulam

(Under the patronage of the Government of H. H. The Maharaja of Travancore).

Chairman:

Mr. K. C. PANDALAI, B. Sc., (Econ.)

Fixed Deposits are now received at the following rates:—

6 Months	... 4	% per annum
1 year	... 4½	% ,,
2 Years and more	5	% ,,

The interest is payable half-yearly. The Bank has made arrangements at Madras, Bombay, Calcutta and Bangalore for receiving and paying the Deposits AT PAR.

Simla, July 19.

Simla not upset but jubilant over Poona resolutions: Real psychology of jubilance: Sugar Conference did nothing: Industrial Conference ditto: Delhi—all-the-year-round Capital?

The Viceroy-Gandhi issue naturally dominates all the other topics discussed here this week. Frankly, the Government of India are pleased that Mr. Gandhi has not called off the Civil Disobedience Movement. Whatever they may say for the purpose of consumption by the public, they did not want Gandhiji to give up the movement!

* * *

The reason is not far to seek. The Mahatma, as a party leader, could have carried on a raging and tearing propaganda in the country 'constitutionally' with a view to promote swadeshi and the other movements and could have created for Government a situation of considerable difficulty. They would not have arrested him for these activities; and yet he would have roused the country once again to a pitch of excitement which would have meant the sure triumph of Congressmen at the next elections.

* * *

Now, the Government feel happy because they will, sooner or later, imprison Mr. Gandhi and such of his followers as keep to his resolve; and they will be sentenced to long terms of imprisonment so that they will not be allowed to come out till the new constitution begins to function.

* * *

The language of the Viceroy's reply is not so offensive as was apprehended at one time. Probably, this is due to the fact that the Secretary of State had to be a party to it before the reply was issued.

* * *

There is another side to the picture. The Indian Ministers, who have been here in connection with the Sugar Conference and the Industries Conference, feel that Mr. Gandhi has done the right thing to stand by his old programme. The reason they give is that there must be, in the country, an extreme party which should make the Government feel that any failure on their part to honour their pledges will swell the ranks of the extremists. They think this threat, ever hanging over the head of the Government, was responsible for the very immediate attention which the Viceroy gave to their representation against Sir Samuel Hoare's evidence in London.

* * *

There is no doubt that Mr. Gandhi's decision has been welcomed at heart by the various schools of thought, each from its own point of view.

* * *

The Sugar Conference, it is very remarkable to find, has left little impression here. In fact, the general opinion is that arguments on either side neutralised whatever effect might have been possible and I am told that it may be taken for granted that there is nothing in the proceedings of the Sugar Conference on which the Central Government as such are feeling themselves called upon to take any action. So, Sir Fazli Hussain's move has not been very fruitful. But now is the turn of Sir George Schuster. He will move slowly and without noise!

The Industries Conference proved a very happy family kind of affair. There were all sentiments and no controversies. Everyone desired to go ahead; everyone endorsed high sounding principles and all favoured the collection of more statistics. But the Conference had not a genius to guide it; so, instead of thinking in terms of industrial programme, it reviewed industrial activity and felt happy that all was well!

* * *

Simla Exodus? Are the Government serious about it? I am told that London authorities have asked for information as to whether the proposal to sink Rs. 80 lakhs in New Delhi is really meant to make the New Capital suitable for an all-the-year-round seat of Government. If so, the sanction will be given. I cannot vouch for the correctness of this statement but no one should be surprised if it were true. Too often in the past have the Government of India misled the people of this country and the authorities at Whitehall. It is time that they took a definite decision and announced it before launching on the new building plans in New Delhi.

HILL-BIRD.

(*Continued from page 197.*)

The former Bill will be limited to recess, and the latter rejected, unless the indications prove false. A Bill suspending the Rent Law for 12 months was adopted. But for this measure, rents should have already approximated to pre-war levels, in terms of the depreciated currency of to-day.

Industrial Activity.

There are signs of industrial recovery. The average daily production of coal during May was 151,874 tons against 158,316 tons in the previous month and 157,102 tons in May last year. The number of workers employed was 11,942 fewer (249,682 against 261,624 units in the corresponding month of last year). Metallurgical coke showed a distinct change for the better in tonnage. Iron and steel production markedly improved. Pig-iron output for the first five months of the year was nearly 9½ per cent. more than in the corresponding period of last year, while steel tonnage was 19 per cent. above the corresponding period. Iron and steel have, for the first time since October-November, 1931, reached the highest production level. Blast furnaces (Saar area excluded) increased by 12 since May last year. Iron and steel exports during the first five months of the year, are returned as 957,000 tons or 82,000 tons more than in the corresponding period of 1932. The result of all these increased activities, since March 1st, is calmer atmosphere.

The Central Bank of India Limited.

NOTICE

NOTICE is hereby given that the Transfer Books of the above Bank will be closed from Wednesday, the 2nd August, 1933 to Tuesday, the 15th August, 1933 (both days inclusive).

By Order of the Board,
H. C. CAPTAIN,
Secretary.

N.B.—Warrants for the Ad-Interim Dividend for the half-year ending 30th June, 1933, will be posted to the Shareholders to their registered addresses on and after the 16th August, 1933. Intimation of the change of address should be given to the Bank immediately.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN

CLEAVAGE BETWEEN FRANCE AND BRITAIN.

The World Economic Conference is drawing towards an unimpressive *denouement;* and it is rendered all the more so as there is nothing like the swift cut and thrust that bring a Greek or a Shakesperean tragedy to its close. On the other hand, there is indecision on the part of the various delegations, even after Mr. Roosevelt has made it clear that his views on the question of stabilisation remain unchanged. The formula, which was agreed to by the European Countries and by Prof. Moley, was definitely turned down by the President ; and on the receipt of the news the universal feeling was that President Roosevelt, who gave the conference, has likewise taken it away. For, more than the action of President Roosevent his words were calculated to offend deeply the tender susceptibilities of the European nations. There had been little attempt to disguise the acerbity of feeling which the strenuous efforts of France to force the issue of stabilisation had probably engendered in the minds of the American President and public. It may be that France's attempts in this regard convey an impression of sinister manœuvre; but it is hardly in keeping either with the dignity of the American President or with the objects for which the World Economic Conference had been convened, that the President should address the Conference in a vein of extraordinarily pedagogic admonition. He referred to the proposal of stabilisation as one of "purely financial and temporary experiment affecting the monetary exchange of a few nations only." While the proposals, to all intents and purposes, emanated from the World Economic Conference, President Roosevelt averred that "the world will not long be lulled by the specious fallacy of achieving a temporary, and probably an artificial, stability in foreign exchange on the part of a few small countries only." No one, doubtless, can question the right of the President to hold the view that "the sound internal economic system of a nation is a greater factor in its well-being than the price of its currency in changing terms of the currencies of other nations", or even to hold that the diversion of the attentions of the Conference to the question of stabilisation is "a catastrophe amounting to world tragedy." But the reference to "balanced budgets" and "living within means" is not only a pointed affront to the French nations, but is definitely caddish and bad taste on the part of a nation which never forgets its position as the world's foremost creditor. Naturally, the huge American deficit is not lost on the world, though the worries of the moment would not allow the nations to feel amused at this pelting of stones from behind doors of extremely brittle glass.

Mr. MacDonald on the Fence.

Immediately President Roosevelt's statement was out, the gold countries, Belgium, France, Holland, Italy and Switzerland met and affirmed their intention to maintain the free functioning of the gold standard in their respective countries at the existing gold parities and within the framework of existing monetary laws. This statement was probably intended to achieve the double purpose of assuring Mr. MacDonald, that he will not be embarassed with a motion for adjournment and at the same time inviting him, on pain of unpleasant developments, to join the gold *bloc*. Here we get to one of the dangerously weak spots of the Conference. While Mr. MacDonald, is undoubtedly, more keen in making the Conference a success, than any other statesman of his standing and eminence, he has shown himself lacking in the courage to suit the policy of his Government to the requirements of the Conference. All along he and the British Government sat on the fence, inclining neither to the gold *bloc* nor to the inflationism of the United States. But there is no doubt that the pressure of the Dominions on Mr. MacDonald has been exerted away from the gold *bloc* and nearer towards America. It might be that, if Mr. MacDonald had interpreted the Delegation of the gold *bloc* aright and afforded some gesture, either on the part of his Government or the Bank of England, of sympathy with the view point of the gold countries, he might have preserved intact the substantial agreement that existed between Great Britain and France.

Bureau Adjourns.

But Mr. MacDonald was apparently content with the questionable distinction of being the first President of a world conference to admit its real futility so early in the proceedings. The facts, as they can be gathered, are that the Steering Committee of the Conference met at 10-30 on Tuesday (July 4) and unanimously agreed that the Conference might be adjourned, as President Roosevelt's message was in contradiction with the American attitude defined in President Roosevelt's broadcast after the famous Washington conversations, in which he referred to "the setting up of a stabilisation of currencies in order that trade can make contracts ahead" as one of the four points in his programme. It was also agreed that the discussions on the co-ordination of marketing wheat, timber, etc., should be continued. A Drafting Committee consisting of Mr. Bonnet, Mr. Chamberlain, M. Colijn, Signor Jung and Mr. MacDonald, was set up to draw up final resolutions embodying the results of the Conference. The Drafting Committee which met at 3 o'clock had all but agreed to a resolution, when it was announced that the United States Delegation asked that the meeting of the Bureau should be postponed, pending an important communication. Mr. MacDonald having refused to postpone it to a later hour, the meeting of the Bureau began at 6 o'clock and the adjournment of the Conference was duly proposed. Mr. Hull protested, supported by Mr. Bennet ; M. Bonnet and Signor Jung pressed for an immediate consideration of the motion and a clash was avoided by Mr. Neville Chamberlain who proposed to adjourn the meeting till 10 o'clock on Wednesday.

Mr. Roosevelt Reasons.

The expected statement of the American President was but a feeble attempt to assuage the resentment induced by his earlier edict. It was couched in a more argumentative, though hardly conciliatory, tone. It affirms, as before, that "the value of the dollar in terms of foreign currencies is not and cannot be our immediate concern." But it pointed out with considerable force that "when the currencies of those great nations of the Continent of Europe, France, Italy, Belgium, depreciated over a period of years, there was no criticism from the United States ; nor did we criticise their ultimate devaluation. And when Great Britain and the Scandinavian countries went off the gold standard there was only sympathetic understanding in the United States." There is, thus, pleads the President, nothing in our policy inimical to the interest of any other country nor anything which can, in any way, diminish the advisability of continuing the discussion at the World Economic Conference.

Judging from the proceedings of the Bureau and the Drafting Committee one should say that the President's statement had its intended effect. Despite the widespread disillusionment about the usefulness

of further proceedings, the Conference was fairly salvaged.

The Bureau of the Monetary and Economic Conference, resuming this afternoon its discussion of the present state of the work of the Conference unanimously adopted the following resolution presented by its president, Mr. J. Ramsay MacDonald, after consultation with a number of his colleagues:

> "Whereas the Bureau is firmly determined to proceed with the work of the Conference to the utmost possible extent and as rapidly as possible.
>
> "And whereas, on account of circumstances which have recently arisen, the countries on the gold standard find themselves obliged to declare, that, for the time being, it is impossible for them to take part in any discussion of monetary questions.
>
> "The Bureau agrees unanimously to:
>
> (*a*) Request each Sub-Committee to meet as soon as possible to draw up a list of the questions which can, in these circumstances, be usefully studied by it,
>
> (*b*) Meet as soon as the reports of the Sub-Committees have been received, in order to make recommendations as to the arrangements which should be made for the further business of the Conference."

The Bureau will meet again on Monday to receive the reports requested from the Sub-Committees. The only solution that is afforded by this resolution is that a plenary session, which would have afforded a wider scope for the existing divergence of opinion, has been avoided for some time.

M. Bonnet vs. *Mr. Chamberlain.*

With the decision of the Bureau to request each Sub-Committee to meet as soon as possible to draw up a list of the questions which can, in these circumstances, be usefully studied by it, the scene shifted to the Monetary Sub-Commission for the Immediate Measures. The Chairman, Signor Jung, pointed out that there were six headings for their discussions, credit policy, price levels, limitation of currency fluctuation, exchange control, problems of indebtedness and resumption of lending. The debate, which followed, showed a cleavage between the French and the British Delegation. Mr. Chamberlain contended that all the six items are so closely connected in such a way as to make it impossible to discuss one without raising the other. And he held that it would be desirable not to exclude from the agenda any subjects, but keep them on the agenda and, if unanimous conclusions could not be had, to make such reservations as may be necessary. The Roumanian delegate, who followed, suggested that only the question of indebtedness should be discussed and that, too, from the point of view of temporary, rather than permanent, measures. The Brazilian Delegate suggested two committees, one composed of the representatives of the gold standard countries and the other of those who think that stabilisation is not a necessary preliminary to the work of the Conference.

M. Bonnet was a bit too outspoken for the hypocricy which alone will now serve to keep the Conference going. He confessed without beating about the bush, that "a short time ago the British Delegation and ourselves were at one; now there is divergence between us." He argued that, if all the six questions were so closely connected as Mr. Chamberlain suggested, it could, with equal force, point to a conclusion different from that of the British Chancellor of the Exchequer, namely, that, for the time being, the Committee must leave aside any further discussion of these questions. He pointed out that what France wanted was the monetary counterpart of the customs truce: "We have taken up that position for the last three months but subsequently events which are known to all of us have supervened." M. Bonnet conceded the utmost freedom to the United States to carry on still further the experiments they are now trying. His purpose was not to detract from that freedom, but to persuade the Committee to recognise that, so long as the United States is in that attitude, it cannot very well look forward to results. With the daily acrobatics of the dollar no one can deny the truth of M. Bonnet's contention that, "if you think you can go on doing work in circumstances in which this and that item of news causes fluctuations on the exchange, then I should prefer to believe that work in those committees is hardly favourable to the objects we have in view." Concluding, M. Bonnet pleaded for a little patience and expressed the hope that in a few weeks, or possibly a few days, the divergent views on this subject would be reconciled.

Monetary Sub-Commission continues.

But all the pleadings of M. Bonnet were in vain, and by 25 votes to 15 the World Conference Financial Sub-Commission for Immediate Measures accepted Mr. Chamberlain's proposal that it should continue to discuss all the 6 subjects of its original agenda despite the declaration of the gold countries that, "for the time being it was impossible for them to take part in any discussion on monetary questions." The voting on the motion showed that the supporters of the British resolution were the nations of the British Commonwealth, the United States, Argentina, Brazil, Chile, China, Denmark and the Scandinavian countries, Persia, Japan and Portugal. Those who voted against the motion included the Central European States. Russia abstained and the representatives of 25 States were found to be absent. The week thus closes with the gold *bloc* clearly displeased with what they regard as the sudden desertion of them by Great Britain in favour of the American view-point.

The Economic Commission, however, managed to go through its business with an expedition, which is in marked contrast to the long-drawn-out monetary debate. The Sub-Commission on commercial policy found a divergence of views amongst its members as to the usefulness of continuing all or part of the Sub-Commission's work and the Chairman was asked to summarise the conclusions of the discussion and place them before the Chairman of the Economic Commission. The other Committee on Co-ordination of Production and Marketing decided in favour of continuing the work. The Committee on Subsidies disclosed the same cleavage as obtained in the Monetary Sub-Commission; and the third Miscellaneous Committee regarded its work as independent of monetary questions. The Financial Sub-Commission on Permanent Measures is due to meet only on Monday.

Mr. Runciman on Bilateral Pacts.

Closely allied to the real work of the Economic Conference was the debate in the House of Commons on Tuesday on the Board of Trade vote. And here again the British Government showed its incapacity to meet the requirements of a progressive national and world economy. Mr. Runciman was present only in the latter part of the debate, owing to his preoccupations as *rapporteur* of one of the committees of the Economic Conference. And his mouthpiece in the House was content to express what Sir Herbert Samuel rightly characterised as "official optimism at its very worst." In fact, Dr. Bergin was so pleased with the achievements of his Government that the *Economist* is provoked to have the following just jibe at him: "Indeed, judging from his language, one might have imagined that we were at the height of a boom instead of in the depths of a depression with over 2½ million unemployed." When finally Mr. Runciman spoke, he made an effete case for the policy of bilateral agreement, which he has followed in recent months in ostentatious refutation of the

Air Mail Week.

principles by which all international conferences have sworn during recent years. If a multilateral pact between 66 nations is out of the question, no more is it within the bounds of practical politics to conclude the 2,145 separate pacts necessary to carry out Mr. Runciman's simple *recipe* of bilateral commercial understandings. He himself attempted to wriggle out of the absurdity into which he had fallen by enumerating 4 conditions which are essential for the conclusion of any multilateral agreement, (1) immediate effectiveness in reduction of excessive tariffs ; (2) a sufficiently broad basis of support ; (3) equality of sacrifice ; (4) avoidance of adverse repercussions like tariff walls. In so far as these conditions are not impossible of fulfilment, at any rate, not more than the 2,000 and odd of bilateral pacts, and in so far as Mr. Runciman recognises them to be so, their enunciation by the President of the Board of Trade must be deemed a heartening advance from the recent standpoint of the British Government.

Mutual Face-Saving.

The Conference has not been altogether sterile of any good to world trade, if it has the remotest connection with the *rapprochement* between Russia and Great Britain. Few will question that but for the arrival of Mr. Litvinoff in London in connection with the Conference no negotiations might have been undertaken for ending the tariff war between the two countries. And once they were together, the sense of mutual humiliation and blunder has helped a mutual face-saving. From the outset, it seems to have been recognised both by Sir John Simon and M. Litvinoff that there was a fair balance of affronts and blunders between the two countries and that all that was needed was to avoid every appearance of one country giving in to the other. It is said that care was taken to time the removal of the embargo and the release of the prisoners in such a way that no one side can laugh at the other for a belated climb-down. Perhaps, even the difference between Moscow and London time was calculated, with a consultation of Prof. Einstein, to ensure simultaneity. Once the prisoners were released and the mutual embargoes removed, the way was paved for the resumption of negotiations for an Anglo-Russian trade treaty. The City is watching the discussions with great interest, for it is understood that the draft treaty was based on the principle of balanced trade, by which is meant that Great Britain would allow imports into the country to the extent of Russia's orders for British goods *plus* any invisible trade items such as insurance, freights, etc. It is intended, perhaps, to rule off the books as from the date of the Treaty and keep them balanced thereafter. As Russia has been in the enjoyment of a permanent revolving credit of £10 to £12 million outstanding, these credits, apart from other outstanding Russian debts, would be repaid, only if Russian imports were to exceed purchases from Britain. That the repayment of £10 million may be jeopardised in this manner is a matter over which the City cannot help feeling concerned.

UNITED STATES OF AMERICA

FALLING DOLLAR AND RISING PRICES.

Yet another week of falling dollar and rising prices ! Mr. Roosevelt stood by the markets ; and in the face of insistent demands from the gold *bloc* and world opinion generally for early stabilisation of the dollar, he refused to leave the revival of trade and prices to the tender mercies of financial orthodoxy. And the markets, too, stood by the President. Except on Wednesday, when the dollar rose, and the rumours that France might abandon the gold standard upset the nerves of many traders, prices were consistently on the upward trend and trading touched far higher levels. On July 1, the turnover in the stock markets totalled 2.79 millions shares against 1.70 million on the previous Saturday. With the slump of the dollar to 4.35, wheat rose by 3½ cents and cotton was a shade higher. Car loading figures are intensely encouraging and the increase in the traffic and expectations of orders for equipment are helping the shares of other concerns to rise. On Monday the news of Mr. Roosevelt's reply to the stabilisation formula accepted by France, Great Britain and also Professor Moley reached the markets. Wheat gained 4⅜ cents., May futures reaching 107¾ ; and in Winnipeg the rise was even more, 107⅝. Cotton advanced 57½ points in Wall Street, rails showing somewhat spectacular rise ; the total trading came up to 6.7 million as compared with 3.7 million shares on the previous Friday. On Tuesday all the stock and commodities markets were closed in celebration of Independence Day. But it was expected that when the markets reopened the improvement in stock and commodity prices would be more than sustained. But on Wednesday, as has been pointed out earlier, the fears of the abandonment of gold standard by France were entertained in certain circles in the market and shares were found to lose many points in the morning. Turnover was distinctly less than on Monday. But within a day the clouds cleared and Wall Street had the satisfaction that the world conference would continue its deliberations in London and that, at the same time, France and the gold standard countries were determined to remain on gold without entering the lists for currency depreciation. The statements of President Roosevelt were rightly interpreted to mean that the administration had no intention of stabilising the dollar for some time to come at least. Shares were advancing all along the line with rails, steel, motors and oils in the vanguard. Prices improved by two to six points and trading again regained the level of Monday. Friday saw the turnover at an even higher level of 6.79 million against 6.24 million on Thursday.

Increase in Industrial Production.

The background of business conditions continues as encouraging as ever. The improvement in the rails may be judged from the fact that the Chesapeake and Ohio railways car loading figures are 32 per cent. above last year and the Railroad Credit Corporation has now repaid the 4 per cent. funds which were contributed by the larger rails from the increased freight charges in order to help the weaker lines. Loans borrowed from the Reconstruction Finance Corporation are also being repaid. The output of motors and trucks during June is estimated at 240,000 units which compares with 227,567 units in May and 100,218 units in June last year. It is believed that the cotton industry would have to take on one hundred thousand more men as a result of the reduction of hours to be enforced by the new code.

Sale to Russia on Credit.

It is significant that the cotton textile industry will be the first to have its code of fair competition in actual working. The outlook of cotton is distinctly brighter and the New York Stock Exchange estimates world consumption for May at 212,000 bales against 232,000 bales in April. The May figures are the largest of any month since January,1930. A development, the importance of which reaches beyond the cotton world, is the decision of the Reconstruction Finance Corporation to finance the sales to Russia of 60 to 80 thousand bales of cotton. Negotiations are afoot for a larger project of selling a thousand million yards of cotton goods for delivery over a eighteen months period on a long-term credit. But at present the price of raw cotton is not keeping pace with the price of other primary commodities ; for it is believed that, whatever rise in the price of cotton, the farmers would show more and more resistance to

Air Mail Week.

the attempts of the administration to bring about a reduction in acreage. But the Department of Agriculture is confident of putting through its programme of reduction with the Farm Relief Act as it is, all that is required for the success of the present scheme is determination on the part of the officials in charge.

Steel Goes Ahead.

The oil industry has enjoyed the somewhat incompatible advantages of increasing output and rising prices. Producers of cotton are refusing to sell under a definite level of prices and Cement companies have announced increase in prices and wages with immediate effect. The employers of the coal industry have abandoned the attempt to bring about a reduction in the wages; and it is suspected that before long the code of fair competition in the industry will have been drawn up. The steel industry has increased its activity by three per cent. during the week to 56 per cent. of capacity. The average daily production of pig-iron during June, according to *Steel* increased by 46 per cent. and the number of furnaces under blast by 28, making a total of 51 in the past three months. The production of pig-iron during May stands at 1,265,000 tons against 887,000 tons in April and with 90 furnaces in blast against 63. Employment increased by 5 per cent. during May and pay rolls by 9 per cent. There is no doubt that further improvement had taken place during June.

General Johnson's Fears.

While the plans of the administration are fully reflected in the improvement in trading and prices, General Johnson, the Administrator appointed under the Industrial Recovery Act, is uneasy about the lack of balance between the increase in production and the increase in wages. This, together with the speculative buying now in progress, it is feared, would cause a dangerous instability. The remedy for such a situation lies in the sincere discharge by industries of the duties laid upon them by the Industrial Recovery Act. In this respect, as also the enforcement of reduction of acreage, President Roosevelt is reported to be again taking an active personal interest. It is suspected that the President would again appeal to the farmers on the radio; and meanwhile, Mr. Richberg, the Counsel for the committee appointed to carry out the Industrial Recovery Act, has held out the unmistakable threat that, unless industries cooperate in the formulation and acceptance of the code of fair competition, the State would have to resume active political control over the affairs of the industries. When it was known that such an announcement had been made with the due authorisation of the President, the industries made vigorous efforts to satisfy the requirements of the Administration. The tyre industry and the oil industry are reported to have made considerable progress. The Department of Agriculture has completed its plans for the control of sugar, plans which involve quotas for each source of supply and an agreement on the part of the farmers not to purchase in excess of quotas.

In the field of finance, the important events are two consignments of gold to France, one of 5,810,200 dollars on June 5, and another of 5,996,600 dollars on June 6. Brokers' loans increased by 94 million dollars to 858 million dollars, the largest total known

since October 1931, which is a clear indication that the speculative tide is again on the flow.

GERMANY.

PROGRESS IN DEBT NEGOTIATIONS.

Germany bids fair, ere long, to be free from her debt problems, though not from her debts.

The recent agreement regarding the transfer of interest on loans provided for the payment of fifty per cent. of all interest, amounting, in the second half of 1933, to about 250-300 million marks. The non-transferred sums of interest are to be in the form of certificates of the conversion office, given to the creditors. But these certificates can be used as bearer securities, and for paying for additional exports. The creditors also have in the country "Register-marks"—that is, amounts arising from the "stand-still" accounts for foreigners which, under the last "standstill" agreement, were paid in to a non-interest bearing account in the Reichsbank, and could be used for additional exports. Similarly, German undertakings can accept their own foreign bonds instead of foreign currencies to a certain extent as payment for their exports. In other words, German undertakings have booked orders, and received payments, in advance. The discount of about 22 per cent. of the Register-mark and the assumed discount of 50 per cent. of the new scrip of the conversion office should tend to tempt the creditors to import German goods. Such operations should result in smaller sums accumulating in the conversion office than otherwise ; and it is easier to find investment opportunities for 100 or 150 million marks, safe and liquid, than for 600 or 700 million marks. While the creditors are thus offered an attractive proposition, the economic situation in Germany will be considerably eased.

But, the creditors are agitated over the German law of June 9, 1933 by which "sums due in foreign currency can be paid in Reichsmarks, thus leaving upon creditors the risk of exchange." The whole field of Reichsbank's proposals is to be, shortly, the subject of discussion between the Reichsbank and a small committee of the representatives of creditors such as Great Britain, Holland, Sweden, Switzerland and the United States of America. Mr. E. H. Lever, the representative of the British Committee is already in Berlin.

Economic Liberalism.

Under stress of economic strain in Nazi Germany, Ministers are displaced and their portfolios split. Even misfits are calculated to work smoothly. Where Herr Hugenburg held office, two new ministers—the Reich Minister of Economics and the Reich Minister for Food Supply—have been appointed. Dr. Kurt Schmitt, Director-General of the "Allianz", Germany's largest insurance company, has taken over the portfolio of the Reich Minister of Economics ; and Dr. Darre, that of the Reich Minister for Food Supply. Dr. Schmitt is an advocate of free private business, undisturbed by State interference ; and Dr. Darre is an extreme advocate of the protection of agricultural producers. But, both regard themselves, in their respective offices, as trustee of the capital market ; and neither lacks the energy to champion his convictions. The various agrarian moratoria so loosened the connection of agricultural credits with the rest of the country's economic life, that Dr. Schmitt can suffer his colleague carrying on a policy different from his own.

Even the two Secretaries of State of the Reich Minister of Economics represent divergent policies. Though not a free trader, Dr. Posse, formerly Ministerial Director of the Political-Commercial Department, has set his face against self-sufficiency. As the dominant negotiator of the Franco-German Commercial Treaty of 1927, he kept Germany's commercial relations with other countries unimpaired, especially in the face of agrarian elements clamouring for protective tariffs. The other Secretary of State in the Reich Ministry of Economics is Herr Gottfried Feder, the author of the Nazi Party's programme championing the "breaking of interest slavery". How much the colleagues have modified their views and what political foundation has secured this orientation of the Nazi economic policy towards Liberalism, only the future can divulge.

Budget Conundrums :

The budget for 1933-34 is not known in all its details. But the receipts from taxes are estimated to be some 400 million marks lower than last year. But, the amortisation of short-term debts is reduced from 420 to 100 million marks. States and municipalities are granted 200 to 300 million marks less. The resources will, however, be supplemented by special grants through Treasury certificates, taxation certificates, etc., the burdens of which will practically be borne in coming years. These certificates are earmarked for the financing of economic rehabilitation and the creating of employment. A recent estimate of the existing burdens from such expenditure was nearly two milliard marks.

Industrial Activity :

During the first half of this year, indications of economic improvement were rather pronounced, sustaining the note of hopefulness, sounded in the last

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

"It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

Write-to day stating date of birth, when full particulars will be sent to you, without obligation on your part.

OVER 86 YEARS' SERVICE IN INDIA

Standard Buildings, 32, Dalhousie Square, Calcutta.

Air Mail Week

report of the Reich-Kredit-Gesell-Schaft. Favourable reports from the industrial groups, in most cases the improvement exceeding that of last year, have begun to arrive in the Chambers of Commerce. The index of monthly iron output rose from 36.1 per cent. in January to 37.2 per cent. in May, and the index for steel during the same period from 39.9 per cent. to 47.5 per cent. Throughout the first five months, coal output was 700,000 to 1,000,000 tons above last year's figures, although the consumption in some months was lower than in 1932. The share index rose from 53 per cent. in January to 64 per cent. in April, from which figure it has since fallen to 60 per cent. But, at present, it is about 20 per cent. above last year's figure. The Bond market experienced a similar movement.

The Gelsenkirchen Bergwerksgesellschaft will hand over its coal mines to a company to be newly formed and will receive, in return, 70 million marks in the shares of the new company. Gelsenkirchen will also control the Vereingte Stahlwerke, the chief concern of the German iron industry, both directly and through companies in which it possesses interests.

During the first quarter of the year, the adverse trade balance had to be met from the gold and foreign exchange reserves of the Reichsbank, which decreased from Rm. 920,000,000 on December 31 to Rm. 274,000,000 on June 30.

FRANCE

INTERNATIONAL ORGANISATION OF PRODUCTION.

Now that the latest stabilisation formula, reached by gold standard countries, was thrown overboard by President Roosevelt, it intrigues one into a speculation of the interest of gold countries in the Economic Conference. France, for one, is absolutely unnerved by Pesident Roosevelt's rebuff. France has abiding faith in the old stability of the gold standard regime, coupled with the new necessity for international co-operation in its management. It is, therefore, France's determination, at all costs, to maintain the gold parity of the franc ; and she will not, therefore, weary in the insistence upon the immediate necessity for the stabilisation of currencies, generally. But, the immediate aim of France is to take vigorous interest in the economic side of the Conference's work. Efforts will be made to conclude an international agreement for an extension of the tariff truce. This step will involve the sacrifice of freedom to impose compensatory duties to offset any depreciation of foreign currencies against the franc. But, informed quarters think that the only safeguard, adequate enough to meet this contingency, is an agreement for the international organisation of production on the lines, suggested by the Economic Commission of the Conference. These proposed tariffs or restrictions truces could be effective, only when supervised and controlled by an organ, working under the auspices of the League of Nations. The main task of the proposed international organisation is the raising of world prices to an economic level, commensurate with costs and the scale of indebtedness. This problem would raise the question of the mitigation of restrictions and loosening of quotas. These problems are, no doubt, difficult to tackle in advance of stabilising the currencies of the world, in general. And yet, these are the only possible methods of transition. For, agricultural producers could be certain of a reasonable margin of profit, only when prices return to the levels ruling in 1928 or 1929. Then, and only then, the debtor countries of Europe, will see a chance to export their agricultural products. Not until this has happened, will the debtor countries lend ear to propositions of mitigating their import and exchange controls.

New French Loan.

The amount of the second portion of the French Treasury Loan is 2,000,000,000 francs at 4½ per cent. It will be remembered that the amount of the first portion was 5,200,000,000 francs, though the official announcement of issue had been for 3,000,000,000 francs. It is possible, therefore, that the issue of the present loan may exceed the announced figure, in view of the maturity of £30 millions London loan in November next. M. Georges Bonnet, the Minister of Finance, before returning to London, declared that the situation of the Treasury was satisfactory ; the revenue returns were fully up to estimates; and the normal liabilities of the Treasury were fully covered by resources. The Treasury has at present 1,500 million francs in hand, and will receive during July another 1,500 million francs, from the Caisse des Depots et Consignations representing reimbursement of advances from the State. The short-term loans in circulation are being renewed steadily. In June, they were 800 million francs. The new issue is a provision to cover Treasury charges during August, September and October, when expenditure is expected to exceed revenue by some 3,000 million francs. It is also proposed to repay half of the £30,000,000 six months' loan made to France by London Banks in April last.

Revenue Returns.

On the whole, the revenue returns for May point to an improved situation. The total yield from all normal and permanent sources was 2,629,788,000 francs, or 189,537,000 francs more than in May last year. Recoveries of direct taxation were 386 million francs against 203 million francs a year ago. The yield from indirect taxes and monopolies was 2,189 million francs, or only 17 million francs smaller than in the corresponding month. Considering the sharp disparity between 100 and 808 million francs a month during the past 18 months, the May figure of 17 million francs is the most satisfactory result achieved for a long period. The decline, as compared with Budget estimates, was mainly in the special tax on spirits and the duties on liquers, in motor car taxes, and in import duties. The turnover taxes, registrations, stamp duties and taxes on Bourse operations, motor spirit, petroleum and sugar produced appreciably more than in May last year. Although income-tax demands, levied during 1932, were less than those in 1931, the outstandings were more in current year than in the previous.

The Government seems to be taking concerted action for the purpose of supporting the "gold" countries. It authorised the State railway undertaking to pay off one-half of a loan of 20 million florins taken up in the Dutch market last February. It also authorised the French banks to open credits of 300 million francs in favour of Belgium. It was, moreover, able to bring down the rate of interest on short-term Treasury bonds by 1/8 per cent.

Legislative Enactments.

The Chambers have voted, among others, the Bills for fixing the minimum selling-price of wheat at 115 francs per quintal, and the rates for the milling of corn and reorganising the production and marketing of wheat. A bill for the reorganisation of wine industry was considered, and the quota system to Algerian wine imports was rejected by a large majority. The Railways Bill, and two Government Bills, one authorising the Ministry to impose by decree "exceptional and temporary" super-taxes on imports, and the other asking for other "full powers" to meet sudden currency developments abroad, prejudicial to French interest, were considered.

(Continued on page 191.)

STATISTICAL INFORMATION

Foreign Trade of Calcutta.

The improvement recorded in May in the overseas import trade of Calcutta in private merchandise was not maintained in June, the value receding from Rs. 2.86 crores to Rs. 2.47 crores against Rs. 2,76 crores in June, 1932. Exports however, advanced from Rs. 3.32 crores to Rs. 4.6 crores against Rs. 3.03 crores in June, 1932.

Imports.

A comparison of the values of the principal imports with the figures for June, 1932, is indicated below, the figures in brackets representing the increase or decrease as the case may be:—

	In lakhs of rupees.
Cotton goods	49 (−3)
Machinery and mill work	39 (+3)
Iron and steel	13 (−4)
Other metals	12 (+2)
Oils, mineral	8 (−11)
Hardware	8 (−2)
Chemicals and chemical preparations excluding chemical manures and medicines	7 (−2)
Electrical instruments	6 (−2)
Paper and pasteboard	6 (−3)
Provisions and oilman's stores ...	6 (+1)
Liquors	5 (level)
Sugar	4 (−5)
Rubber manufactures	3 (level)

The total yardage of cotton piecegoods decreased from 23 millions to 21 millions and the value receded from Rs. 37 lakhs to Rs. 27 lakhs. The heavy drop under oil was chiefly due to no importation of kerosene oil from America. The decrease in the importation of sugar, 23 Dutch Standard and above from Java accounted for the heavy fall under sugar.

Exports.

The variations in the values of the principal exports as compared with the trade in June, 1932, are shown below:—

	In lakhs of rupees.
Jute manufactures ...	187 (+29)
Jute, raw	100 (+67)
Hides and skins	32 (+21)
Tea	32 (+1)
Lac	14 (+6)
Grain, pulse and flour	10 (1−4)
Pig iron	8 (+3)
Manganese ore	3 (level)

All the prindipal commodities on the export side showed an improvement with the exception of grain, pulse and flour.

Direction of Exports.

Germany continued to be the chief buyer of raw jute and hides. The United Kingdom was the principal customer for tea. Manganese ore and pig iron went mostly to Japan. Gunny cloth, lac and skins were chiefly shipped to the United States of America. Gunny bags were shipped to the Commonwealth of Australia, the United Kingdom, the Union of South Africa and Nigeria. Rice which formed the bulk of the trade under the head "grain, pulse and flour" continued to be chiefly shipped to Mauritius.

FOREIGN TRADE OF MADRAS.

The total value of imports of principal articles from foreign countries into the Madras Presidency during the month of June, 1933, was Rs. 1,68,42,595 against Rs. 1,37,28,820 in the corresponding period last year showing a deficit of Rs. 28,86,225. The commodities that were responsible for the deficit were: Dyeing and tanning substances Rs. 1,25,908 (−Rs. 8,81,094); grain, pulse and flour 1,024 tons, Rs. 79,292 (−3,416 tons, −Rs. 3,10,538); brass wrought—mixed or yellow metal for sheathing 4,292 cwts., Rs. 1,22,225 (−11,697 cwts., −Rs. 3,87,968); iron and steel 2,924 tons, Rs. 5,07,370 (−2,701 tons, −Rs. 3,33,685); cotton twist and yarn 5,59,520 lb., Rs. 4,92,473 (−5,09,023 lb., −Rs. 4,87,579); cotton piecegoods grey (unbleached) 38,40,068 yds., Rs. 5,07,299 (−1,071,779 yds., −Rs. 1,77,421); cotton piecegoods white (bleached) 29,11,430 yds., Rs. 6,27,184 (−3,95,000 yds., −Rs. 64,237); silk raw 33,362 lb., Rs. 97,599 (−31,041 lb., −Rs. 1,98,335); other articles Rs. 57,30,417 (−Rs. 14,65,622).

The total value of exports of Indian produce and manufactures from the Madras Presidency to foreign countries was Rs. 2,24,48,633 against Rs. 1,82,34,567 in the corresponding period last year showing an increase of Rs. 42,14,066. The principal commodities that contributed to the increase were: Rice not in the husk 9,431 tons, Rs. 9,00,133 (+4,872 tons, +Rs. 2,71,503); castor seeds 3,455 tons, Rs. 4,38,309 (+2,905 tons, +Rs. 3,59,598); groundnut 42,369 tons, Rs. 53,59,112 (+34,197 tons, +Rs. 39,62,462); cotton raw 3,088 tons, Rs. 19,71,058 (+2,676 tons, +Rs. 16,93,258); tobacco (unmanufactured) 36,56,508 lb., Rs. 10,89,891 (+20,69,041 lb., +Rs. 4,19,627); other articles Rs. 52,56,271 (+Rs. 42, 14, 066).

FOREIGN TRADE OF BURMA.

The report on the principal variations in the foreign trade of the Province of Burma during the month of June, 1933, as compared with the corresponding period of 1932 shows:—

The combined value of Imports and Exports was Rs. 233.81 lakhs as against Rs. 295.73, showing a decrease of Rs. 61.92 lakhs.

Imports.

The total value of merchandis e decreased from Rs. 116.00 lakhs to Rs. 66.96 lakhs. The following were the principal articles which showed decreases, the value and the amount of decrease being noted against each:—

	Value. Rs. lakhs.	Decrease. Rs. lakhs.
Provisions and Oilman's stores—		
Milk, condensed and preserved	2.68	1.53
Textiles—		
Cotton Twist and Yarn ...	0.68	1.81
Manufactures—Hosiery—		
Underwear	0.57	1.41
Piecegoods—		
White	4.72	10.76
Coloured	7.30	12.67
Haberdashery and Millinery—		
Towels not in the piece ...	0.36	1.13

There were no imports of "parts of ships" during the month under report while in the previous June, imports recorded under this head were valued Rs. 7.67 lakhs.

Oil crushing and refining machinery to the value of Rs. 2.41 lakhs was imported during the month as against Rs. 0.63 lakhs recorded in the corresponding period of last year.

Exports.

The total value of Indian merchandise recorded during the month was Rs. 166.84 lakhs as against Rs. 179.73 lakhs, showing a decrease of Rs. 12.89 lakhs. The following articles accounted for the decrease, the value and the amount of decrease, being noted against each:—

	Value. Rs. lakhs.	Increase. Rs. lakhs.
Fodder, bran and pollard—		
Rice bran	2.30	2.29
Grain, pulse and flour—		
Rice not in the husk ...	112.15	16.49
Metal and Ores—		
Pig, lead	7.94	3.15

Increases were, however, noticed in the following articles, the value and the amount of increase being noted against each:—

	Value. Rs. lakhs.	Decrease. Rs. lakhs.
Metal and Ores—		
Tin Ore	3.00	1.38
Paraffin Wax	15.55	6.71

TRADE OF GREAT BRITAIN.

Trade returns of Great Britain for June show that the value of imports decreased by £170,533 and exports decreased by £1,237,765. For the past six months imports were £320,368,731, a decrease of £40,488,875 and exports £175,289,757, a decrease of £11,743,079.

P. O. CASH CERTIFICATES.

During the month of June, 1933, Rs. 81,76,000 approximately were realized by the sale of 5-year Post Office Cash Certificates, as against Rs. 1,40,20,000 in June, 1932 and Rs. 1,52,89,000 in June, 1931.

COMPANY REPORTS

THE BANK OF INDIA LTD.

The transactions of the past six months have resulted in a profit of Rs. 7,32,439-8-3 from which sum has to be deducted Rs. 70,000 for Income Tax and Super Tax, leaving a net profit of Rs. 6,62,439-8-3 for the half year ended 30th June, 1933. To this amount has to be added Rs. 3,40,864-3-1 brought forward from the last account, making a total of Rs. 10,03,303-11-4.

This sum the Directors have disposed of as follows :— In payment of an ad-interim dividend at the rate of ten per cent. per annum (Rs. 2/8/- per share) free of Income Tax on the Paid Up Capital of Rupees One Crore for the half-year ended 30th June, 1933, which will absorb Rs. 5,00,000; carried forward to the next account Rs. 5,03,303-11-4.

THE STATE-AIDED BANK OF TRAVANCORE, LTD.

The Net Profit of the State-Aided Bank of Travancore, Ltd., for the half-year ended 30th June, 1933 is Rs. 42,675-15-1 (Rupees Forty-two thousand six hundred and seventy-five, fifteen annas and one pie) only.

UPPER GANGES VALLEY ELECTRICITY SUPPLY COMPANY, LIMITED.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	5,99,000	Block (nett) ...	5,82,731

		Other Items ...	29,009
Total ...	7,16,232	Total ...	7,16,232

Extracts from Directors' Report:

The Directors have pleasure in submitting the Audited Accounts for the Half-year ended 31st December, 1932.

Mains.—Extensions of Mains have been carried out in Nehtaur, Kundarki and Moradabad.

General.—Although the conditions in respect of the depression in Agriculture and Trade in the District have shewn little signs of improvement there has been steady increase in the number of consumers and in the number of units sold.

The total capacity of Motors connected to the System at 31st December, 1932, was 1,304 h.p. as against 1,043 h.p. at 30th June, 1932, and the number of street lamps was increased from 1,394 to 1,461.

The following statement shows the progress of the Undertaking :—

Half-year ended	No. of Connections	No. of Units sold	Revenue Rs.
30th June, 1931 ...	664	370,077	72,955
31st December, 1931	933	501,740	92,440
30th June, 1932 ...	1,164	606,966	1,10,858
31st December, 1932	1,443	704,095	1,19,916

Directors.—Mr. S. D. Gladstone has gone on home-leave for six months and Mr. W. Hunter of Messrs. Gillanders, Arbuthnot & Co. has been appointed an Alternate Director in his place.

Mr. W. Hunter retires in rotation, but being eligible offers himself for re-election.

Auditors.—Messrs. Lovelock & Lewes retire, but being eligible offer themselves for re-appointment.

Solicitors.—Messrs. Morgan & Co., the Solicitors to the Company are now working under the name and title of Messrs. Sandersons & Morgans. This firm has been appointed Solicitors to the Company.

Accounts.—After providing for all charges including Rs. 9,284-0-11 on account of Depreciation and writing off Rs. 4,000 against Preliminary Expenses, Interest on Capital during Construction and Brokerage on placing shares, a balance of Rs. 9,648-15-2 including Rs. 6,532-14-11 brought forward from the previous half-year remains to be carried forward to next half-year's accounts.

Owing to their inability to attend the Directors' Meeting Rai Bahadur M. C. Bijawat, I.S.E. and Mr. Leslie Martin did not sign the accounts. By Order of the Board, Martin & Co., Managing Agents, 12, Mission Row, Calcutta, 30th June, 1933.

THE CENTRAL BANK OF INDIA, LTD.

The Net Profit of the Central Bank of India, Ltd., for the half-year ended 30th June, 1933, subject to audit including the sum of Rs. 3,56,027-6-3 brought forward from last year's account amounted to Rs. 11,86,145-3-10, which the Directors resolved to dispose of as follows: to pay an ad-interim dividend at the rate of 6 per cent. per annum (free of Income-tax) for the half-year ended 30th June, 1933, Rs. 5,04,396-0-0; to carry forward to next half-year's account Rs. 6,81,145-3-10.

UPPER JUMNA VALLEY ELECTRICITY SUPPLY COMPANY, LIMITED.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.

		Other Items ...	36,536
Total ...	6,97,546	Total ...	6,97,546

Extracts from Directors' Report:

The Directors have pleasure in submitting the Audited Accounts for the Half-year ended 31st December, 1932.

Mains.—Extensions of Mains have been carried out in Hapur and Ghaziabad.

General.—Despite the lack of improvement in conditions of trade and agriculture in the District, steady increases in the number of consumers and the number of units have been maintained.

The following statement shows the progress of the undertaking :—

Half-year ended	No. of Connections	No. of Units sold	Revenue Rs.
31st December, 1930 ...	150	62,996	28,748
30th June, 1931 ...	294	161,265	54,889
31st December, 1931 ...	437	252,668	62,287
30th June, 1932 ...	492	393,391	70,321
31st December, 1932 ...	656	435,529	67,477

Directors.—Mr. S. D. Gladstone has gone on home-leave for six months and Mr. W. Hunter of Messrs. Gillanders, Arbuthnot & Co. has been appointed an Alternate Director in his place.

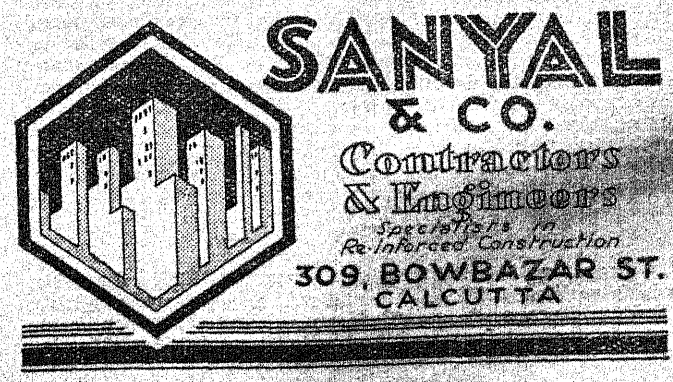
Mr. W. Hunter retires in rotation, but being eligible offers himself for re-election.

Auditors.—Messrs. Lovelock & Lewes retire, but being eligible offer themselves for re-appointment.

Solicitors.—Messrs. Morgan & Co., the Solicitors to the Company, are now working under the name and title of Messrs. Sandersons & Morgans. The firm has been appointed Solicitors to the Company.

Accounts.—After transferring to Development Account all the relative expenses up to the end of this half-year and providing for all charges including Rs. 6,705-15-2 on account of Depreciation and writing off Rs. 18,858 against Development Account a balance of Rs. 5,759-10-8 remains to be carried forward to the next half-year's accounts.

Owing to their inability to attend the Directors' Meeting Rai Bahadur M. C. Bijawat, I.S.E. and Mr. Leslie Martin did not sign the accounts. By Order of the Board, Martin & Co., Managing Agents, 12, Mission Row, Calcutta, 30th June, 1933.



SAUGOR ELECTRICITY SUPPLY COMPANY, LIMITED.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	47,940	Block (nett) ...	2,02,216
Deposits ...	4,589	Preliminary Exps.	12,434
Loans ...	2,15,000	Stocks, etc. ...	7,660
Sundry creditors ...	6,480	Debts ...	3,872
		Cash and other balances ...	3,135
		Balance of Profit and Loss A/c. ...	44,692
Total ...	2,74,009	Total ...	2,74,009

Extracts from Directors' Report:

The Directors beg to submit the Audited Accounts for the Half-year ended 31st December, 1932.

Plant.—The Plant has run satisfactorily during the Half-year and is maintained in good condition.

Mains.—No extensions have been made during the Half-year.

General.—Trade and Agricultural depression have had an adverse effect, the Company is still passing through the Development period, the following shows the increase in the Company's operations:—

Half-year ended	Number of Consumers	Units Consumption
31st December, 1931 ...	145	22,811
30th June, 1932 ...	176	31,598
31st December, 1932 ...	186	47,273

The Government of Central Provinces is now considering the installation of electricity in its buildings and it is hoped that this will be done next year.

Directors.—Mr. A. E. Mitchell retires in rotation, but being eligible offers himself for re-election.

Mr. S. D. Gladstone has gone on home-leave for six months and Mr. W. Hunter of Messrs. Gillanders, Arbuthnot & Co., has been appointed an Alternate Director in his place.

Auditors.—Messrs. Lovelock & Lewes retire, but being eligible offer themselves for re-appointment.

Solicitors.—Messrs. Morgan & Co., the Solicitors to the Company, are now working under the name and tiltle of Messrs. Sandersons & Morgans. This firm has been appointed Solicitors to the Company.

Accounts.—After providing for all charges including Rs. 6,165-14-9 on account of Depreciation, the half-year's working resulted in a debit balance of Rs. 10,859-14-11 to which has been added Rs. 33,831-15-4 brought forward from the previous half-year making a total of Rs. 44,691-14-3 to be carried forward to the next half-year's accounts.

Owing to his inability to attend the Directors' Meeting Mr. Leslie Martin did not sign the accounts. By Order of the Board, Martain & Co., Managing Agents, 12, Mission Row, Calcutta, 30th June, 1933.

BELVEDERE JUTE MILLS COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets	Rs.
Capital ...	21,00,000	Block (nett) ...	30,06,281
Reserves ...	21,24,780	Stores ...	1,77,868
Loans ...	2,23,383	Stocks ...	15,88,059
Unpaid dividends	20,380	Outstandings ...	51,755
Debts ...	4,13,243	Advances ...	21,114
Profit ...	1,36,291	Investments ...	1,52,620
		Cash balance ...	20,380
Total Rs. ...	50,18,077	Total Rs. ...	50,18,077

Extracts from Directors' Report:

The accounts of the half-year ended June 30, 1933, show a nett profit of Rs. 90,916. After transferring Rs. 25,000 from equalisation of dividend reserve and making sundry adjustments, there is a balance at credit of profit and loss account of Rs. 1,36,290. The directors recommend dividends on preference shares at Rs. 3-8 per share, Rs. 24,500; and on ordinary shares at Rs. 7-8 per share, Rs. 1,05,000; the balance Rs. 6,790 to be carried forward. In accordance with the agreement of the Indian Jute Mills Association the mills have worked forty hours per week with 15 per cent. of the total looms silent.

DERBY TEA CO., LD.

Crop for 1932, 734,816 lb., against 772,752 lb. for 1931, which realized 6.58d. a lb. in London. Net profit, £2,246; dividend proposed on Ordinary shares, 2½ per cent; balance forward increased from £9,693 to £10,514. Meeting 5th July.

METAL BOX CO., LD.

The accounts for the year ended 31st March show that the estimate of profits given in the prospectus of April, 1932, has been exceeded. Net profits rose from £89,430 for 1931-32 to £134,079. The issue of Debenture stock and Proference shares last year enabled the Company to discharge its indebtedness to its bankers, to repay secured liabilities of certain subsidiaries, and to provide working capital. The share premiums account has been set against the costs of these transactions, and the balance of these cost, amounting to £6,313, together with the discount on the Debenture issue, amounting to £24,000, are now to be written off out of profits. In addition the general reserve receives £10,000. raising it to £120,000, and it is proposed to pay a final dividend of 5 per cent. on the Ordinary shares, making 3½ per cent. for the year (against 7½ per cent.), the balance forward being increased from £4,862 to £6,112.

During the year, states the report, the Company has completed its programme of capital expenditure in relation to the production of fruit and vegetable cans. Despite the rapid expansion of this section of the business, however, the widely based general line trade still represents about 80 per cent. of the Company's turnover. A subsidiary has been formed and is already in operation in Calcutta and a further subsidiary is being formed in Sounth Africa.

TJIWANGIE TEA ESTATES LD.

The tea crop for the year ended 31st March amounted to 1,645,530 lb. (against 1,684,535 lb. for 1931-32). While total cost were reduced from 7.03d. to 5.66d. a lb., the net selling price showed a greater fall from 8.72d. to 5.45d. a lb. The amount of cinchona bark sold was 136,384 lb. (against 168,196 lb.), on which there was a net profit per lb. of 4.98d. (against 4.93d.). The Java accounts show a profit, after depreciation, of £999 (against £13,765). Tranferring this amount to London, taking credit for interest, profit of £3,050 on sale of investments, etc., and debiting debenture interest, etc., there remains a net profit of £3,236 (against £12,918). It is again proposed to pay a dividend of 4 per cent., requiring £3,200, leaving the balance forward little changed at £10,270.

BARAOORA (SYLHET) TEA CO., LD.

Profit for 1932, £13,371 (against £1,525) to which has been added £1,500 transferred from income-tax account and £6,082 brought forward (after adjustment). A dividend of 5 per cent. is recommended on the Ordinary shares (against 2 per cent.), and £84 is to be added to the provident fund, leaving £10,119. The crop harvested amounted to 3,101,878 lb. (against 2,122,003 lb.).

GENERAL ELECTRIC CO., LD.

The accounts for the 12 months ended 31st March show that gross profits fell by £44,918, but that net profits, thanks chiefly to a saving in debenture interest, declined by only £8,383. In veew of the very difficult conditions prevailing at home and abroad. Results for the past three years are summarized below:—

	Year to 31st March.		
	1933.	1932.	1931.
	£	£	£...
Gross profit ...	1,012,739	1,057,657	1,122,007
Debenture interest ...	171,927	204,661	209,444
Depreciation ...	233,291	236,953	241,676
Net profit ...	603,165	611,548	666,312
Brought forward ...	420,136	400,880	379,165
Available	1,023,301	1,012,428	1,045,477
Preference dividends	252,000	252,000	252,000
Ordinary dividend ...	180,292 (8%)	180,292 (8%)	225,363 (10%)§
To reserve ...	137,750	130,000	132,928
To pension fund ...	32,014	30,000	34,311
Carried forward ...	421,245	420,136	400,880

After allowing for the Preference dividends the earnings represent 15 per cent. on the Ordinary shares, but the directors are pursuing the prudent course of maintaining the dividend at 8 per cent. and adding a sum to reserve sufficient, after writing off the expenses ofthe recent debenture issue, to bring that account up to £1,500,000. An exceedingly liquid position is shown by the balance-sheet. Floating assets, exclusive of accounts with subsidiary and associated companies and of cash held for redemption of outstandings Five per Cent. Mortgage Debenture stock, amount to no less than £5,895,282, against which the current liabilities stand at only £1,894,871, including the dividend.

LEDO TEA COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets	Rs.
Capital ...	6,50,000	Block (nett) ...	5,50,000
Reserves ...	2,75,000	Stores ...	14,615
Unpaid dividends	250	Tea sales receivable	1,31,669
Debts ...	9,128	Advances ...	5,486
Profit ...	32,032	Investments ...	99,816
		Cash balance ...	1,64,524
Total Rs. ...	9,66,410	Total Rs. ...	9,66,410

Extracts from Directors' Report:

The accounts for the year ended December 31, 1932. The result of the season's working is a nett profit of Rs. 10,502 which has been transferred to profit and loss account. After sundry adjustments there is a balance at credit of profit and loss account of Rs. 32,032. They propose to pay a dividend of 2½ per cent. and to carry forward Rs. 15,782. (During the year 16,56 acres of new planting was accomplished at Ledo, bringing the present area to 666.85 acres, while at Nagrijuli the total area remains at 364.08 acres. Estimates for 1933 have again been complied on strictly economical lines and provide for a total crop of 8,400 maunds for an outlay of Rs. 2,30,613 including inland freight and sale charges.

UPPER SIND LIGHT RAILWAYS, JACOBABAD-KUSHMORE FEEDER.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	22,00,000	Block (nett) ...	22,49,480
Reserves ...	2,49,000	General Charges	92,334
Unpaid dividends ...	3,123	Outstandings ...	47,294
Debts ...	1,706	Interest ...	74,385
Profit ...	63,352	Preliminary expenses	24,915
		Cash and other balances ...	28,778
Total Rs. ...	25,17,181	Total Rs. ...	25,17,181

Extracts from Directors' Report:

The accounts for the year ended March 31, 1933, show that the gross earnings from traffic, excluding rebate, amount to Rs. 1,62,823. The area under cultivation in the district served by the feeder was slightly less than in the previous year, while a shortage of water was felt in the belt irrigated by the Desert Canal. In all other respects, however, conditions were comparatively normal as no calamities in the form of floods, locusts, etc., occurred to cause damage to the crops. This situation is reflected in the goods earnings which show an increase of Rs. 5,070 over last year's figures despite the continued decline in crop prices. The zamindars are in a bad way financially and although government have come to their aid in the form of kharif remissions, the fall in prices tends to dishearten them. A shortage of money naturally restricts travel, and the drop in passenger earnings can therefore be attributed to this cause and to the road competition. Up to the first nine months of the year the passenger earnings were not unsatisfactory, but unfortunately a decline set in during the last three months which caused them to fall to a figure of Rs. 1,681 below last year's. Since the close of the year under review, however, both passenger and goods traffic have been very promising and it is hoped that the total earnings next year will show an appreciable increase over 1932-33. The amount at credit of the profit and loss account is Rs. 63,352, out of which the directors recommend the payment of a final dividend of 2½ per cent., free of income-tax, making a total of 4½ per cent. free of tax for the year, absorbing Rs. 55,000; and carrying forward Rs. 8,352.

SIAMESE TIN SYNDICATE.

The report of the Siamese Tin Syndicate, Limited, for the year ended December 31, 1932, has been issued. The accounts show a nett profit of £10,726 and a total to credit of £22,634. The directors recommend a dividend of 10 per cent. absorbing £15,000. The balance to be carried forward is £7,634.

ISA BHEEL TEA CO., LD.

The crop for 1932, was 1,054,551 lb. (against 912,171 lb. for 1931). There was a warking profit of £6,357 (against a loss of £3,160), and after crediting interest receipts etc., and meeting sundry charges it is proposed to pay the outstanding Preference dividend for the years 1930, 1931 and 1932, absorbing £1,350. A credit balance of £2,584 is carried forward (against a debit of £3,028 brought in).

NEW CENTRAL JUTE MILLS COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets	Rs.
Capital ...	24,50,000	Block (nett) ...	18,81,897
Reserves ...	20,91,961	Stores ...	1,44,689
Loans	2,13,757	Stocks ...	13,47,666
Unpaid dividends ...	5,287	Outstandings ...	28,156
Debts	7,05,083	Advances ...	17,731
Profit	1,32,117	Investments ...	21,72,729
		Cash balance ...	5,287
Total ...	55,98,205	Total Rs. ...	55,98,205

Extracts from Directors' Report:

The accounts of the half-year ended June 30, show a nett profit of Rs. 78,282. After transferring Rs. 50,000 from dividend equalisation reserve and making sundry adjustments, there is a balance at credit of profit and loss account of Rs. 1,32,117. The directors recommend dividends on preference shares at Rs. 3-8 per share, Rs. 49,000; and on ordinary shares at Rs. 7-8 per share, Rs. 78,750; the balance Rs. 4,367 to be carried forward. A profit of Rs. 1,35,631 was realised by the sale of government securities and this amount has been utilised to write down the price of jute stocks.

LONGVIEW TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	3,44,000	Block	4,00,000
Debeutures ...	1,00,000	Crop A/c. ...	1,10,474
Reserves ...	56,000	Stores	13,020
Other debts ...	52,269	Outstandings ...	8,864
		Cash	234
		Profit & Loss ...	19,677
Total ...	5,52,269	Total ...	5,52,269

Extracts from Directors' Report:

The results of the year's working are recorded Profit as per Revenue Account, Rs. 6,499-11, Garden Staff Commission amounts to Rs. 649-15-6, Debenture Interest amounts to Rs. 7,000, total Rs. 7,649-15-6, resulting in a net loss of Rs. 1,150-4-6, to which has to be added Debit Balance from Season 1931, Rs. 18,526-8-8, leaving to be carried forward to Season 1933, a Debit Balance of Rs. 19,676-13-2.

Crop.—Comparative details of outturn and average gross sale prices during the last four years are shown hereunder:—

Season.	Corp. lb.	Average Gross Price per lb. As. P.
1929	360,271	13 4
1930	246,555	13 9
1931	333,885	8 9
1932	370,900	8 10

The slight improvement on last season's average price is gratifying and justifies the policy adopted of holding back sales in anticipation of an improved market late in the season, which duly materialised.

Area.—The total area of the Company's property remains as before, *viz.*, 3,486 acres, of which the area under Tea 653,12 acres.

Estimate for Season 1933.—A crop of 280,000 lb. is provided for in the current year at the following cost:—Garden Expenditure, Rs. 89,450 at 5.11 annas per lb. Calcutta Expenditure, Rs. 64,000 at 3.65 annas per lb.

BARNAGORE JUTE FACTORY CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets,	Rs.
Capital ...	4,75,000	Block (net) ...	32,8,560
Reserve ...	3,32,176	Jute, Cloth, etc. ...	4,02,559
Debts ...	1,85,683	Outstandings ...	12,468
Profit & Loss ...	22,349	Cash & Invests. ...	2,28,621
Total ...	9,72,208	Total ...	9,72,208

Extracts from Directors' Report:

The balance available for appropriation, as shown in the Profit and Loss Account, amounts to £94,348-13-3.

It is proposed to appropriate this as follows:—Dividend for the year of 5 per cent. on the Preference Shares £10,000, 2½ per cent. paid 14th December, £5,000, 2½ per cent. payable 28th June, £5,000, Dividend for the year of 5 per cent. on Ordinary Shares payable 28th June, £13,750, carry forward £10,598-12-3, total £94,348-13-3.

Jute Stocks.—The stock is valued "at or under cost but over market replacement value" as shown in the Audited Accounts received from Calcutta. In the opinion of the Board any contingent loss is amply covered by the Company's Reserves.

MOHEEMA, LIMITED.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	8,00,000	Block (nett) ...	8,00,000
Reserves ...	1,35,000	Stores	16,663
Unpaid divdends ...	495	Tea sales receivable	76,320
Debts	37,952	Advances ...	2,292
Profit	13,493	Investments ...	91,170
		Cash balance ...	495
Total Rs. ...	9,86,940	Total Rs. ...	9,86,940

Extracts from Directors' Report:

The accounts for the year ended December 31, 1932, showing a deficit of Rs. 8,551 on the season's working. On transfer of the above to profit and loss, and after sundry adjustments, and the appropriation of Rs. 25,000 from reserve fund, there is a credit balance of Rs. 23,093. Dividends on preference shares were paid on November 1 and May 1 last, leaving a balance of Rs. 3,893 which the directors propose to carry forward. Crop weighed out at 4,360 maunds compared with 4,201 maunds in 1931. The average selling price was 6 annas per pound, compared with 7 annas 5 pies for the previous year. Planted area has been reduced to 668,59 acres by the temporary abandonment of 19.53 acres. Estimates for 1933 provided for a crop of 4,500 maunds for an outlay of Rs. 1,45,226 including inland freight and sale charges.

LUNGLA (SYLHET) TEA CO., LD.

The crop in 1932 was higher than in 1931, by 459,542 lb. at 2,943,188 lb. The average realization price fell from 6.64d. to 6.61d. a lb., but therce was a decline in costs from 7.50d. to 6.01d. a lb. Thus there was a working profit of £5,106, against a loss of £12,172; this however, is converted into a net loss of £3,932 after charging Debenture interest and depreciation (against a net loss of £17,548), and the accumulated debit to go forward is increased to £53,657. The Preference dividend is in arrear as from 1st January, 1929.

HALEM TEA CO., LD.

The Revenue Account shows a profit of £6,975-10-5, adding the Balance brought from Season 1931, £984-6-5, adjustment, Season 1931, £49-17-8, and Refund of Income Tax £205-9-10, gives a total of £8,215-4-4, from which has to be deducted:—Garden Manager's, etc., Commission £504-19-10 leaving a Balance of £7,710-4-6, out of which we recommend:—To write off Block Account £887-15-2 to transfer to Reserve Account £4,000, and the payment of a Dividend at 2½ per cent. for the year £1,875, total £6,762-15-2, leaving to be carried forward £947-9-4.

Season, 1932.—Weather conditions were favourable, and crop as a result shows an increase of 100,800 lb. over that of the 1931 season. In spite of adverse market conditions the prices realised compare favourably with those of the previous season, due to a general improvement in the quality of our teas. Although crop has increased, the expenditure shows a substantial saving, and it is satisfactory in present adverse circumstances to show a profit of £6,975-10-5 on the year's working.

Area under Cultivation is 1,827 acres.

Yield.—As compared with previous years, was as follows:—

	lb.
1932	1,218,880
1931	1,118,080
1930	1,103,945

SOUTHERN INDIA TEA ESTATES CO., LD.

Loss for the year to 28th February, £2,248 (against a profit of £55 for 1931-32). After crediting £1,617 previously written off local transport account in India, now recovered, £1,006 transferred from income-tax reserve, and £290 brought forward, £665 is available for distribution. The Preference dividends absorb £488, and the balance of £227 is to be carried forward. A crop of 1,165,198 lb. was harvested during the year (against 1,02,587 lb.). The f.o.b. cost per lb. was 6.26d. (against 7.44d.), and the net average price realized per lb. was 6.08d. (against 7.98d.).

KUKICHERRA TEA CO., LD.

Profit for 1932, after placing £500 to taxation reserve, £2,435 (against a loss of £1,747 for 1931). The Preference dividend has been paid, but again no distribution is recommended on the Ordinary shares. A credit balance of £1,644 is carried forward (against £335 brought into the accounts). Floating assets, £33,453; current liabilities, £3,169. A crop of 867,908 lb. was harvested during the year (against 802,927 lb.).

BRITISH INDIAN TEA CO., LD.

Profit for 1932, £6,603 (against £2,648 for 1931). A dividend of 6 per cent. is to be paid on the Ordinary shares (against 4 per cent.), and £18,398 is to be carried forward (against £17,729 brought into the accounts). Floating assets, £138,835; current liabilities, £8,063. The crop harvested during the year amounted to 1,409,075 lb. (against 1,163,246 lb.), and the average sale price, adjusting all sales to a London auction basis, was equal to 8,57d. per lb. (against 10.57d.).

INDIAN STANDARD WAGON COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	29,44,875	Block (nett) ...	32,22,595
Reserves ...	7,69,825	Stores ...	2,58,513
Advances ...	3,758	Outstandings ...	53,910
Unpaid dividends	9,845	Work in progress	62,973
Debts ...	2,90,373	Investments ...	1,49,031
Profit ...	2,31,200	Cash balance ...	4,98,854
Total Rs. ...	42,45,876	Total Rs. ...	42,45,976

Extracts from Directors' Report:

The accounts of the company for the year ended March 31, 1933, show a profit after allowing for depreciation of Rs. 99,319, to which has to be added the credit balance from last, year, Rs. 1,38,033, total Rs. 2,37,352. Out of this sum the directors have reserved for provident institution contribution, Rs. 6,152, leaving a balance of Rs. 2,31,200. They propose to deal with the balance as follows:—To pay the dividend due on the preference shares for the year ended March 31, 1933, amounting to Rs. 1,37,655; to pay a dividend of 5 per cent. on the ordinary shares, Rs. 48,719; to carry forward Rs. 44,826. The 5 per cent. dividend on the ordinary shares which the directors now propose to pay represents a return of 1¼ per cent. only to the original subscribers of the ordinary capital. It will be noted the dividends they propose to declare are at the expense of the carry forward which amount will now be substantially reduced and it will also be noted that the profit includes unadjusted credits and reserves brought in from previous years and now no longer required. The works were on restricted output throughout the year. Orders for 700 standard and 400 metre gauge wagons have been received for delivery during the current year. The workers will again be on reduced output but it is anticipated that the results will show an improvement over the year under review.

COORLA SPINNING & WEAVING CO., LD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	13,00,000	Block	25,85,106
Reserves ...	21,48,724	Stock-in-trade ...	21,85,001
Debts ...	14,87,148	Stores and Spares	68,901
		Outstandings ...	87,685
		Cash	7,108
		Profit and Loss ...	1,02,121
Total ...	49,35,872	Total ...	49,35,872

Extracts from Directors' Report:

Accounts for the year ended 31st March, 1933, shows a loss of Rs. 1,02,260-5-2. Deducting from that amount the sum of Rs. 139-4-8 brought forward from the last account, the net amount standing to the debit of the Profit and Loss account will be Rs. 1,02,121-0-6. The loss is chiefly attributable to the abnormal trade depression and the unremunerative prices obtained for cloth and yarn due to severe foreign competition. It is however hoped that with the help of the recently imposed additional duties and the cut in wages which our workmen have accepted, there will be a gradual improvement in the condition of our indu stry.

The Mill Buildings and Machinery are insured for Rs. 25,84,400 and the total Stock and Stock-in-process for Rs. 27,19,700. Also the Standing Charges have been insured for Rs. 50,000.—

WORLD OF INDIAN FINANCE

Friday, July 28.

Money was practically unlendable. ½ per cent. continues to be the nominal rate for interbank credits. At this rate, lenders are plentiful and borrowers are practically non-existent. As is to be expected in such a condition of the money market, the applications on Treasury Bills tender day were on the large side, being no less than Rs. 3.62 crores. Tenders at Rs. 99-12 were allotted approximately 52 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores. The average rate of accepted tenders was Rs. 1 per cent. per annum, which compares with Rs. 1-1-6 a week ago, Rs. 1-2 a fortnight ago, and Rs. 1-2-11 three weeks ago. An average discount of 1 per cent., secured this week, must be considered as the lowest rate on record for the short-term accommodation of the Government of India. As anticipated in these columns last week, the ways and means advance availed of by the Treasury from the Imperial Bank (which stood at Rs. 3 crores on July 14) has been liquidated in full. Nevertheless, Public Deposits show an increase of nearly Rs. 1¼ crores. The cash balance of the Imperial Bank also shows a rise of nearly Rs. 3 crores. All these are convincing tokens of the exceptionally easy conditions prevailing in the money market.

As the weekly sale of Treasury Bills is now confined to the quota of Rs. 1½ crores available on the tender day, there is no possibility of any change in the current phase of money. The Government should be able to sell three months Bills at rates as competitive as in the present week. Their ways and means problems would be more or less simple and smooth. It is quite possible that recourse to the Imperial Bank may be necessary in August ; but the Imperial Bank is in a position to make substantial advances without any inconvenience. On the other hand, the Bank would be only too glad to make such a remunerative employment of its idle funds. The Bank's cash balance stands at over Rs. 25 crores. Another reason why there should be no particular embarrassment in the ways and means adjustments is that owing to easier money, exchange also has been a shade quieter ; and that the sterling tenders are tending to fall short of the amount on offer. This means that the rupee payments that the Government have to make against their sterling purchases should be a lesser strain than heretofore. There can be no doubt that the Controller of the Currency has an absolutely complete grip over the monetary situation. The Secretary of State is provided with ample resources. The remittance programme up-to-date has worked extremely well. The ways and means machinery in India is functioning in the smoothest fashion. After a slight rise in discounts, the Treasury Bills are now being sold at rates more favourable to the Government. This in its turn is a propitious factor for the giltedge market.

In addition to this important influence, giltedge prices have advanced as a result of the substantial *bonafide* investment enquiry that was manifest in the past three weeks. The funds released from the loans redeemed in this financial year were, for a time, hesitant whether or not they should flow back into government securities market. The alternatives before the owners of such released funds were to get practically nothing if they kept the monies uninvested or to be prepared for a risk on capital depreciation, if they employed their funds in government securities. The first alternative meant a definite and assured loss. The second alternative meant only a problematic risk. It is true that from the experience of the past three months, giltedge was not exactly a security free from anxiety or concern. But the decline that had taken place was so great that any further retrogression would be only of the smallest dimension. Thus, the risk was of a strictly restricted nature. On the other hand, with the emphasising and acceleration of easy money, a rise in government securities was almost inevitable. If, at the psychological moment, the owners of the funds released from the redeemed loans should enter the market, the advance in prices would assume rapid strides. Moreover, Rs. 9 crores is to come into the market in mid-August on account of the repayment of 1933-36 bonds and another Rs. 4 crores against the 5 per cent. 1933 bonds. However hesitant the attitude of investors might be, the pressure of idle funds of this magnitude could not fail to cause an appreciation in giltedge values. In other words, the only cause for apprehension was the ugly nightmare of the giltedge developments in May and June. On the contrary, there were quite a number of circumstances which justified the hope that there was practically a complete elimination of all risks. It could thus be seen that of the two alternatives open to those who found

themselves embarassed with idle funds on their hands, the apprehensions of loss through capital depreciation were gradually disappearing. And so it came to pass that, little by little, the funds released from the loans began to trickle back into the giltedge market. Genuine investment has always a direct and substantial effect on the prices of government securities. And as prices gathered strength, those who were yet undecided gave up their hesitancy and plunged in, lest they should have to pay increasingly unfavourable rates.

It might be said that the recovery in giltedge prices in July has been almost as striking and sharp as was the decline immediately following the last Rupee loan. In spite of the reaction due to profit-taking, the present level of giltedge prices is only slightly lower than that attained on the eve of the Rupee loan. A scrip like the 3½ per cent. 1947-50 loan is but 1½ points below the high watermark reached in the earlier boom. If after the severe shake-out and utter demoralisation that were witnessed three months ago, there could be so substantial and so rapid a recovery, this may be taken as clear and convincing evidence of the intrinsic vitality of the giltedge market and of the bungling tactics of the Finance Member which so seriously impaired that vitality. Had there not been this mis-handling of the giltedge situation, 3½ per cent. New Loan might well have touched Rs. 100 by this time; and 3½ per cent. Rupee Paper might be in the vicinity of Rs. 95. Even as it is, if no untoward developments take place, and if the Government do not butt in in a way calculated to disrupt giltedge prices, there is every ground for anticipating far higher levels than the present by the middle of September. We look upon the middle of September as an important stage in the giltedge market. By that time, Rs. 13 crores would have flowed into government securities; and those, who know the size and capacity and nature of the giltedge market, would have no hesitation in affirming that purchases on so large a scale might well result in giltedge securities recording a rise of, say, five points. It is quite possible, on the other hand, that those who had bought considerable securities in the last rise would avail themselves of the first opportunity to take their profits as soon as 3½ per cent. Paper passes the limit of Rs. 89, 3½ per cent New Loan passes the limit of Rs. 96 and 4 per cent. 1960-70 passes the limit of Rs. 100. We are prepared for fairly substantial sales at all these levels. But we do believe that during the rise that took place in July, profit-taking of this nature occurred for fairly substantial amounts. There may not be more than Rs. 1 crore or Rs. 2 crores that will thus be disposed of by operators looking forward to the materialising of the rates prevalent in the pre-Rupee loan period. Our own view is, therefore, that, on the one hand, sales to a certain extent are inevitable; and that, on the other hand, purchases would be for far higher amounts. In the result, we look forward to a distinctly brighter future for giltedge. When the debacle occurred, it was suggested in these columns that the Government's folly in the matter of allotment of the Rupee loan and in regard to the Sterling loan would mean not the non-materialising of the era but only the postponement of its advent. We have every reason to believe that future developments would confirm our original estimate of the future.

Indian Finance has been watching the developments in America with all the interest that is evoked by an experiment inauguarated and carried out by a masterful personality. In this connection, we have received the following brief note from a banker:

> "I think, as far as I can gather from the scrappy news that comes through every now and again, that the U.S.A. is the only country in the world to realise what 'Planned Money' means both in theory and in practice. That she will succeed is beyond any possible doubt whatsoever. When this country (India) adopts it, you'll see a new era and a nation revived. But will she? I'm afraid not, not while orthodoxy rules—I mean the old orthodoxy."

The Financial Correspondent of the *Rangoon Gazette;* whose contributions are always well-informed and authoritative, is equally hopeful of the outcome of the American experiment. He writes in the issue of July 22:

> The raising of the American price-level should be viewed as a domestic problem. If other countries do not feel the need for raising their internal prices, it cannot be said that the American experiment is having any harmful effect on their economy. It is quite possible that when the benefits accruing to American economy as a result of the unique experiment now in progress are realized in Europe, the continental countries might decide to raise their internal price-levels and otherwise embark upon large internal development programmes. Although at the present moment sentiment is definitely against experimenting with currencies—and the feeling is strongest in Germany whereas a result of the painful experience of inflation, the pretence of gold standard is kept up by means of controls, defaults and moratoria—a time may soon arrive when a futher devaluation of currencies in terms of gold will be recognized as the easiest method of restoring economic health.

Exchange has been extremely and painfully dull. Brokers are absolutely despondent. They complain that they have not seen for years a week so dull. No Bills have been offering nor has there been any demand for remittance. On the sterling tender day, applications for £825,000 at 1s. 6 1/16d., were received and allotted in full. Lower tenders were rejected.

T. T. may be quoted 1s. 6 3/64d., right up to end of the year. But this rate must be said to be but barely available.

Bills may be quoted: 1s. 6⅛d., up to October; and 1s. 6 9/64d., November-December.

Money was very easy. The nominal rate for interbank credits was ½ per cent. Union rates for call, three days and seven days notice money were quoted ½ per cent. Onemonth, twomonth and three month deposits quoted 1, 1¼ and 1½ per cent. respectively.

FINANCE ABROAD

There never was a week, during the long course of the depression, with more concentrated pessimism than the one under review. It opened with the sensational news of the break in stock and commodity prices in the United States. With its close came to end the World Economic Conference. Despite its unimpressive start it had endeavoured valiantly to avoid the impression of a futile or tame end.

The closing scenes of the World Economic Conference have been even more unimpressive than its contentious deliberations of the last one month. When the plenary session of the Economic Conference met on the afternoon of June 21, it was confronted with a 34 page report embodying the deliberations of all the sub-committees relating to commercial policy, exports, etc. Mr. Runciman, the *rapporteur* of the Commission had little to say by way of expounding the work of the Conference. In fact, despite his tendency not to depreciate the work unduly, his view of their value may be guessed from the amendment he proposed on the report of the Economic Sub-Commission. The report mentioned that "important progress' has been made in most questions. But Mr. Runciman, considering these words too optimistic, suggested that in the place of "important progress" should be substituted the words "important results". M. Bonnet, who was the *rapporteur* of the Monetary Sub-Commission, naturally referred to America's opposition to stabilisation as an "insuperable obstacle". The more practical discussions centred round the best way of preserving the Conference in the form of a mummy. The precedent of the Council of Ambassadors chosen in the Versailles Peace Treaty to supervise the execution of its provisions, has been cited in this context. But in singular contrast to the Treaty of Versailles, the World Economic Conference has brought about no agreement which it would be the task of any committee to execute. And so closes the miserably insincere and incompetent effort at concerted international action for revival of World trade and economy.

The Silver Agreement is perhaps, on a different footing. From the beginning the American Delegation or rather that part of it which is interested in improving the position and prospects of silver, have gone about their task with determination and a deal of circumspection. Of no other committee can it be said that the leading figures had attempted even before meeting at London to arrive at some sort of mutual understanding with the other parties concerned about the lines on which a solution of their problem might be attempted. It may be recalled that, before he left Washington for the London Conference, Senator Pittman succeeded in bringing about an agreement between the United States, Canada and Mexico about the lines on which the producers of silver would attempt to formulate proposals for the resuscitation of silver. When they met in London, the principal obstacles were in the shape of the Chinese demand for a stabilised silver price and the Indian demand that, in any scheme that might be agreed on at the conference, India must have freedom to continue to sell limited quantities of silver to some extent. At a time, it seemed as though the producers could not find their way to placate the Chinese and the Indian delegates. But while the Chinese were clearly asking for something more than world trade and finance could possibily find it possible to ensure, the Indian standpoint was eminently reasonable and far from unpracticable. If India were not to have freedom to dispose part of her unwanted stocks of silver, she stands to gain nothing from her abstinence from silver sales. All that can be expected of her in the common interest is a regulation of the amount which she may be free to sell on the market within a specified period. It may be recalled here that at the time the Indian Delegation left India for the Conference, it was pointed out in these columns that the Indian Delegation, while giving their heartiest co-operation for the conclusion of a silver agreement in the interests of all concerned, should endeavour to secure for India the freedom to take advantage of every advance in the price of silver to sell a certain amount of her stocks of the metal. It is gratifying that the agreement has been exactly on the same lines as were contemplated in our comments on this question.

The only welcome event, since these columns were written last, is the announcement of a conversion offer covering the balance of the 5½ per cent. loan of 250 million dollars raised by the British Government in the United States in 1917. Holders are offered the opportunity of exchanging their stocks into 2½ per cent. sterling bonds at the rate of £260 for each 1,000 dollar bonds. According to the terms now announced, these bonds will be repaid at par in 1937. As the amount now outstanding of the 5½ per cent. loan is 136 million dollars, the effect of the exchange, if all bonds are converted, would be to increase the nominal amount of bonds outstanding from £28 million to £35 million. But the annual interest charges are reduced from £1,540,000 to £886,000.

The purpose of the new offer is to set right the changes, which occured since the loan was contracted, tending to affect the position of the holders of this loan. It was originally stipulated that the interest and principal of this loan were to be paid in gold dollars or sterling at the option of the holders. When Britain abandoned gold the holders naturally signified their option to take payment in dollars, for sterling was then a depreciated currency and the dollar was firmly anchored to gold. But with the abandonment of the gold standard by the United States the dollar has ceased to represent the full value for the moneys paid by the holders of the loan to the British Treasury. It, of course, remains for them to claim repayment in gold dollars; but the British Government was under no obligation to make payment in gold dollars because the legislation of the United States dispensed with the gold clause. The United States did not observe such a clause either in the case of its nationals or in the case of foreigners, who have lent out their moneys to the Government of the States. In these circumstances, the United States nationals could not, either on moral or legal grounds, claim full payment in gold. But the British Government have always been sticklers to what they call the sanctity of contractual rights and have been anxious to make it clear that the Government did not propose to take unfair advantage of the position resulting from the legislation in the States. It is obvious that the new offer does not make good the entire loss resulting from the depreciation of sterling and the depreciation in the dollar. But it is clear that the Government have not taken full advantage of the present predicament of investors in the States. Since the conversion is not from one dollar loan into another, but from dollar obligations into sterling obligations, the announcement of the British Government may be interpreted as an attempt to repatriate the loan to Great Britain. The Treasury scheme was duly passed by the House of Commons on July 21st.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

WHY YOU SHOULD SHOP AT
CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE.

(From Our Correspondent).

Calcutta, July 27.

Government Securities.—This section has continued to remain firm this week also, but on Thursday prices eased off a little, but the undertone, however, was steady. 3½ per cent. rose to Rs. 85-11 but closed at Rs. 85-6. 4 per cent. 1960-70 roundabout Rs. 98-2, 5 per cent. 1945-55 loan was steady at Rs. 113, 3½ per cent New Loan met with enquiry up to Rs. 95, 5 per cent. 1935 Bonds quoted Rs. 104-14, 5 per cent. 1940-43 loan Rs. 107-8, 6½ per cent. Treasury Bonds (1935) Rs. 107-10.

Cotton.—There was not much business passing in this section during this week and the tendency was to be weak. Kesorams, however, quoted Rs. 3-6.

Jute.—Quiet conditions prevailed in this market. Due to heavy selling in Wall Street Jute Goods market was more or less affected and in sympathy with this, jute prices were inclined to be weak. Howrahs moved back to Rs. 50-2, Kamarhattys were easier at Rs. 490, Barnagores came to business at Rs. 143, Champdany at Rs. 135. Hooghly Rs. 69-8, Hukumchand Rs. 17-12, Orient Rs. 216-8, Presidency Rs. 5-13, Belvedre Rs. 370, Birla Rs. 10-2, Budge Budge Rs. 347, Dalhousie Rs. 375, Fort William Rs. 267-8, National Rs. 23, Reliance Rs. 73, and Lothian Rs. 302.

Tea.—This section has also remained firm in spite of the holiday on Tuesday. Profit-taking continued but prices showed little or no improvement and the volume of business was smaller. Bisnauths were on offer at Rs. 23-12, Dessai and Parbattia were easier at Rs. 347, Hantaparas had sellers at Rs. 400, Hasimaras were steady at Rs. 35-4, Banarhat were marked up to Rs. 325, Loobah was marked up to Rs. 8, Tezpores improved to Rs. 7-8, Dunseri Rs. 3-6 and Hattikhiras Rs. 22. Most of the business done was at last week's closing quotations.

Coal.—Enquiry for coal shares was in evidence during this week also, there being a fair enquiry for bazar favourities. Amalgamateds were dealt in at Rs. 13-8, Bengals had buyers at Rs. 210, Burrakurs improved to Rs. 10-12, Pench Valley were dealt in at Rs. 31-12, Raneegunge were better at Rs. 30, Equitables came to business at Rs. 17, Standards were dealt in at Rs. 24-4, Unions at Rs. 10-12, West Jamurias Rs. 6-4, and Bhulanbararee Rs. 6. Burra Demo Rs. 4-2, Naziras Rs. 7-6, New Beerbhoom Rs. 9-6, Rewa coalfields Rs. 9-12, North Damuda Rs. 3-5, and Talcher Rs. 1-9. This enquiry, however, seemed to increase and in some cases prices showed an upward tendency.

Banks & Railways.—In Bank shares, Imperials fully paids quoted Rs. 1,193 and the Contributories Rs. 296½, Central Bank Rs. 23, Allahabad Bank Rs. 327 and 160, Bank of India Rs. 102½ and Eastern Bank Rs. 65. In Railway shares, Baraset-Basirhat Light Railway, quoted Rs. 49, Darjeeling-Himalayan Rs. 78-12, Arrah-Sasaram Rs. 50 ex. dividend, Burdwan Cutwa Rs. 76, Hardwar-Dera Rs. 101, Kalighat Falta Rs. 76 and Sara Serajgunj Rs. 83.

Miscellaneous.—This section was more or less the same as last week and a small amount of business was transacted. Sugar shares were quiet, Carew & Co., changing hands at Rs. 14-14, and Samastipurs at Rs. 16-12, Ryams improved to Rs. 46-2, while New Savan had sellers at Rs. 16. Among Engineering shares, Indian Standard Wagon (Ordy.) dropped to Rs. 40-8 ex. dividend, Indian Iron and Steel were steady at Rs. 4-10, Indian Galvanising accounted for business at Rs. 9-8, Burma Corporations were steady at Rs. 9, Digwarrah Rubber recorded a deal at Rs. 5-12. Spence's Hotel quoted Rs. 1-2, Upper Ganges Electric Rs. 7-8, Bengal Aerating gas Rs. 60, Shahjahanpur Electric Rs. 6, British Ceylon Corporation (Ordy.) Rs. 6-12, Bengal paper (Ordy.) Rs. 72-8, Jubbulpore Electric Rs. 10-6, Howrah Oil Rs. 10-4, Midnapore Zemindary Rs. 68.

BOMBAY STOCK EXCHANGE

(*By Wire.*)

(From Our Correspondent).

Bombay, July 27.

Giltedge securities altogether ruled firm. 3½ per cent. Government Papers closed to-day at Rs. 85-3, recording an advance of As. 10 over the last week's closing rate, the lowest rate touched being Rs. 83-13 and the highest Rs. 85-13.

With cloth markets stagnant bullish enthusiasm for cotton subsided. Mill shares have gradually declined, Bombay Dyeing coming down from Rs. 813-12 to Rs. 800. Fazulbhoys declined from Rs. 376-4 to Rs. 348-2 after touching Rs. 345. Pearls dropped from Rs. 252-8 to Rs. 239-6 after touching Rs. 235 and Centurys from Rs. 250 to Rs. 239-6. In Industrials Alcocks which jumped up last week declined to Rs. 185. Burma Old declined to Rs. 396-4. With the question of dividend yet unsettled, Tata Steel holders become unnerved and ordinaries have eased by two rupees to Rs. 54-6 and Second Preference by Rs. 2½ to Rs. 87 and Deferred by Rs. 7½ to Rs. 212½.

Increasing imports of foreign cement have influenced some selling and hence Indian Cement suffered a drop of Rs. 10 closing at Rs. 282½. Bundis also weakened by As. 12. Tram shares have eased to Rs. 137-13 and Tata Hydros to Rs. 158-7 but Andhra Valley and Tata Power still hold attraction for investors. Fluctuations were as follows:

	Closing on 13th	Highest	Lowest	Today's closing
Andhra Valley ...	1,451-4	1,466-4	1,446-4	1,456-4
Tata Power Ord.	1,027-8	1,045-0	1,022-8	1,026-4

Altogether sentiment is rather bearishly disposed though only moderate decline is to be expected.

THE INDIAN STANDARD WAGON COMPANY, LIMITED.

NOTICE

is hereby given that a Dividend of Re. 1-4-0 per share for the year ended 31st March, 1933, on the Ordinary Share Capital and the Dividend of 7% on the Preference Share Capital, free of Income Tax, have been declared payable on or after the 1st August, 1933. Dividend Warrants will be issued to registered shareholders on receipt of their applications. Payments to Banks will be made on receipt of the usual applications, covered by an Indemnity, where necessary.

JUTE AND JUTE GOODS

JUTE.

During the week under review there has been a sharp decline in the values of Jute. October futures came down from Rs. 34-8 to Rs. 31, the closing being a bit steady at Rs. 31-8. The decline has been sharp and steep in sympathy with the fall in American markets. Very little business has been done either by the mills or the shippers. Arrivals of new crop are already making themselves felt and there is a considerable selling pressure visible in the market. Hedge sales are not bought back in absence of business, and even short sales are not easily absorbable. The result has been that in spite of a steadier tone in other markets, the jute prices remain unaffected. The technical position of the market is that blank sales are not inconsiderable and covering orders will raise the values whenever they appear. Short sales cannot press the values further down. It is therefore not desirable to remain bear at these levels.

JUTE MANUFACTURES.

During the major part of the week the hessians market in Calcutta has ruled quiet, prices for ready nine porters hessians touching Rs. 11. The fall was due to the slump in the American markets. Towards the close, however, the tone of the market has been fully steady. Bull liquidation was over. Fresh business from South American ports had a healthy effect on the market and prices towards the close are steady ruling near Rs. 11-6. As a matter of fact, the steady tone is very pronounced in nine porter hessians the only drawback being that there is a shortage of this weight. Ready Pucca delivery orders were purchased by an important shipper today with the result that prices immediately rose by four annas. Bull holders are thereby encouraged and they are buying for near positions.

There has been little rise in heavy goods. Eleven porter hessians are also in fair demand. The position of the market, however, is quite healthy. Buyers for both near and distant positions are showing interest and the technical position of the market is thus getting stronger. In the near future, the market is likely to rule fully steady. The only weak factor at the moment is that in case export during July does not exceed manufactures, a decline in the market is inevitable. If on the contrary it comes up to expectation a further rise is sure to take place.

COTTON AND COTTON GOODS

COTTON.

(By Wire.)

(From our correspondent).

Karachi, July 27.

The cotton market is dull and there is practically no export demand. Daily arrivals amount to about 1,000 bales. Sind Ready is quoted Rs. 17.4 and Sind American Rs. 22-12.

Bombay, July 27.

Startling bear move which befell American commodity markets including cotton, continued on Friday and Saturday, October touching lowest at 9.58. But panic subsided as distress selling came to end and trade continued its support. Later with confidence restored, prices have been advancing. Weather news are mixed. Crop is expected to be round about 14¼ million bales irrespective of proposed reduction according to Government plan.

The local market moved along with American markets but in a quieter manner.

During the week under review the cotton market has ruled very erratic and on the whole there has been a good and sharp decline in values. New York spot middling has dropped down from 11.75 cents to 10.50 cents. Liverpool likewise has fallen from 6.48 to 6.22. April-May Broach has declined from Rs. 235 to Rs. 225 per candy.

As reported last week the decline was not unexpected. Bull liquidation on the completion of the acreage scheme was inevitable. It did come and has made the technical position of the market sound. Rise from 8 cents to 12 cents was too rapid and a decline of 1.5 cents is quite justified. The decline was as rapid as the rise and was not only confined to cotton but was noticeable in almost all the commodity and stock markets in U. S. A. Wheat, Barley, Rye had all witnessed a similar precipitate decline and twice during the week, business in grain markets of Chicago and other centres had to be suspended. Not only that, but daily fluctuations were also restricted by the Board. It appeared as if the American markets were on the verge of a collapse. But as soon as the liquidation was over the fall had been arrested. Later information received from America is more encouraging. The nervousness is mostly over. The new code prepared by President Roosevelt regarding the rise in wages and regulation of working hours for various industries has inspired confidence in traders and businessmen. Although there has been no fresh speculative activity in the markets, trade demand has shown some improvement and the undertone of the American markets seems to be quite healthy and encouraging. The concensus of opinion has been that the decline at this stage is a very good sign. The technical position of the markets is consolidated, weaker holders have been pushed out and speculative fever is diminished. The erratic fluctuations of the dollar that were taking place during the previous week have been less violent, and this week, it seems that more or less steady conditions will prevail in this section of the market. Taking a longer view of the position it appears that slowly and gradually the market will be bucking up. Purchases at every decline may therefore be considered desirable.

The following is an extract from the proceedings of the Millowners' Association, Bombay :—

IMPORTS OF COTTON YARN AND PIECEGOODS INTO *'India'* DURING MAY, 1933.—*General*—Cotton yarn imports at 4.1 million pounds were exceptionally heavy, and were nearly double the April figure. They were in fact greater than the imports during any single month since September, 1932. The imports of piecegoods, on the other hand, showed a falling off and were lower by nearly 3 million yards as compared with the imports in April.

Cotton Yarn—The imports of grey singles yarn totalled 2.8 million lbs. of which 2.3 million lbs. were of 31s. to 40 s. counts. China's share of the trade in this range of counts was 1.7 million lbs. as against 722,000 lbs. in April. Japan also improved her position by sending 565,000 lbs. of 31s. to 40s. count in May as compared with 165,000 lbs. in April. The imports of grey singles yarn above 40s. remained practically stationary at 421,000 lbs., the major portion of which was imported from the United Kingdom.

Imports of grey two-folds yarn amounted to 362,000 lbs. as compared with only 78,000 lbs. in April. Japan increased her share of the trade from 28,000 lbs. in April to 159,000 lbs. in May, whereas China sent no less than 172,000 lbs. as compared with only 14,000 lbs. in April.

Imports of bleached yarn showed a decline from 323,000 lbs. in April to 291,000 lbs. in May. Great Britain continued to be the chief source of supply for this type of yarn, but it is noteworthy that Japan increased her share of the trade in two-folds bleached yarn from 17,500 lbs. in April to 55,000 lbs. in May.

There was a slight increase in the imports of coloured yarn from 123,000 lbs. in April to 129,000 lbs. in May, of which 53,300 lbs. were of 31s. to 40s. counts, imported from the United Kingdom.

Mercerised yarn imports were also much higher during the month and totaled 534,000 lbs. as compared with 351,000 lbs. in April ; all the imports were two-folds yarn. Of this total 527,000 lbs. were imported from Japan as compared with 350,000 lbs. in April.

Cotton Piecegoods—The total importations of cotton piecegoods in May amounted to 87 million yards as compared with 89.7 million yards in April. It is interesting to note that Bombay's share of the trade increased from 21 million yards in April to 24 million yards in May, while imports into Bengal were lower by 2.3 million yards.

Grey goods (plain and bordered)—Grey goods were imported to the extent of 28.2 million yards as against 26.6 million yards in April, and were made up of 16 million yards of plain greys and 12 million yards of bordered greys —mostly dhoties. It is specially worthy of note that whereas Japan and the United Kingdom held the trade in practically equal shares during March and April, the imports from Japan during May at 18.4 million yards were double the imports from the United Kingdom.

Bleached goods—There was a further decline in the imports of bleached goods which stood at 32 million yards as compared with 35.3 million yards in April. The sendings from the United Kingdom declined from 26.2 million yards in April to 23 million yards in May, while Japan slightly increased her share of the trade from 8.4 million yards to 8.9 million yards.

Coloured, printed and dyed goods—The imports of coloured, printed and dyed goods at 24 million yards were also lower by about 2½ million yards than the imports in April. There was a distinct falling on in the imports from the United Kingdom, which were lower by nearly 3 million yords, while imports from Japan increased from 10.7 million yords in April to 11.2 million yards in May.

Imports of fents during the month were considerably higher than during April. The total quantity of fents imported came to 3 million yards as compared with 1.4 million yards in April. Of this quantity, 1.9 million yards were imported from the United States as compared with only 5,61,000 yards in April.

Artificial Silk Piecegoods—There was a welcome fall in the imports of artificial silk piecegoods from 9 million yards in April to 6 million yards during the month, of which no less than 5.2 million yards were imported from Japan (as against 7.8 million yards in the previous month) and consisted almost entirely of pure artificial silk goods.

London.—The Bank of England bullion reserves against notes ammounted to £191 millions, and showed no change over the previous week.

There has been a decline in the price of Gold after the closing rate of £6-4-6 last week, presumably, owing to a decline in the London-Paris cross rate.

London—(Air Mail Week).—

Gold reserves of the Bank of England against notes amounted to £189,694,971 on the 5th inst.; showing an increase of £335,044 as compared with the previous Wednesday.

No purchases of gold have been announced by the Bank during the week. In the open market, moderate amounts of gold were offered, and a good proportion of these was taken up by parties whose names are not disclosed. There was, however, keen competition from the continent and prices continued to show a substantial premium over the franc parity. The average of the quotations during the week was 124s. 9d.

The Transvaal gold output for June, 1933 amounted to 918,633 fine ounces as compared with 944,604 fine ounces for May, 1933, and 959,011 fine ounces for June, 1932.

The following were the United Kingdom imports and export of gold registered from mid-day on the 3rd instant to mid-day on the 10th instant:—

SILVER.

(From our correspondent)

By Wire.

Bombay, July 27.

Silver rates which ruled dull, all of a sudden leapt up on agreement being reached over restriction of sales. Shravan rate jumped up from Rs. 55-14 to Rs. 58 but bullish ferment has subsided as pessimistic opinions were expressed and the rate to-day stood at Rs. 56-5 at 6 p.m.

There have been erratic fluctuations in the silver market this week. Following the news that an agreement has been reached between India, China and silver producing countries regarding the sale quota, the market witnessed a sharp rise, values going up to near Rs. 58/- since then the bull liquidation in America followed. China came out as seller in the London market and values began to decline.

The opinion of the market has been that the agreement reached in London does not take us very far. It simply refers to sale quota and that too comes in operation in 1934. No new use of the white metal for Currency purposes has been found. The American 'longs' may come out as sellers any moment, hence the local dealers are not bullish in their ideas.

Stock position is not tending to bull force and internal consumption is equally poor. Distress silver is not wanting, but is flowing in large quantity in port towns. The result is that there are more sellers than buyers and there is little to interest the long holders and investors to carry silver.

London—(Air Mail Week).—

After several weeks of a kind of 'boom' in Silver, the market developed a very easy tendency during the week, and prices fell sharply, till they reached 17¾d. and 18d. for cash and for 2 months delivery respectively, on the 10th inst. Indian Bazaars continued to support and there was further speculative buying, but the demand, although improved by some buying on China account, was of a very restricted nature. Weakness manifested itself particularly in the afternoons, America coming forward to sell at prices below those fixed. There was a sharp reaction on the 12th inst., and the tendency of the market seems to depend on

the movements of the dollar exchange, whilst there is also the likelihood that the proposals that may be made at the World Economic Conference may influence it to a large extent. The average of the quotations during the week was 18.177d. for cash and 18.302d. for two months delivery.

The stocks in Shanghai on the 12th inst. consisted of about 126,200,000 ounces in Sycee, 277,500,000 dollars, and 6,300 silver bars as against about 126,200,000 ounces in Sycee, 272,500,000 dollars and 6,300 silver bars on the 4th inst.

TEA

Calcutta—Sale No. 7 was held on the 24th and 25th July, 1933. 12,904 packages of Tea for export and 1,809 packages of Leaf and 2,776 packages of dust for internal consumption were offered. The offerings were of smaller size than at the preceding sale. There was a useful selection of Assams and a few invoices of flavoury Darjeelings. Dooars quality showed a further decline, but was on the whole quite useful. Common tea was again scarce. There was a good general demand and the sale passed with a brisk tone. Common and low medium brokens were 3 pies and leaf Teas up to 9½ As. frequently 3 to 6 pies dearer. Good quality again sold well, but where quality showed even a slight falling off, a considerable drop in prices occurred.

Among teas for internal consumption, there was a general advance in prices. With smaller suplies available the sale passed quickly, all grades except Fannings being about 3 pies dearer. Dusts were fully firm to 3 pies dearer, except the very leafy kinds which were barely steady

London.—Offerings this week at the Tea sales were made up of 51,373 packages of Indian, 25,620 of Ceylon and 10,249 of Java Teas. There was a strong demand for all Teas up to 11 d per lb. and prices were generally higher by about a farthing. At the London auctions of Indian Tea on July 25th there was an active demand for all kinds at generally firm prices which were ¼ d to ⅜ d per lb. dearer. Ceylon Teas too were in great favour and there was an advance of about ½d. per lb. allround.

The following were the lowest prices fetched during the day's auction:—

Common Pekoe last auction 9d., to-day's auction 9⅛d. per lb.; Common Broken Pekoe last auction 9d., to-day's auction 9⅛d. per lb. Common Broken Orange Pekoe last auction 9½d., to-day's auction 9½d. per lb.. Common Broken Pekoe Souchong last auction 9⅜d., to-day's auction 9½d. per lb.

The following are the value prices:—

Clean Common Pekoe last auction 9⅜d., to-day's auction 9⅝d. per lb.; Clean Common Orange Pekoe last auction 9⅝d., to-day's auction 9¾d. per lb.; Clean Common Broken Orange Pekoe last auction 9¾d., to-day's auction 10d. per lb.; Clean Common Broken Pekoe Souchong last auction 9⅛d., to-day's auction 9¾ per lb.

PATNA, DACCA

At the London auction on July 20, 9,700 packages of Java and other Teas including Sumatra were offered for sale. There was a lively demand for all sorts. Rates were from a ½d. to a penny per lb. higher. Tippy Teas were considerably higher. Fanning and Dust varieties slightly improved and there was a large export enquiry.

The following were the lowest prices fetched during the day's auction:—

	Last auction per lb.	To-day auction per lb.
Common Pekoe	6½d.	6½d.
Common Broken Pekoe ...	5½d.	6¼d.
Common Orange Pekoe ...	7d.	7⅜d.
Common B. O. Pekoe ...	6½d.	7¼d.
Common B. P. Souchong ...	7¼d.	7¾d.

The following were the value prices:—

Clean Common Pekoe ...	7¼d.	8d.
Clean Common B. Pekoe ...	7⅜d.	8d.
Clean Common O. Pekoe ...	8d.	8¾d.
Clean Common B. O. Pekoe	7⅜d.	8⅛d.
Clean C. B. P. Souchong ...	7½d.	8d.

Tea Average Prices.

The following were the average prices of tea in the London market during the week ended July 20.

	Last week. per lb.	This week. per lb.
Indian Tea (Northern) ...	9.91d.	10.46d.
Indian Tea (Southern) ...	9.77d.	10.36d.
Ceylon Tea	11.83d.	12.53d.
Java Tea	7.87d.	8.59d.
Sumatra Tea ...	7.48d.	8.47d.

SUGAR

The market during the week under review has ruled firm and values have been slightly over the previous week. It is partly due to firmer advices from Java and partly due to the lowness of stock of sugar foreign as well as Indian. Demand has been better and holders are firm in their ideas on account of the paucity of fresh sales by mills.

There is nothing sensational in the market and it looks as if it will remain like that for some time.

Stocks at the main Indian ports are estimated as below:—

(In Bags, 10 bags=1 ton)

Calcutta (19th July)	...	34,850	(20th July)	51,000
Bombay (20th July)	...	65,000	(20th July)	70,000
Karachi (14th July)	...	52,000	(15th July)	37,500
Madras (17th July)	...	19,500	(18th July)	18,000
Rangoon (17th July)	...	7,180	(18th July)	6,300

Bombay—Market has remained dull and easier in values offtake is not very encouraging and fresh arrivals are soon expected which will also go to keep the market easy. Similar conditions prevail in Kathiawar ports. Jamnagar is reported to have slightly lowered its selling limits in order to clear stocks.

U. P.—Condition in Cawnpore and Delhi markets are almost unchanged. Trading has been restricted for hand to mouth requirements. Now and then sales are made by the adjoining factories and the market has remained more or less featureless.

Quotations are:—

Calcutta.	Java Sugar.	Cawnpore.

GRAINS AND SEEDS

WHEAT.

(By Wire)

(From our Correspondent.)

Karachi, July 27.

After the recent feverish rise in wheat, the market has considerably weakened and the predominant tone at present is bearish. Ready demand is poor, only local mills being interested. Daily arrivals from uncountry are approximately 25,000 bags. A portion of the local stocks has been damaged by last week's heavy rain. Ready is quoted Rs. 25-14 and September Rs. 26-14.

Due to the slump in America grain markets the local market in wheat was weak and a drop in values spot as well as forward is noticeable. Weather conditions in the wheat growing districts in India is more favourable and has added to the weakness of the local market. Prices for ready spot goods have fallen by about four annas per maund while May and September Betas have shown a decline of about two annas.

Later telegrams from America are however not discouraging. Trading in grain futures, which was temporarily suspended for a day has been resumed and in various grain markets limits for fluctuation and also for individual holding are fixed. Winnipeg futures which fell from over a dollar a bushel to 82 cents has shown a small recovery towards the close. The nervousness that was manifest early in the week is disappearing and confidence is being restored.

Local market though weak in sympathy with America, did not display much nervousness. Statistical position of Indian wheat is fairly sound, and consequently beyond bull liquidation of long futures there was no distress sale in the Indian market. Stock holders are not displaying any weakness considering the fact that the inherent position of the market is satisfactory.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

GROWER *versus* INDUSTRIALIST.

We are indebted to the *Times of India* for an able exposition, by its City correspondent in London, of the various factors connected with the use of Indian cotton by Lancashire. Sir Purshottamdas Thakurdas and Mr. H. P. Mody, who are now engaged in discussions in Lancashire on this question, may be said to represent, respectively, the interests of the raw material and the manufactured product. As President of the East Indian Cotton Association for a number of years, Sir Purshottamdas has intimate and first hand knowledge of all the problems connected with East Indian cotton. As Chairman of the Bombay Millowners Association, Mr. Mody has had the amplest opportunity to understand the full needs and requirements of the mill industry through all the difficult conditions which it has been faced with in the past ten years. It may, therefore, be safely said that as regards the present negotiations with Lancashire, India could not have had two trustier or better-informed representatives. Mr. Mody is taking part in the talks under circumstances which have tended to cast some suspicion on his motives. The Indian public are not in a mood to look kindly on a combination of Bombay and Lancashire as against Japan. Any understanding on this matter would be tolerated only if there is a definite plan which will be resolutely put into effect for the purpose of causing a considerable increase in the quantity of Indian cotton used by Lancashire.

* * *

Mr. Mody must be fully aware of this ; and we have, therefore, every confidence that he would not make any commitment unless the Indian cotton grower had his interest suitably safeguarded. Even if, from the point of view of his own industry, he should find considerable temptation as regards the conclusion of any settlement with Lancashire independent of the latter's use of Indian cotton, he knows that public opinion in India would disown the settlement unless there is a guarantee that to the extent that Japan may buy less of Indian cotton, Lancashire would be prepared to make up the leeway. Another handicap under hich Mr. Mody suffers is that he has identified himself with the Employer's Association representing a few Indian and most European interests. The general belief is that this was set up as a rival show to the other federation sponsored entirely by Indian manufacturers. It is, therefore, regarded that Mr. Mody is apt to succumb to the blandishments of Lancashire and to agree to an arrangement which might look all right from the point of view of the Indian mill industry and which might be all wrong from the point of view of the Indian agriculturists. Mr. Mody is, thus, in a delicate position so far as the present talks are concerned ; but from the reports received as regards his activities in Britain, we have no cause for misgivings that Mr. Mody will take any other than a broad and nationalistic point of view.

* * *

For the purpose of the discussions, Mr. Mody and Sir Purshottamdas must perforce devote considerable attention to the findings of the Jackson Committee. This committee considered in detail the question of the increasing use of Indian cotton by Lancashire ; and its conclusions emphasise that the prejudice against Indian cotton is due to several factors: *viz.*

(*a*) The difficulty of getting supplies of regular quality from year to year, as at present, it is complained, neither the supply, grade nor staple is regular.

(*b*) Buying on c.i.f., terms, even with a mutual allowance, the variety that can be tendered is so great that a regular quality of yarn cannot be guaranteed. If the cotton is inferior in either grade or staple it is often very little use for the purpose for which it is bought and the substitution of higher grade cotton in lieu of staple, or *vice versa*, is of no value to the spinner. If cotton is tendered on which an allowance of 20 points is made, it is more often than not unsuitable for the purpose for which it was originally intended and outside the range of cottons suitable for the purchaser's range of qualities.

(*c*) In buying on type the same type number in different years represents a different cotton to that received in preceding years.

(*d*) The small amount of cotton dealt in under the Liverpool Indian Futures Contract makes this Contract of very little use, in fact dangerous, to spinners.

(*e*) The very limited dimensions of the stock available in Liverpool makes it difficult to obtain cotton to carry on if a shipment is late or of the wrong quality.

(*f*) The ginning requires to be more carefully done in some cases; a large amount of seed often being found, while the quantities of trash (leaf, stalk, etc) are very detrimental.

(*g*) Complaints have also been made of admixture of *desi* cotton with the improved varieties, as well as of the mixing of staples.

In view of the prejudices discussed above, the Jackson Committee made definite recommendations as follows :

(1) That serious consideration be given to the setting up of Standard Grade types for all growths on the lines of the American standard.

(2) That a clearer and more definite system of staple indication be adopted as in American styles.

(3) That better staple must not be used as a set-off against inferior grade or *vice- versa*.

(4) That some method or system be instituted to ensure regular running shipments of grade and staple against Contracts.

The Indian Central Cotton Committee have dealt in detail with all these criticisms ; and they prove, conclusively yet courteously, that the various criticisms against Indian cotton have no foundation in fact and are a mere pretext to justify the attitude of Lancashire. In any case, there can be no ground for these prejudices in to-day's conditions which are entirely different from what they were a few years ago. Japan has been using considerable quantities of Indian cotton and she has had no complaints to make. Owing to the bigger export trade in cotton, for which development great credit is due to Japan, the organisation of the cotton trade in India has improved considerably. .The Cotton Committee declare unequivocally that Indian cotton is better baled than American. The general standard of ginning in India is not inferior, the bulk of the Indian cotton being roller ginned. On the other hand, the experience of Indian mills using American cotton has been that the latter is definitely less regular running than Indian, and, grade for grade, is not better ginned. As for the complaint of an absence of a large spot market in Liverpool or Manchester, it is difficult to understand why this should be any great impediment in the way of greater use of Indian cotton by Lancashire. Is there a spot market for Indian cotton in Japan, at all commensurate with that country's very large purchase of Indian cotton? Or is there any spot market for American or Egyptian cotton in Bombay although Indian mills are now using substantial quantities of these cottons annually? The deduction, which the Cotton Committe draw from these facts, is that the complaints formulated by the Jackson Committee are not based on recent experience. We should say that this is a very charitable interpretation of Lancashire's attitude. As our Bombay Correspondent pointed out in a recent communication, the plea of Lancashire that Indian cotton must

satisfy a number of conditions before it can be considered suitable for Manchester and Liverpool mills should be met by the plea that where there is a will there is a way.

BOMBAY CENSUS.

Our Bombay Correspondent writes:

In further elucidation of the figures you have given from the Bombay Census Report, I may quote the following particulars which would be read with great interest:

One out of every two persons in Bombay City is a worker. Of the male population, 693 persons out of every 1,000 are principal earners and of the female population, 128 out of every 1,000 are principal earners; 868 females out of every 1,000 are non-working dependents; and 316 males out of every 1,000 are in that category.

The principal wage earners of Bombay number 563,042, *i.e.*, 48.5 per cent. of the total population. The working dependents total 2,861 and constitute only 0.2 per cent. of the population whereas non-working dependents number 595,480 representing 51.3 per cent. of the population.

Of the principal wage earners 510,120 are males and 52,922 females, the number of non-dependents being 236,165 and 350 respectively.

* * *

From the foregoing statistics, it is clear that Bombay can be characterised as a city of workers. A very large section of the population is actively employed in earning a living and the numbers of children and old people are correspondingly small, but as compared with 1921, the number of wage earners shows a substantial decline.

* * *

The distribution of workers over various fields is a subject of interesting study.

Industry employs 154,466 males and 21,867 females.

Transport finds employment for 50,148 males and 580 females.

A little over 75,000 persons are engaged in trade.

The chief sources of occupation are seen to be:

1. Industry which employs 31 per cent. of the workers.
2. Trade which employs 16 per cent;
3. Unspecified occupations (which are mostly general undefined labour) which employ 22 per cent. and
4. Transport which employs 9 per cent.

About one in every three of Bombay's workers is employed in industrial occupation of one kind or another.

UPSET IN PRICES IN U.S.A.

The close of last week will be important in the economic history of 1933 for the sudden break in commodity prices in the U.S.A. after soaring on the wings of inflation for the last three months. It was reported that commodity prices were collapsing and the fall was so serious in the case of wheat and other commodity prices that in the Chicago and Kansas City markets trading was suspended. In Chicago, wheat fell below a dollar a bushel, rye dropped 26 points, maize 12 and cotton 72 to 80 points. On Saturday last there was wild selling in the New York stock exchange leading to a record turnover of 9,750,000 shares. Cotton and silver fell further lower. The explanation for this sudden onset of pessimism must be traced to the feeling that in the effort to whip a revival of trade, a new element of instability had been introduced and that it would be a problem for the Administration to eliminate that instability and help the restoration of balance. The publication of profuse statistical information is, in part, responsible for these irrepressible waves of hopeful and pessimistic sentiment. There can be no doubt that the President has allowed his enthusiasm for the new economic programme to get the better of his discretion. It should have been obvious to him that for a planned economy to be a success, it is necessary that it should be planned. What the President has actually done is to aid and abet a daily rise in stock and commodity prices merely on the strength of a threat, or promise, of inflation. He has, at the same time, attempted to avoid the adverse incidence of higher prices on the masses by agitating for the stipulation of economic wages at higher levels and the expansion of employment through lower working hours and institution of schemes of public expenditure.

* * *

It is probable that if the increase in prices had not affected the position of industries, there would have been less nervousness in the country. What really happened was that for fear of increasing prices of raw material and, therefore, of costs of production, industries had been heavy buyers of commodities like cotton. The increase in production which has been fairly all round was likewise due to orders placed to forestall the higher prices. The efforts of the Administration to expand the money income of the masses through increase in wages and expansion of employment had also progressed but slowly, though President Roosevelt had summoned all his powers of threat and persuasion to speed up the adoption of the codes of fair competition. The President himself had taught the people to regard the increase in wages and the increase in production as the two factors which more than any other had to be balanced to ensure the stability of the national economy. When it was learnt that the increase in production had far outstripped the increase in wages and also that the increase in the output of cotton and steel industries were not due to any really consump-

tive demand, people naturally rushed to the conclusion that the break of the boom was only a question of time. Our "Overseas" columns stress the growth of this feeling of hesitancy, especially on the part of bankers and brokers. It is not difficult to appreciate the danger of the emergence of such feelings of hesitation during a period of booming prices in stocks and commodities. General Johnson, who is the administrator appointed under the Industrial Recovery Act, had himself expressed sentiments of pessimism. In a highly over-wrought market, such as has prevailed in America in regard to commodities and stocks, the fall has naturally been of a serious kind.

* * *

In attempting to appraise the significance of the developments in America at the close of last week and early this week, it should be remembered that the economic policy of Mr. Roosevelt has not many friends left in Europe as, to all intents and purposes, it had stood in the way of the Economic Conference making progress with its tasks. Judging from the rapidity with which the markets have recovered, it is possible that the earlier reports had been vitiated by a degree of exaggeration. At any rate, it is certain that it was not so serious that Mr. Roosevelt could lose heart. The hero of the banking crisis must surely have enough pluck and daring to combat the evil of pessimism that has now reared its heads. And to all appearances President Roosevelt has tackled the situation with the same courage and firmness that characterised his actions when he first came to power at a moment of the severest crisis in America's national banking system.

* * *

The first measure designed to arrest the rot was the stipulation of the maximum fall in a day in each market. While formerly America believed in what has been rightly called a government guaranteed bull market, it is now a question of government guaranteeing that the market would not be overpowered by unduly bearish influences. Though foreigners might justly weigh the actions of President Roosevelt in the balance and find them wanting in more than one respect, the American public have not yet had anything to shake their confidence in their "Prosperity" President. They could well believe that Mr. Roosevelt, who could galvanise into life the dead banking system of the States could also cry halt to the downward movement of prices in stocks and commodities and consolidate the ground that has so far been won in the march towards prosperity. The President apparently still swears by his policy of pulling up wages to a level commensurate with the increase in prices. The slow-moving methods formerly set for General Johnson have now been abandoned in favour of a ready-made code to be despatched to all the employers in the States. This will come into operation on April 1st and will remain in force until December 31st. The programme of public expenditure has also been speeded up and the President has authorised the Department of the Interior to spend $25 million for transferring miners and others from overpopulated industrial areas to subsistence farms where they would find a new means of livelihood.

* * *

There is no doubt that of these the only immediately effective measure is the fixation of limits for the daily fluctuations of the market; and in so far as they are voluntary, they should prove to be more efficacious than if they had been imposed on the markets by a fiat of the government. One should not attempt to understand the situation merely on the basis of these concrete facts. There is the intangible, but surely potent, factor of the enthusiasm which the President will raise in the minds of the people by coming to the aid of the cause of revival in a moment of trial like the present. Surely, no one in America, not even those who had nodded their heads gravely against the impetuous progress of stock and commodity markets, could possibly welcome the adverse developments of last week end. And when the head of the nation, who has endeared himself to the people by championing the national economic policy in the face of a whole world gathered in Conference, comes to arrest the decline and chalk out lines of further progress, it is certain that nationalist sentiment will do all that is possible to help the President in his valiant efforts. The recognition that the progress of the last three months has been lopsided is potent both for good and evil. If its effects on market sentiment are insulated the action of the exchanges and the call of the President would only end in measures of sound reconstruction and genuine efforts to restore the lost disequilibrium between production and consumption. One might even suggest that the atmosphere created by the slump would help the President in the matter of the imposition of codes of fair competition in the same way in the which the banking crisis enable him to put through Congress the measures needed for the reconstruction of banking and finance.

* * *

One interesting and forceful point in this context deserves examination. It has been contended by the New York *Journal of Commerce* that the goodwill of employers is not the only factor that is needed for the success of Mr. Roosevelt's programme and that Mr. Roosevelt is wrong to base his plans on that assumption. For there are naturally a large number of employers in all countries, and not least of all in America, who have neither the credit nor the resources with which to effect the increase in

wages on which the President is so insistent. For our part, we find it hard to believe that the President or his advisers could have overlooked so simple a fact. It cannot be that the Administration is not prepared to make proper adjustments in the case of employers who are unable to bring up the wages of their employees to the desired levels. But what the Journal of Commerce apparently overlooks is that the number of such employers must diminish with the increase in prices and the increase in consumptive capacity. If the Administration seeks, as an immediate objective, only to bring about higher wage levels in the big corporations, it will have done more than is now necessary to restore vitality to the economic system.

* * *

But all this speculation is unnecessary to the extent that the decline has been arrested and evidence of recovery is available. In India, the commodity markets have followed the course of prices in America; and for the present it seems unnecessary to examine in relation to the Indian markets the developments in America which can have importance only if they threaten to continue for some time.

THE LAST GASP.

The last gasps of the world Economic Conference are given in detail in the section which we have specially devoted to it since the middle of June and which must now cease. The physicians who gathered at London to nurse world trade back to health and strength have been hard put to it to keep themselves alive. The peacemakers had more depressing squabbles amongst themselves than those they endeavoured to setttle. Cordiality was required only after it was decided to adjourn the Conference. There has been a deal of sophistry employed to hide the truth of the Conference's failure. But there was some plain-speaking also; and the fact that even the silver settlement has been regarded with scepticism by certain experts shows how the world views the work of the Conference as a whole. We are not surprised, nor, we are sure, would our readers be, that the Cnoference has come to nought. The next fortnight would perhaps, show the consequences of this failure on the economic policies of the various Governments. We still hold to our opinion that unless the task of world economic recovery is recognised as the problem of integrating various planned national economic policies future economic Conferences would be only meeting in vain. For the present America has taken the avoidable opprobrium of foiling the world Conference. If on the next accasion there is no one to come forward as an obliging scapegoat, the problem of world economy would perhaps be recognised for what it is, as something other than the application of a few preconceived principles of international trade and Finance.

TATA OIL MILL.

Eavesdropper writes:

On July 15, I wrote as under:

"Or, take the Tata Oil Mill Company. Indians are the exclusive owners of this concern. Few non-Indians use its products. Yet, its advertising campaign requires the talent and genius of a non-Indian agency; and it must needs conduct most of its publicity through the columns of non-Indian journals. The moral and lesson of which is this: It requires a magnifying glass of the extra power suggested by Sam Waller to scrutinise the credentials and bonafides of the industrialists, who make appeals for all manner of help and patronage on the score of nationalistic sentiment."

To which I have received the following reply from Mr. J. A. D. Naoroji on behalf of the Agents of the Tata Oil Mills Company:

"Our attention has been drawn to a reference made by you on page 95 about our Company in your issue of the 15th July. Your comments on our advertising programme are obviously based on incorrect premises and we are, therefore, writing this to inform you of the true position. You presume that few non-Indians use our products, but this is far from the case as one of our chief products viz. "COCOGEM" is used almost entirely by non-Indians. Our soaps are also finding their way into non-Indian homes and we have found from experience that when an Indian product of high quality is available at a reasonable price, it is bought by non-Indian buyers almost as readily as by Indians. Your second statement that most of our publicity is carried on in the columns of non-Indian journals is, of course, wholly incorrect as the share of the non-Indian journal of our total press publicity is just over 40 per cent. of the space used.

We hope that you will be good enough to admit that we are the best judges of our markets, of the needs of our constituents and of the papers in which we should advertise. We would have gladly given you this information, if you had taken the trouble to ask us for it. This is only written for your information but we hope that you will publish it in fairness to us."

I made three allegations:

1. Indians are the best patrons of the Tata Oil Mill products;

2. Yet, most of its publicity is in Anglo-Indian papers; and

3. The advertising campaign is in the hands of a non-Indian agency.

I might have added a fourth as under:

4. The selling agency is given to a non-Indian firm.

Dealing with (1), Mr. Naoroji says that Cocogem is used entirely by non-Indians. Their soaps are "finding their way into non-Indian homes." The latter statement means, I suppose, that, for the time being, the biggest custom still continues to be from Indians.

As regards (2), Mr. Naoroji is prepared to spend in non-Indian papers 40 per cent. of the total allocation for 10 per cent. of the total space. And he claims that they are "the best judges of our markets, of the needs of our constituents and of the papers in which we should advertise." Mr. Naoroji would not object, I hope, if the Indian papers also would claim to be the best judges in regard to the credentials of our Indian industrialists whenever the latter ask for support on the score of their being "Indian."

Mr. Naoroji has not answered (3). This is the one allegation on which a simple answer "yes" or "no" could have been given.

* * *

In this context, I am reminded of an incident that happened twelve years ago. At that time, I was engaged in business in Bombay. Due to my occasional visits to Madras, I came to learn a lot of disquieting things about the Tata Oil Mills at Ernakulam, and especially about the management and behaviour of Mr. Thomson, who was paid a fabulous salary. I happened to mention this to one of the partners of Tata Sons. The reply I received was almost in the same terms as are now used by Mr. Naoroji. He said: "We are the best judges of how to manage this concern, what men to appoint and what salaries to give." The Tata Oil Mill shares were then roundabout Rs. 400. Everyone was expecting sensational profits from this Company. The Tatas had the fullest confidence in their man, Mr. Thomson, who was considered to be a miracle-worker, and it was considered impudence on behalf of a little man like me to cast any adverse reflections on so renowned a miracle-worker. Yet within a few months, it was discovered that all the flamboyant estimates were being falsified. Mr. Thomson had not performed any miracle. He had merely squandered money. He was removed from service. The shares collapsed. The subsequent story of Tata Oil Mills is a tragedy. This Company set out to fulfil high-sounding schemes. They are now content with manufacturing soaps and edible oils. As for profits, they are just enough, I supose, to enable the proverbial "meeting of both ends." I do wish that Managing Agents would realise that all wisdom is not centred in them.

HIDES, SKINS AND LEATHER.

(From our own Correspondent).

Calcutta, July 27.

The hides and skins market continues steady, specially on account of shortage of supplies. The demand for better qualities of cow hides remains unsatisfied, and whatever lots are available in the market are being readily taken up by buyers at 4 annas per lb. (wet). Madras buyers are buying regularly in both Narkaldanga and Colootola markets, and are paying from 3 annas to 3½ annas per lb. (wet) for mixed lots. Calf skins are also in good demand. Heavy buffalo hides are being offered ½ anna per lb. (wet) higher than lighter varieties, which are being sold at 2 to 2½ annas per lb. (wet) in mixed lots. Goat skins have been a quiet market this week.

Mixed Dacca slaughtered dry salted (m.d.s. quality) are being offered at Rs. 6-4 to Rs. 6-8 per 20 lbs., by shippers, while mixed Dacca deads (m.d.d. quality) are being quoted at Rs. 5-9 per 20 lbs., while all round prices for dry salted cow hides may be quoted at Rs. 4-8 per 20 lbs.

To-day's prices in Calcutta market for the other qualities may be quoted as follows:—

Cows.

		Per 20 lbs.
1.	Dry framed Agras arsenicated ...	Rs. 6-8 to 8-8
2.	Darbhangas	,, 4-8 to 5-8
3.	Patnas	,, 4-4 to 4-8

Buffalo Hides.

		Per 20 lbs.
Dry Arsenicated	... ...	Rs. 3-4 to 4-0

Goat Skins.

Good Quality	...	per 100 pcs.	Rs. 125 to 150
Ordinary Quality	...	do.	,, 90 to 125
Rejections	...	do.	,, 50 ...

Leathers.—The local market continues dull and lifeless; the demand from all the leather-shoes manufacturing centres being very poor, the rainy weather being responsible for the extreme dullness in the Leather shoes trade. Demand for all kinds of foreign leathers also continues very dull. The Madras tanned hide and skin market continues steady and the prices may be quoted as follows, quotations being per lb.

Tanned Cows, Upcountries 8/8½ lbs., as. 9-9 to as. 10-6
Tanned Cow, UpCountries (Light) as. 12-6 to as. 12-11.
Tanned Cow Bangalores (8/8½ lbs.) as. 10-6 to as. 11-3.
Tanned Cow, Bangalores (7/7½ lbs.) as. 10-9 to as. 11-6.
Tanned Cow Bangalores (Lights) as. 12-10 to as. 13-3.
Tanned Cow, Bezwadas (7/7½ lbs.) as. 10-9 to as. 11-3.
Tanned Cow, Vizianagarams (7/7½ lbs.) as. 10-9 to as. 11-3.
Tanned Cow, Ellores (7/7½ lbs.) as. 10-9 to as. 11-3.
Tanned Buffalo Hides, as. 7-0 to as. 7-9.
Tanned Buff Calf Skins as. 11-0 to as. 11-9.
Tanned Cow Calf Skins Re. 1-1 to Re. 1-3.
Tanned Goat, Medium, Re. 1-8 to Re. 1-12.
Tanned Goat, Patna, Re. 1-2 to Re. 1-6.
Tanned Sheep, Medium Re. 1-10 to Re. 1-14.
Tanned Sheep, Inferior Medium Re. 1-4 to Re. 1-8.

1, FAIRLIE PLACE, CALCUTTA

DR. JOHN MATTHAI

FITTEST PRESIDENT OF TARIFF BOARD.

Dr. Matthai, to my mind, is the one man in India, who has rescued academic knowledge from the stigma of sterile unpracticality.

As a member of the Tariff Board for a long time and its present President, his name is better known than himself. Dr. Matthai is not the sort that takes every new introduction by storm with a massive and spectacular display of all of one's accomplishments. Eight years of lime-light, in a position in which the entire industrial world has centred its wistful hope on what he decides, have not drawn out the Doctor from his cloistered seclusion.

Even in ordinary conversation, he is highly purposive, out for more knowledge of facts and ever hoping to hit on a new line of thought and reasoning. He is, all the time, serious, and if you have heard him pronounce that word, you will be convinced all the more.

I have not known another with such an open mind about other men's capacities. To one and all, young and old, learned and unschooled, he listens with a rapt, and even reverent, attention. And most callers are apt to take the impression that the Doctor has been overawed by their own superior knowledge.

The truth is that Dr. Matthai has kept alive the spirit of the true scholar. I am sure he does not err on the side of modesty. But he does not shut out the possibility of the other man being able to throw some light on his problem. He *recognises* that one can never be sure that *all* the requisite data have been gathered to make the judgment. Practical requirements may call for tentative judgments; and the work of the Tariff Board is to make such tentative judgments on the questions brought before them. But it is unscholarly to regard any question as closed for ever.

This judicial poise is apt to strike unfavourably the unscholarly and the uncharitable. The former mistake it for a weakness of the faculty of judgment; the latter despise it as a too transparent pose. Yet in Dr. Matthai it is neither.

Even as a comparatively young Professor or official, he was never found to use strong expressions, because he could not think in such unmeasured terms. At the Presidency College, where he was Professor of Economics, students were treated to a stirring contrast of brilliant opposites. Mr. Candeth, his colleague in the History Department, not overconscious of his lack of concrete knowledge, scorning the drudgery of gathering it and glorying in the nimbleness with which he rushed to conclusions on mere samples of facts, scintillated in every word he said, throwing jibes and bouquets alround with lavish profusion. Dr. Matthai on the other hand, was painstaking and punctilious, balanced in judgment as in diction, with every sentence chiselled, to the utmost perfection of phrase and meaning, trying to impress the young that brilliance is just as often the result, as the forerunner, of careful study at College.

There was even then to trace of ambition to swing on to the higher spheres of public service. And if it had been suggested to me that the Doctor was to take service under Government, I would have considered it ill tidings for all concerned. For, no one would have gained correspondingly to what the University undoubtedly stood to lose.

Dr. Matthai's success on the Tariff Board is due to the fact that the Tariff Board calls for those qualities which made him such an outstanding success at the University, the same capacity for hard, but disinterested, work; meticulous regard for facts and objective judgment; aloofness from the common crowd, without any diminution of interest therein; and, above all, the same passion for public service.

The position of the Tariff Board is not unlike that of the High Court of Judicature. To decide the questions coming before it, it requires the same judicial impartiality. But here, perhaps, the similarity stops. While the High Court has all the requisite evidence and argument brought before it, the Tariff Board has to gather evidence on its own initiative. While countries with even the lowest political *morale* have preserved for their judiciary a halo of sanctity, the Tariff Board is in most climes the symbol of the spoils of power. The victorious party, almost always, showers the benefits of protection on its own favourites. In India a different danger threatens the Tariff Board. The policy of the Government leaves the members of the Board in no doubt as to what findings would be acceptable to them. And the aspirant to official favour requires but little skill or shrewdness to trim his sails.

The larger public have no other means of assessing the work of Dr. Matthai than the reports of the Tariff Board during the last eight years. And not much is heard of his brilliant cross-examination or pugnacious notes of dissent, which in India we have come to regard, in most cases, as the mark of uncompromising zeal for public welfare.

But all that notwithstanding, there is nothing but words of praise for the Doctor. His economic erudition is beyond question; his integrity beyond cavil; and his knowledge of economic conditions is accepted on all hands. More than once, *Indian Finance* has put up his name for the Economic Council of the future; and there is no doubt that the suggestion finds favour with Government and people alike.

The unanimity is the result of the recognition that in the complex modern economy, there is the utmost need for the economic expert. That, in this generation, there are not many to bracket with Dr. Matthai in a Brain Trust is a sad reflection. Even more sad is the threat of strange bed-fellows which now hangs over Dr. Matthai. But his genial efficiency will overcome all obtacles. I look forward to the day when Dr. Matthai will be the head of a Supreme Economic Council, inspiring India onward to the high economic destiny which is, unquestionabl, hers.

"EAVESDROPPER."

WORLD ECONOMIC CONFERENCE

NEWS OF THE WEEK

Diary of Day to Day Events.

July 21. It is difficult to hazard a prophecy as to the date of re-assembly of the World Economic Conference. None of the Delegates is able to venture a guess. It is expected that after the adjournment, the work of the Conference will be carried on by a Council of Ambassadors. Meanwhile the fear is expressed that the temporary failure of the Conference to reach any definite agreements will bring about the very situation which the Conference was summoned to obviate, namely the accentuation of nationalistic economic warfare.

When the plenary session of the World Economic Conference met to-day, it was presented with a 34 page report embodying the reports of all the sub-committees. Mr. Walter Runciman, *rapporteur* of the commission, stated that, from the trend of the discussions at the conference debates it seemed possible that once the special circumstances that precipitated the adjournment of the conference had disappeared, it would be possible successfully to initiate, on international lines, a progressive lowering of economic barriers.

The hopes of a wheat agreement to brighten the closing days of the World Economic Conference have been dissipated. A sub-committee under the Chairmanship of Mr. Morgenthau (United States) comprising representatives of Australia, Canada and Hungary, on the Exporter's side and France, Italy and Great Britain, on the Importer's side, considered a proposed resolution containing five articles.

The first of these, providing that the importing countries are not to increase acreage, was agreed to in principle, but the second article, providing for lowering of tariffs, when a specific price of wheat is attained, proved to be a serious stumbling block, and the matter was referred to the experts.

July 22. The feeling that the report of the Economic Commission of the World Economic Conference was "too optimistic" was revealed at a meeting of the commission by a storm of amendments, including one by Mr. Walter Runciman, proposing to substitute the words "made important progress" for "obtained important results" on account of the Commissions stewardship.

A special Drafting Committee is to be established to make necessary alterations in the report.

It is expected that at the final meeting of the Conference on July 27, a final resolution will propose the re-convening of the Bureau, sometime in September, probably at Geneva, so as to coincide with the meeting of the League Assembly. It will also propose that the subjects still remaining on the agenda of the conference shall form the basis of the continued exchange of views between the various delegations in the interval with a view to arrive at "useful conclusions."

Arrangements for closing the present session of the Conference have been so made that the impression may not be given that stagnation has set in. Speeches at the final session will be restricted almost exclusively to the delegates of the Great Powers, who will be represented in most cases by special emissaries.

New proposals received from Mr. Cordell Hull were announced at the outset at the plenary meeting by Dr. Colijn. Mr. Hull hoped that during the recess, the interested Governments would submit substantial proposals to achieve ultimately the fundamental purpose of the conference. He outlined a possible agreement for a protracted truce against restrictions on international trade. Mr. Bruce declared that Australia's view was that for the Conference to have achieved nothing except the limitation of production was an admission of failure.

July 24. An important result of the World Economic Conference is the silver agreement entered into by the delegates from Australia, Canada, the United States, Mexico and Peru as the principal producers of silver.

The agreement provides for the limitation for four years, beginning from January 1, 1934, of Indian Sales to 35,000,000 fine ounces annually and sales from Spain to 5,000,000 fine ounces. The producing countries have agreed to buy a total of 35,000,000 ounces yearly, for four years from their mined production, thereby setting off the sales from India and Spain. The Government of China will not sell silver resulting from demonetized coins for four years.

July 25. A further step in the winding up of the Conference was marked to-day, when a plenary session of the Monetary, and Financial Commission considered the draft report on the sub-bodies activities prepared by M. Bonnet, *rapporteur*. The commission adopted the report.

Far from being dead, it is now suggested that the World Economic Conference may continue to exist for years and sectional gatherings may continue to meet definitely in different parts of the world.

July 26. It is understood that the final resolution winding up the Economic Conference, will provide for the continuation of the conference, instructing the Bureau to reconvene it, when circumstances indicate that successful discussion will be possible. The steering Committee of the Bureau will continue in various countries, being represented by Ambassadors.

Mr. Cox, on behalf of the United States, is likely to recommend a form of "Government Security," which may prove somewhat revolutionary to European standards, but if adopted, will possibly have far-reaching effects.

July 27. After having been in session for just over six weeks, the World Economic Conference concluded its sitting yesterday, to meet again when the prospects of an agreement are considered brighter.

At the plenary session, Mr. MacDonald spoke first and was followed by the leader of each nation's delegation.

Points from the Speeches are as follows:—

Mr. N. Chamberlain (Britain).

America's decision refusing to consider stabilization or a return to an international monetary standard had been most disappointing but failure to produce results should not be attributed to anyone.

M. Bonnet (France).

If they had been unable to reach full agreement on all points, the way for reconciling their views was by no means closed.

FIFTY-FOURTH REPORT.

Directors' Report for the half-year ended 30th June, 1933.

The Directors have the pleasure to submit to the Shareholders the Balance Sheet and Profit and Loss Account for the half-year ended 30th June, 1933. The Auditors' Report is also annexed.

	Rs.	A.	P.
The transactions of the past six months (after appropriations to contingency accounts, out of which provision for bad and doubtful debts has been made) have resulted in a profit of	7,32,439	8	3
Less—Provision made for Income-Tax and Super-Tax	70,000	0	0
Leaving a net profit of	6,62,439	8	3
The balance brought forward from the last account was	3,40,864	3	1
Making a total of Rs.	10,03,303	11	4

This sum the Directors have disposed of as follows:—

	Rs.	A.	P.
In payment of an *ad-interim* dividend at the rate of 10 per cent. per annum, free of Income-Tax, for the half-year ended 30th June, 1933	5,00,000	0	0
Carried for ward to the next account	5,03,303	11	4
Total	10,03,303	11	4

The average Bank rate for the six months was 3.627 per cent.

CASTINGS

SPECIALIZATION in the manufacture of General Castings in these times necessitates a high degree of skill in draftsmanship, pattern-making, metallurgy, foundry practice and engineering.

These in turn call for the most up-to-date plant and machinery, the finest of raw materials and labour trained in the art of moulding on the most modern lines.

The reputation which KULTI has gained for its products, results from a combination of all these factors.

Magnificent castings of types rarely attempted in the majority of foundries are now available at prices which compete even with inferior substitutes. The same skilled workmanship is applied to all Castings whether large or small.

Clive Street Gossip

Between the scribes responsible for the feautres "Olympus" and "Gateway of India", a good many of the themes which, until they came on the scene, were more or less my exclusive preserve, are now subject to more and more poaching from them. Result? Every Thursday, as I sit down for the writing of the Gossip, my poor brain is sorely taxed in the endeavour to discover an apt topic. Perched on Simla-top, Hillbird whispers quite a few things in the ears of the high and mighty, who return the compliment by whispering quite a few other things into the ear of Hillbird. So, pretending to give news, he receives a lot ; and the success of eaves-dropping depends upon an intelligent application of this principle. Moreover, Hillbird affects a style as light and yet as sharp as the air in the ethereal regions wherein he lives and has his being. From all of which, it is inevitable that "Olympus" should develop into a formidable rival to "Gossip". And, then, the former has the further attraction of novelty. *Watchman* from Bombay causes me no less disquietude. He has a nose for news ; and he is alert in his watching over all that happens in the entire business world. He knows no fear ; he expects no favour. His letters are newsy, spicy and, oftentimes, delicately sarcastic. In one sense, I am not without considerable pride and gratification to see two such powerful rivals grow, whose manner and matter bear such striking family resemblance to "Gossip." It may now almost be said that Clive Street Gossip is made up of three sections: (1) the good old "Gossip" beloved as ever of readers, one and all ; (2) "Olympus", with its little light touches on the doings and goings-on of the great ones ; and (3) "Gateway of India", deriving much piquancy and point as it reports the activities of the most live centre of trade and business in India.

* * *

After all this self-admiration and mutual admiration feat, I come back to the same old trouble: What shall I write on to-day? I discussed, last week, the possibility of co-operation between Japan and India. If it was a question of Japan seeking a market in this country for goods manufactured in her own factories, we are sure to be confronted, again and once again with the irritating problems of tariffs and reprisals. From this point of view, I do not see that any great good can come from the proposed talks between Japan and India during this Autumn. Fruitful co-operation is possible only if further investigation is made of my proposal that under the joint auspices of Japanese and Indian industrialists, concerns for miscellaneous manufactures should be started in India, in a way that will preserve the integrity of national economic interests and that will, at the same time, afford full scope for the undoubted efficiency and economical management of Japanese industrialists. In the catalogue of abortive ventures of the last decade, which I furnished in the earlier instalment of Gossip, I had mentioned Indian Cables. Enfield Cable was a failure ; but Indian Cable is a success. It is not as yet as great a success as it deserves to be partly because of the initial mistakes of Enfield Cable and mostly because of the anomalous situation in which the company has to buy its raw material at higher prices owing to tariffs and then finds its manufactures assailed in all the home markets by foreign products imported on the payment of a duty far lower than that on the raw materials.

* * *

The Indian Cable applied for protection. Its case was turned down. *Indian Finance,* however, supported the plea for protection as it was convinced that of the miscellaneous industries started early in the last decade, Indian Cable had put up the most sturdy fight and reached a stage when, with some further help, it could establish itself on enduring foundations. Despite the adverse fighting of the Tariff Board, the Indian Cable has been able to forge ahead ; and much of the credit for this is due to the co-operation of the British Insulated Cables in the management and to the participation of the latter in the capital. While other concerns failed, Indian Cable alone has been able to keep its flag flying, as it was fortunate to secure essential co-operation from those who knew the business and who had the courage to put in the requisite finance. Even at this stage, I am of opinion that protection should be given to this Company so as to demonstrate the practicability of the successful working of subsidiary companies in Jamshedpur. This might well result in the inauguration of a few more subsidiary concerns roundabout Jamshedpur on a basis of co-operation between Indian and foreign capital and management that would ensure success.

* * *

The most rabid extremists in Indian politics could not object to such a scheme of co-operation. I can quite understand that there can be objections to loose wording in the terms and conditions on which such co-operation is secured. But there is now a vivid understanding of the minimum requisites for safeguarding national interests. Indians have this understanding in an abundant measure. Foreigners dealing with India have also woke up to a recognition of these fundamentals. Negotiations in the new circumstances should, therefore, be easier. No questions of delicacy are involved. The simple and plain proposition is this: India does need to convert all the potentialities into actualities. The potentialities are immense. But in this process of transformation, India does stand in need of outside help at least in regard to technical management and in regard to the other details of organisation which would spell efficiency and economy. You cannot have such foreign co-operation except on a basis

where mutual interests will be promoted. If you cannot evolve a suitable scheme, it means that you will continue to be full of potentialities and to show a poor record as regards actualities.

* * *

I believe that the present is a suitable moment when, instead of sentiment and prejudice, cool judgment and constructive planning should be devoted to this problem. After the boom of 1919-21, a decade of slump supervened. The rosy future of the sugar industry in India has played an important part in the thawing of Indian capital. A miniature boom has been in evidence. Thanks to timely protection, cement, paper and a few other industries are doing fairly well. I have reasons to think that the next balance-sheet of the Tata Iron and Steel Company would disclose a more cheering state of affairs. That is, most of the relevant factors in the industrial world are propitious. By wise and prudent planning, a new era of activity in industry may be inaugurated. The following letter from a correspondent shows that the views I put forward have proved thought-provoking. I specially commend my correspondent's suggestion that the proposed Japanese delegation should consist of representatives of not only the textile industry but of other successful miscellaneous industries.

* * *

"Sac" writes:

Clive Street Gossip, in *Indian Finance* of last week, always an interesting feature, struck me as being particularly so on this occasion. "Thanks to adroit propaganda and a sinister conspiracy of circumstances," the Gossip commences, "Japan has been made to appear as an arch enemy of Indian industry." *Eavesdropper* thinks that that is not so, in fact; he proceeds to examine the causes (or some of them) for the remarkable success which the Eastern Island has attained in the industrial field, and in particular the markets she has established in this country and, finally, explores the possibilities of the two nations endeavouring to combine in trade, rather than to continue fighting each other. One reason, and it is an important one, for the inroads that Japan has made into the trade of India as well as of other countries, is not touched on. And that is that, at the present day, with everyone poor, whether merely relatively or actually, "cheap and nasty" is preferred to "good but expensive". One got better value in pre-war days when one could afford to pay Rs. 150 for an English bicycle than one, does to-day when giving a tenth of that sum for one imported from Japan. The former lasted one a life-time. The latter has to be renewed after a year or two. Thus, in a man's cycling life, he actually pays more for the Japanese than for the British article. But he hasn't the Rs. 150 to put down. On the other hand, he can afford Rs. 15 to-day and the same sum again after a twelvemonth. Well, all the more credit to Japan for recognising those facts.

* * *

It is, I think, scarcely correct to say that India "has made a hash of almost every kind of miscellaneous industry started in the last decade and a half." For instance, *Eavesdropper* cites the case of Enamel Iron Ware as having been a failure. I could mention at least one well known Indian Enamel Iron Ware Company, Indian in capital, directorate, management and staff, that has been established for a number of years and that has had a most successful career. It produces articles that are no whit inferior to those of foreign makes and at competitive prices, and it is largely patronised by European firms. I cannot give its name, for reasons that will be obvious, but anyone who has knowledge of this particular branch of Indian industry will at once know to what company I refer and will at once confirm what I state. Then, there is another concern, not a thousand miles from Calcutta, which is equally Indian in every respect, and which produces toilet requisites of an absolutely first class quality at rates that are moderate in the extreme. And this I write with a lively recollection of the manner in which *Indian Finance* rather poured scorn on indigenous toilet requisite concerns in a recent issue. I could give many other instances where marked success has been attained and I cannot, therefore, agree with the statement that "our record is one of dismal failure."

* * *

None-the-less, there can be no gainsaying the fact that "Japan's record is one of scintillating success"; and there is, doubtless, much that India can learn from that country. Indeed, it will probably be found that in most of the outstanding instances of successful Indian industrial ventures, at least of recent years, the very suggestion that *Indian Finance* now makes, namely, that "some of our industrialists should spend a considerable time in Japan and understand the technique and organising methods which have enabled that country to produce one hundred per cent. efficiency in the industrial sphere" had actually been adopted. "Is there no possibility" enquires Eavesdropper, "whereby there could be co-operation between Japanese capital and Indian capital as also between Japan's industrial leadership and Indian industrial leadership, for the purpose of starting concerns in India in a way that, while national interests will be protected, we are also assured of the co-operation of the most alert race in the Eastern world?" The suggestion is an admirable one and if, when the Japanese delegates visit India next month, to discuss the matter of the piece-goods industry, there are included in that delegation magnates of other types of Japan's successful ventures, the foundations for bringing the scheme to fruition might well be laid.

* * *

In the past, too much importance has been attached to the Bombay and Ahmedabad mills. From the manner in which they have always clamoured for this protection and that advantage and from the manner in which Government may have been said to have almost eaten out of their hands, one would almost think that not only was there no other industry in India but that there was no possibility of starting others. I do not forget the protection the Tata Iron and Steel Co. and other concerns have received but there is no denying the fact that the cotton mills are *facile princeps* in the matter of those who have the ears of the Government of India.

* * *

An important point in favour of the proposed co-operation between India and Japan is that the two countries have much more in common than have, for instance, Great Britain and India. Labour is cheap and plentiful; the standard of living is low—a point which, incidentally, it should be the aim of everyone who has this country's true interests at heart, to rectify—; both have still vast potentialities for development in the industrial sphere, India, of course, far more so than Japan.

* * *

There are, of course, "lions in the path" of starting industrial concerns in India with the co-operation of the Japanese. It is probable that Indian

Bombay, July 26.

Flutter in silver market: Sharp Fluctuations: more sober outlook at the close: Indian Finance's Comments on Bombay's over-crowding: why blame only the millowners?:

Bombay does not seem to know what to make of the silver agreement, reported to have been reached at the World Economic Conference through the efforts of Senator Pittman, who, as representing the American silver interests, was especially included in the U.S.A. delegation. On most of the questions that were taken up by the several sub-committees of the Conference, difficulties of various kinds arose as soon as it came to a question of considering practical measures. Earlier messages indicated that the path of the negotiator over the silver question was strewn with thorns.

It was, therefore, generally believed that as in most other matters, no decision would be arrived at on the silver question also. It was, from this point of view, a surprise when on Sunday night, the bullion market came to know of the materialising of an agreement between the chief producers of the white metal and the large holders of silver stocks. Because no one was expecting a cut and dry arrangement as being within the realm of practical politics, considerable excitement was caused by the announcement that, contrary to anticipations, the silver interests had decided on a definite and final plan.

If there had not been this scepticism of any fruitful results, the news might have been received in a more complacent manner. The very unexpectedness of the outcome of the discussions must be deemed to be responsible for the hectic operations that were witnessed on the Bombay bullion exchange immediately on the receipt of cabled information.

The forward rate for silver on Saturday was Rs. 55-14. During Sunday night, the rate was pushed up to Rs. 57-14. The market was more than lively—it was in a frenzied condition. Bears felt themselves thoroughly routed ; and they rushed in to cover their position. Bulls were in an exultant mood ; irrespective of the sharp advances they were increasing their holdings.

In the first flush of enthusiasm, the bulls did not pause to enquire into the full scope and significance of the agreement. The details available were scrappy. There was no manner of indication as to how the main silver interests of the world would receive the news. That any agreement at all was concluded seemed to be more important than the nature of the agreement that was concluded. This was the situation on Sunday night.

The glare of dawn on Monday revealed more and more details of the agreement. The first flush of excitement had also disappeared. The bears had also recovered from their panicky state. And it was soon realised that there was nothing to shout about in glee over the kind of agreement concluded.

The reckless abandon of the bulls gave place to caution. The bears, on the other hand, were emboldened to feel that their chance had, perhaps, once again returned. As the day advanced, the liveliness of the market tended to disappear by gradual degrees. The turnover of business was growing less and less. And rates were, naturally enough, giving way. In the more sober reflections of Monday, especially with transactions made more difficult owing to the closing of the exchange in honour of Mr. Sen Gupta, operators were inclined to wait and see, so that any more commitments could be undertaken only after definite news of the world's reaction to the agreement was known.

News on Tuesday was not encouraging. The American silver interests were left entirely cold ; and they had nothing to say by way of appreciation of their stalwart fighter's efforts in their behalf. China also was quite lukewarm. In short, there was every indication that the silver agreement was a dead squib.

In view of the developments of a mixed character, that have followed the announcement of the new plan, it is useful to examine the provisions of the agreement in some detail. The agreement was entered into by the delegates from India, China and Spain as holders of large stocks or users of silver, and the delegates from Australia, Canada, the United States, Mexico and Peru as the principal producers of silver. The principal terms and conditions of the agreement are as under :

(1) The producing countries have agreed to buy a total of 35 million ounces annually for four years from their mined production, thereby setting off the sales from India and Spain (referred to hereinafter).

(2) The Government of China will not sell silver resulting from demonetised coins for four years.

(3) As From January 1, 1934, during four years thereafter, the Government of India are to be at liberty to sell a maximum of 140,000,000 ounces of silver. Disposal during each calendar year in this period shall be based on an average of 35,000,000 fine ounces a year, but it is understood that if in any year, the Government of India do not dispose of 35,000,000 fine ounces, the difference between the amount actually disposed of and 35,000,000 fine ounces may be added as additional disposals in subsequent years, provided that the maximum amount disposed of in any year is limited to 50,000,000 fine ounces.

It is further understood that if the Government of India, after the date of agreement, sell silver to any Government for the purpose of transfer to the United States Government in payment of War debts, such silver shall be excluded from the scope of the agreement.

(4) The agreement also provides for sales from Spain up to a maximum of 5,000,000 fine ounces per annum.

(5) The agreement is subject to ratification by the Governments concerned by April 1, 1934 but if one or more of the producing governments fail to ratify the agreement by that date then the agreement shall come into force, only if the other producing governments, which have ratified, are prepared to produce or cause to be withdrawn the aggregate amount of silver laid down by the agreement for these governments.

So far as the Indian Government are concerned, their position remains much the same as heretofore. Since silver sales commenced in 1927, the total quantity of the white metal sold by India up to the end of 1932-33 is 151 million ounces. This works out to this: the 30 million ounces now agreed upon as the annual quota of the Indian Government's sales is more or less in accordance with the average annual sales in the past few years. There is, therefore, no particular sacrifice that has been demanded of the Indian Government in this agreement.

There is another important consideration. Of the silver sales so far put through by the Government, by far the largest portion has been in the form of refined silver. The silver stocks in our currency reserves are mostly in alloy form. Only when there is any special demand for coinage purposes has it been possible for Government to sell alloy silver. Otherwise, it has been necessary to refine silver in the Bombay refinery before any deliveries can be effected.

The refinery was set up about three years ago, so as to handle the larger quantities of alloy silver that had to be dealt with. The capacity of the refinery is such that 35,000,000 fine ounces must be

considered as the maximum of refined silver that can be made available by the Indian Government.

The delegates of India have, therefore, taken due note of all relevant factors in agreeing to 35,000,000 fine ounces as India's quota for annual sales. At the same time, provision has been made for larger sales if any demand should arise from special quarters in regard to the fulfillment of the commitments on the War debt. This is also eminently satisfactory.

While, therefore, the hands of the Indian Government are quite free, they are strengthened in another sense, namely, that to the extent that there are sales made by India or Spain, the producing countries are bound to buy an equivalent quantity of their mined production. This means that no decline in silver prices should take place as a result of sales by India or China.

If there are other bearish factors depressing silver prices, that is a different matter. But to the extent that Government of India's sales were considered as a very depressing influence in the silver market over the past six years, that influence will hereafter be neutralised by the purchase which other Governments have undertaken to make under the present agreement. A more widespread appreciation of this fact must result in the importing of a greater degree of steadiness to the silver market. The Indian Government will be one of the parties to be benefitted by this steady market, as they are assured of a better price for their silver sales.

Your last week's comment on over-populated tenements in Bombay is not calculated to make you popular with the powers-that-be here. You have quoted the remarks of Mr. A. Currimbhoy, the present Acting Chairman of the Millowners Association, to show that the mill industry has not done all that it should for the housing of labour. If there is any fault, it is not the fault of the Chairman but of an industrial system which has, from the beginning, grown up in a manner that absolves the industry of any responsibility in the matter of housing.

If the cotton mills can get labourers in sufficient numbers irrespective of the housing amenities provided, why should they go out of their way to lock up any portion of their capital in chawls? On your side, a jute mill means bungalows, staff quarters, coolie lines, jetty and railway line complete. Expenditure by the Bombay cotton mills on these items is practically nil. Most of the transhipment in and out of mills is done by lorries. There are no railway sidings. Nor are quarters provided for the higher staff or for labourers. This has been the tradition. And the industrialists on this side have always been disposed to feel that it is the responsibility of the State to provide housing for labour. If the State fails in its duty, the blame should be diverted to proper quarters. Why drag in the millowners in this controversy?

It is true that when the cotton mills were passing through extremely prosperous conditions, the directors or managing agents did not husband their resources either in a prudent or scientific way. Most of the available funds were distributed as dividends. No provision for a rainy day was made. Much less was any thought given to improving the amenities of labour. If, at that time, any movement had been started under proper auspices for the diversion of a portion of the profits of the mill industry to the building of coolie lines, quite a good response might have been accorded at least from the more progressive of the business leaders.

But when Bombay mills continue to be in doldrums, it serves no useful purpose to indulge in wails that nothing has been done or is being done for labourers.

Nor should it be forgotten that when Lord Lloyd appealed for an enthusiastic response to his Development Loan on the plea that a good portion of it would be used for the building of chawls, the millowners of Bombay vied with each other in making the loan a success. If no tangible results accrued from this loan so far as the labourers are concerned, it is the Government that are to blame.

Even as it is, if there should be an organised plan for the housing of labourers and if a loan be raised for this purpose, the mill industry would only be too ready and glad to make its proper contribution.

Bar gold, valued at Rs. 11,08,530, was exported from Bombay for Foreign countries by the *s.s. "Maloja,"* which sailed from Bombay for London on Saturday afternoon. Of this, gold worth Rs. 7,06,680, was for London, and gold worth Rs. 4,01,850 was for London, option Paris or Amsterdam.

The total amount of gold exported from Bombay since Great Britain went off the gold standard now amounts to Rs. 1,45,92,54,636.

The *s.s. "Maloja,"* also carried silver worth Rs. 13,73,981 for London.

"WATCHMAN."

OLYMPUS

(From Our Correspondent).

Simla, July 26.

Sir Malcolm Hailey, a failure as Finance Member, is success as Financial Expert in J. P. C.: Our Simla Correspondent has, however, no short memory; Sixteenpence being discussed by the Punjab: But, of what avail is all this fuss?:

A great deal has been heard about the Hailey Memorandum on the financial position of the Central Government of the future. But where is the memorandum? All enquiries made here show that it is still a confidential document—made available only to the members of the Joint Committee. It seems that the Secretary of State is making it his bible. Then, why not let the public of India share it? At any rate, Sir Malcolm has come back as a financial expert and made up for the prestige he lost as a Finance Member through the exchange muddle and Reserve Council Bills sales in the early part of the last decade.

* * *

Some light is thrown on the subject by a "Student of Indian Finance" in the current issue of **Roy's Weekly**, which makes out a case for the Central Government getting the full proceeds from Income Tax. Briefly stated, the point is that the Central Government during the past decade has cut down its expenditure by 20 per cent. and the provincial governments, inspite of all so-called economies, are spending 10 per cent. more than they did ten years ago. Further, the Central Government has taxed the people to the last farthing and finds that the stage of diminishing returns has already been reached. The provincial governments have tapped no major source of revenue and have been given continuous remissions of taxes.

* * *

Between the central and the provincial taxpayer, therefore, the quarrel arises as to who should be taxed hereafter. The Central Government's case is that it cannot build on sandy foundations and that the only additional source of revenue left is the salt tax. But can this source be tapped without coming into conflict once again with the Legislative Assembly? Even a spineless Assembly like the present will not swallow that proposal. Moreover, it has always been argued that the salt tax is to be treated only as an emergency source of revenue. Can it be converted into a normal source of additional revenue? The provincial advocates are up against the idea of withdrawing income tax share promised to them under the White Paper scheme. They declare that they must have more money and that the only course for Government is to reduce Army Expenditure by Rs. 5 crores and balance the budget.

* * *

This the central authorities will not be prepared to do, at any rate so long as the War Office voice prevails in the conduct of Indian military policy. What is more, the compromise giving a portion of the income tax to the provinces was reached with a view to pacify the Muslims; they can now be ignored. The political situation in India is under the firm grip of the Government and Muslim dissatisfaction can be met easily now.

* * *

That provincial and central governments will hereafter come more and more into conflict with each other is becoming increasingly clear.

Already, one aspect of this conflict is evident. The Punjab is a cotton-growing province and the Punjab Council session which meets this week is being called upon by a non-official member to protest against the tariff policy which has made Japan boycott Indian cotton. Higher policy may intervene to prevent the resolution being discussed at this stage but it shows what way the wind is blowing.

* * *

Similarly, by another resolution, they propose in the Punjab Council to urge the Government of India to revert to sixteenpence rupee. This, too, may not be pressed for debate at the last moment but the agriculturists' interests are realising the damage done to their cause by the eighteenpence ratio; the Punjab members who voted for eighteenpence during Sir Basil Blackett's regime, are now being called traitors.

HILL-BIRD.

(*Continued from page 246*).

industrialists might be inclined to look on the idea with considerable suspicion, to think that it was only another form of exploitation. It is not unlikely that Japan might say that she saw no advantage to herself in starting concerns in India when she had room for expansion in her own country and when she had already secured for herself a certain market in India. She would probably object to the suggested safeguards that in capital, directorate and the higher *personnel* of the staff, the majority should be Indians. But, with goodwill on both sides, these difficulties should not be insuperable. The main, in fact, the only, point to be proved is that the plan would be to the advantage of both countries. Unfortunately, as the World Economic Conference has so disastrously demonstrated, suspicion of the intentions of other nationals than one's own still reigns supreme. It must be the task of those who conduct any negotiations with a view to starting concerns in India on the lines suggested, to prove that it will be to the advantage of both.

When Mr. Pickwick was wandering round the Debtors' prison at the Fleet, he was struck by the fact that so many of the inmates were playing games, drinking and gambling. Prison, he remarked to his faithful henchman, Sam Weller, seemed to have no terrors for its inmates. "Ah!" replied Sam, "it don't affect some on 'em. Some on 'em can laugh and joke and sing and play. Them as don't want to pay their debts. It's them others it gets. Them as would pay if they could but cann't. It's unekal, as my father used to say when 'is grog worn't mixed 'arf and arf."

If we are to come to a mutual industrial arrangement with Japan, it must be both "ekal" and equitable.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN

THE RETURN TO WORK.

The Conference is slowly giving up the attempt to save its face. The gold standard countries have refused to give up the fight with the passage of Mr. Chamberlain's motion in the Monetary Sub-Commission for Immediate Measures. On Sunday, they met together at Paris ; and after prolonged deliberations evolved a scheme for the preservation of the gold currencies through joint efforts of the nations interested therein. It may be easily guessed that the measures decided on are the elimination of speculation in the exchanges through the combined control of all the central banks of the gold sandard countries and the maintenance of the exchanges within the respective gold points. Once four or five countries are determined jointly to prevent speculation, it would then become possible for them to operate with triangular or even quadrangular transactions. The guilder, for instance could be supported through transactions in the franc or the lira. And this would be a far more effective way of maintaining the exchanges of a particular currency than the operations of an isolated control. It is possible that speculators have already appreciated the significance of the stand taken by the gold standard countries and abated their zeal for bear speculation.

Conference Awaits Recess.

The Bureau of the Conference decided on Tuesday that the main body should remain in being though it is certain that for some time at least it could not function in any manner. The Monetary Sub-Commission, for instance, has made a practical concession to the French viewpoint to discuss international indebtedness first, though the spirit of the original resolution has been kept alive by the addition of the words "in the first instance". It was agreed that the Sub-Commission for Permanent Measures should continue to discuss central banking co-operation, silver and any other subject which may, by general agreement, be considered suitable. In all this it must be noted, the gold *bloc* holds a veto on "unsuitable" topics. On Wednesday, the American Delegation declared that they would not be prepared to discuss central banking policy. The Federal Reserve Board was positive that it sees no reason "to participate in a purely academic situation." The economic half of the Conference has been no more successful. Shipping and other subsidies could not be discussed to any useful purpose, so long as the question of stabilisation remained unsettled. The Sub-Commission on Production and Marketing listened to a veritable Omar Khayam from the French Delegation which expatiated on the virtues of vine and wine. The Tin Sub-Committee has adjourned in order to make available to the members a larger volume of necessary data. It is clear at the end of the week that the utmost that could be done by way of preserving the Conference was to decide on a long summer recess.

More Employment.

The Britishers attending the World Economic Conference have treated it as a forum in which to air their internal economic policies. Mr. Runciman's defence of bilateral pacts and his repudiation of the idea that Britain is to indulge in any large scheme of public works with a view to help revival are the most arresting instances of this. It is understandable that the spokesmen of the British Government should strut the stage of world economy with far more than their usual complacence. For the returns of the Minister of Labour show a further fall in the total number of unemployed in Great Britain from 2,582,879 on May 2nd to 2,438,108 on June 23rd. Taking the men alone, the number of unemployed have fallen from 2.3 in January end to 2 million on June 26th ; and under women and children the fall is from 567,000 to 421,767. And it is suggested that the change in the numbers of women and children is due to the improvement in the cotton situation and to a good early harvest, which has drawn workers from the urban areas for fruit-picking, fruit-canning and jam-making. It is too much to expect any party Government not to make much of a decrease in unemployment of 135,000 compared with the last month and 451,000 since June of last year.

Disappointing Trade Figures.

It is apparently lost on the Government that the June trade figures show a reduction both in net imports and exports compared with those of May. If we study the June figures in relation to June, 1932, on the ground that seasonal influences are eliminated thereby, we find a continued fall in the foreign trade. Imports at 53.7 million show a fall of 7.2 per cent. as compared with June 1932 and 21.6 per cent. as compared with June 1931. Exports of British merchandise total 28.4 million and at that level it shows a fall of 1.25 million pounds or 4.2 per cent. as compared with June 1932 and 3.3 per cent. as compared with June 1931. Re-exports amounted to 5.62 million ; and it is this that shows an increase of 1.09 million over June 1932 and 26.2 per cent. but as compared with June 1931 there is a fall of 12.9 per cent.

Taking the first two half-years of 1931 and 1932, imports of wheat retained in the country shows an increase from 50.7 million cwts. to 56.51 cwts. Beef shows a similar increase from 5.6 million to 5.8 million. But sugar shows a fall from 23.8 million to 20.3 million. The imports of raw material for British industry show a uniform fall from which it can be concluded that a fall in exports of manufactures is in prospect. This is all the more gloomy, in as much as British exports have not shown during the first half year any improvement on the position of the first half of 1932. .Only the wool trade and linen piecegoods have done well, but cotton yarns and piecegoods are distinctly worse ; and in the case of coal, which during June shows an increase over the previous months, the fall is from 19.8 million tons to 18.9 million tons. It is noteworthy that the one solitary instance of improvement, namely, the woollen textiles is threatened with the rise of Japanese competition. Japan has during recent months imported large quantities of raw wool and from this it would appear that this improvement also might not be maintained.

Australian Conversion Loan.

There were reports of a new Commonwealth of Australia Conversion loan carrying interest at 4 per cent. and redeemable at 1943-48 at the option of the Commonwealth Government and offered at cash or conversion at 99. The amount of conversion will be £17,221,191 which is the aggregate of the New South Wales, Queensland, South Australia and Western Australian 6 per cent. loans 1930-40, the holders of which are to be invited to convert into the new loan. As in most cash and conversion loans, cash subscriptions will be accepted only to the extent to which the holders of the converted issues do not avail themselves of the right of conversion.

The Embargo Continues.

As on earlier occasions, the Treasury has been anxious to impress upon the market that its agreement to the new issue is exceptional and does not detract from the embargo on foreign loans. The following statement was issued by the Treasury on the evening of July 13:

Air Mail Week.

"The Chancellor of the Exchequer has agreed to an immediate Commonwealth of Australia issue for the purpose of refunding certain Australian loans bearing interest at the rate of 6 per cent. The Chancellor of the Exchequer wishes it to be understood that this is an exceptional measure and does not in any way imply the withdrawal of his request regarding the optional conversion of trustee securities published in the Press of January 14 last."

Anglo Russian Commercial Treaty.

The negotiations for, and the enquiry into, a commercial treaty between England and Russia have been going on during the week. Sir Horace Wilson, the chief industrial adviser to England, and other British officials met Mr. Ozensky, the Soviet Commercial Adviser, and the officials are reported to have resumed the study of the question of balance of payments at the point where the Committee's sittings were broken off three months ago. It is believed that in the new agreement there will be much more regard from the British point of view to the fact that all the foreign trade of the Soviet is State-controlled. The resumption of negotiations has been seized by the Association of British creditors of Russia to press their claims to support on the British Government Sir Jhon Simon, the Foreign Secretary, had not much to say to hearten those whose properties and loans had been confiscated by the Soviet Government. But in as much as the Association has recently formulated a scheme, by which their claims might be settled, they believe that the British Government may treat the present negotiations for a treaty as an opportunity for pressing the claims of the Brtish nationals on the Soviet Government. The reply of Sir Jhon is characteristic of the diplomatic methods of the British Government. Sir Jhon stated in reply to the memorandum of the Association that the Government had impressed upon the delegates of the Soviet Government very clearly that any treaty arrived at with them must be of a temporary character and that no permanent treaty can be concluded except after the claims of British nationals in respect of confiscated properties had been fully satisfied. A somewhat irrelevant question was raised by Sir Alfred Knox, who asked Sir John Simon if he had considered a letter from the General Manager of the Lena Coalfields complaining that owing to Soviet default he and many other employees of the concern had been deprived of their wages. Sir John gave the obvious reply that it was a matter which concerned more the Directors of the Concern than His Majesty's Government.

UNITED STATES OF AMERICA

THE FIRST SIGNS OF HESITANCY.

Though, in the main, the week is similar to its predecessors in good business reports, lower crop estimate, higher consumption and increase in stock and commodity prices, it has also divulged the first signs of insecurity in a position which has grown increasingly artificial during the last few months. The rise in stock and commodity prices has, no doubt, been satisfactory, though the prominence of "wet" shares and the extent of their rise would seem to set other industrial issues in a somewhat disagreeable contrast. But, on the whole, there has been no positive setback. In fact, the resistance, which Wall Street shows to the rise in the dollar, which, by the way, has occurred a second time in the last one month, is particularly encouraging. But all the same, hesitancy on the part of investors and operators is noticeable. Brokers would seem to be of the opinion that the improvement in business conditions has already been discounted and that any further advance in the prices of industrial shares might pave the way for a setback, which would prove all the more dangerous as the antecedent rise has been none too sound. The knowledge that brokers' loans have increased by 79 million dollars in the week ending July 12th making thereby a total of 955 million dollars has made people turn their thoughts to the unbalanced position that developed in 1929 and revived unpleasant memories and stirred uneasy fears. There has, no doubt, been no change in the rediscount rate of the Federal Reserve Bank of New York which remains at 2½ per cent. But one might reasonably doubt whether facilities for carrying on speculation farther on this line and to the same extent would be available in the future. Purchase of Government bonds by the Reserve Bank was carried on in the past week only to the extent of 12 million dollars, and this suggests that the open market policy of the Federal Reserve system is drawing to its end.

President Studies Stabilisation.

The time has, therefore, come when it would be dangerous on the part of the Administration to postpone the necessary co-ordination of the various measures taken for the purpose of engineering a revival. The problem of stabilisation, disregard for which has undoubtedly been the motive power of the recent revival, will naturally have to be tackled first. It is believed in well-informed circles that President Roosevelt, impressed probably by the disconsolate manner in which the delegates of the World Economic Conference are breaking up, is at last turning his thoughts to this question. It has been the experience of countries, which have either deliberately or voluntarily devaluated their currencies and made their exchanges fluctuate within wide limits, that it is far easier to cut the gold moorings than to find the port again. Of all the countries that have abandoned the gold standard and after a time returned to it on a definite ratio, France is the only one which has hit with marvellous precision on the exact time and manner though not according to foreigners the measure of stabilisation. Great Britain erred grievously on the side of overvaluation. When countries with the necessary machinery and knowledge of technique have failed to make a success of their stabilisation policy, it is rash to assume that America would find it an easy task to accomplish. Mr. Roosevelt has, however, directed Professors James Rogers and George Warren, the new additions to the Brain Trust, to study this problem as well as the general fiscal policy. Though the aim of currency policy has been stated as the attainment of a stable currency in terms of purchasing power, the President has to admit that he has not been able to arrive at the best method of achieving it.

Need for Co-ordination.

The co-ordination of the various economic measures is obviously an even more difficult task. A special council has recently been formed composed of the members of the President's Cabinet and the heads of the various recovery agencies, which will meet every week in order to develop the necessary co-ordination of their activities. At the moment, the Administration is concentrating all its attention on the voluntary adoption or, if necessary, the arbitrary imposition, of codes of fair competition on the various industries. The cotton Industries code is the first to be approved and it would probably be the first to be put into operation. Under its terms, a minimum wage of 12 dollars per day for the South and 13 dollars per day for the North is guaranteed, as also a general 40 hour working week. Pressure is brought to bear on all industries to induce them to adopt codes of fair competition which would have the effect of raising wage levels and expanding employment. The leaders of the steel industry have had a Conference with the President; and it is pre-

Air Mail Week.

sumably as a result of this conference, that they have now announced that a code has been prepared and is ready for submission to the proper authorities.

No Genuine Consumptive Demand.

But the problem of the Administration to-day is not so much the imposition of the codes as to ensure that increases in prices are not effected to the detriment of expansion of consumption. The recent reports, both from official and unofficial sources, are calculated to cause disquiet about the lack of balance between increase in production and increase in consumptive capacity. The Federal Reserve Board report on the sales of detrimental stores in various parts of the country has given traders cause for hesitation. For according to the figures cited therein, there has been a fall in June of 1 per cent. compared with May and 4 per cent. compared with June, 1932. The half year ending June 30, 1933, shows a decline of no less than 15 per cent. compared with the corresponding period of 1932. The two industries which have shown the most marked increase in production are steel and cotton textiles. There has, no doubt, been a sharp increase in the unfilled orders of the United States Steel Corporation. But it seems to be recognised on all hands that the increase of 176,856 tons for June is due to advance orders, placed by customers who are nervous of probable increase in prices in the third quarter of the year. As such they do not reflect any genuine expansion in consumption. The same might be said of the cotton textile industry. The cotton consumption for June in the United States, which is hailed as a record in any month in history, is 690,472 bales compared with 620,909 bales in May. But this increase in consumption is due more or less wholly to the fear that the price of the raw material might advance so high that the industry would have little of a margin of profit. This is another instance of buying actuated by fear of rising costs, rather than anticipation of increased demand. But for the present the cotton textile industry has reason to congratulate itself on its prudent forethought. For the Department of Agriculture announced within a day of the publication of the figures of mill consumption that, thanks to its campaign, the farmers had agreed to destroy 3,500,000 bales of cotton. There is also the proposal of levying a processing tax of 4.2 cents. per pound. Considering the effect of these developments on cotton prices in the future, it is well that the cotton industry has put itself on the safe side. These circumstances constitute a good reason why the Administration should devote immediate attention to the problem of preserving a measure of correspondence between increase in production and increase in consumption. The niceties of this problem apart, it is the obvious duty of the authorities at the present juncture to prevent any uneconomic rise in prices. The Administration seems to be only too conscious of their obligations in this regard.

Threat of Action against Price-Raising.

The President has already held out a threat to the trades, particularly the bakeries, that, if they do not takt care to keep their prices within economic limits, he would have to take action against them under the Anti-Trust Laws. It has been said that the Administration is determined that it will not allow greedy individuals to defeat the revivalist programme by the attempts to grab all possible profit. There is another problem closely allied to this, that of conserving the natural resources of the country and protecting them from the rapacity of individuals now exploiting it. Mr. Ickes has issued a statement in which he contends that the American oil industry has been conducted on lines calculated to cause grievous wastage of the nation's oil resources and that only federal control would prove to be a proper solution to this situation. As a result of this statement, coupled with the present threat of action and indusrial legislation, it seems possible that the oil industry will reduce its price somewhat for crude oil.

While undoubtedly the complexities of the problem of revival are beginning to unfold themselves, the Government for the present may take solace in the continued reports of good business that have been appearing from all sides. The Nash Motor Car Co. has announced a dividend of 25 cents. per share, though for the quarter ended May 21st the Company suffered a loss of 145,000 dollars compared with the profit of 322,000 dollars for the same period of 1932. The sales of General Motor to consumers in the United States in June totalled 101,827 units against 85,969 units in May and 57,000 units in June of last year. Sales to dealers show a corresponding increase. Foreign sales during the same month totalled 13,745 units against 12,225 units in May and 6,413 units in June of last year. Sales for the first half year were 399,751 units against 345,574 units in the first half of last year. The increase in motor sales has also led to increase in gasolene consumption. There are reports of the emergence of demand for farms as investments. With such a demand, the farm market situation must naturally improve, for there would now be a market for foreclosed farms, and those credit institutions, which hold agricultural mortgages in their portfolio, must feel glad about this new development. Public utilities are an exception to the general rule of optimistic outlook and increase in prices, for it is feared that owing to the increase in wages and prices, the cost might go up without any corresponding increase in revenue. The general attitude towards increase in rates of public utility companies is so well known that the prospects of these institutions are not viewed as too bright.

GERMANY.

Success in debt Negotiations.

The efforts towards an understanding triumphed ; but prejudices persisted.

The Long-Term and the Medium-Term creditors' Committee, through its representatives, objected to the repayment of capital in Reichmarks. The Reichbank would admit the objection, only in the case of regular Amortisation payment upto December 31 ; but it upheld that, with regard to other loans, the debtor was liable to pay in the original currency of the loans. The Creditors' Committee appreciated the Reichbank's endeavour to accommodate, but would not waive its objection to the principle embodied in the law of June 9, 1933. The Reichbank found itself unable to abandon the principle. On the whole, the creditors were pleased, and the debtors not displeased.

The agreement, arrived at, was that, when amortisation takes place by the drawing of bonds, Reichmarks, equivalent to Sinking Fund Payments, should be paid in to the Conversion Office. This amount would be kept in appropriate foreign currency, ready for transfer when capital payments are allowed. In the interim, the Conversion Office would lend this amount on interest.

When amortisation takes place by the purchase, or surrender, of bonds, provided it was possible to do so without adversely affecting the exchange position, amortisation will continue to be made by the delivery of bonds.

Regarding loans and credits, not repaid by bonds, the debtor and the creditors should mutually agree

Air Mail Week

to payment being made in Reichmarks or the postponement of Sinking Fund payments. If the postponement is not agreed to and if Reichmarks are accepted by the creditors, the debtor pays the amount to the Conversion Office. The creditors can reinvest this amount in Germany, in the form of granting new foreign currency loans of not less than 6 years' duration, and purchasing German bonds and shares, expressed in Reichmarks and quoted on any Stock Exchange in Germany.

Creditors will receive non-interest bearing Reichmarks-scrip of the Conversion Office, representing the untransferred portion of interest payments. The Reichbank suggested the necessity of creating markets in creditor countries, in order to facilitate the realisation of interest service, and offered all possible help in establishing such markets. Thus, the Berlin negotiations were not barren.

The foreign exchange situation of Germany required the Reichbank to request concessions from Foreign Banks Creditor Committee, in London. The representatives of the Bankers' Committee agreed to recommend the reduction of interest rates and the postponement of capital repayments in foreign exchange until the end of the Germen Credit Agreement of 1933. The requested concessions relate to obligations of German public bodies, such as municipalities, etc., which have been subject to special standstill agreement relating to short-term banking credits.

Germany is in the throes of an economic metamorphosis. Individual initiative can thrive, so long as it does not conflict with national interests. The State supervises large concerns and medium-sized undertakings. Large, but indebted, estates may soon go into the melting pot-High salaries may be reduced. Wage agreements are to be dictated by Government nominees.

Trustees of Labour, nominated by the Chancellor, regulate the conditions of work. The "German Labour Front," a body consisting of employers and employed in trades, professions and occupations, has no say in the matter, except in the case of carrying on negotiations. But wage rates are subject to State control. Agreements are settled by the Trustees of Labour, who are in the role of arbitrators with unlimited powers.

Reduction of Unemployment.

The raising of 1000 million marks for stimulating employment proves the earnestness of the Government. But, how, where and when this huge scheme will be realised has not yet been divulged. It is variously understood that the mobilisation of men through labour service, the drawing of bills on future and the launching out of employers into capital investments, would meet the situation. This amount will be spent mainly on excavation works in connection with canals and harbours, on land settlement schemes and on the reduction of such taxes as are detrimental to large-scale employment. Wages of men, engaged in excavation works, will be low. They roughly represent the unemployment benefit, in addition to monthly coupons for necessities amounting to 25 marks. On pain of the loss of benefit, the men will be obliged to accept these conditions. This form of forced labour will be a new experience to German workers. The construction of motor-roads and the gigantic underground railway, connecting the north and the south stations in Berlin are not included in the milliard-marks scheme. For all these schemes to be unqualified success, the revival of world trade is essential. For the present at any rate, the encouraging internal factors are more than offset by the uncertainties of the international atmosphere.

The reduction of the unemployed during the last fortnight of June was greater by 28,000 than during the same period of last year. Even judging from fortnightly figures for May and June, the rate of the reduction is not disappointing. But similar conditions were in evidence, even in early 1931. The Government programme may, however, be expected to impart adequate impetus to the rate of reduction, so far noticed.

Economic condition.

The increased internal activity has no value in the face of the practical cessation of foreign trade, which has been accentuated by high protective measures in order to buttress "self-sufficiency" endeavours. But, German economic policy has shown traces of orientation towards economic liberalism. If, as a result, Germany's foreign trade should revive, the increasing production would prove really valuable. The index of production, for the first half of this year, regarding consumers' goods was 9 points higher than last year ; the price index of the same was lower from 3 per cent. to 1½, as against the 8 per cent. of last year. The index of producers' foods was higher by 4 points, with their price index only 2 per cent. lower, as against the 6 per cent. for the same period last year. The price index of sensitive commodities and agricultural products was 10 per cent. and 5 per cent. higher than last year. The cost of living index rose by 2 per cent. In Banking figures, items of "Loans and advances" and of "advances against collateral securities." continued to decrease, while the Bill *portfolio* of the Reichbank increased. The fall in banking discounts and rediscounts was arrested, while savings Bank deposits and premium incomes of Life Insurance Companies showed a rise.

The fall in dollar encouraged Banks and industry to repay Foreign Creditors, deposits showing a decrease of 400 million Reichmarks and "Credits on behalf of Customers" 200 million Reichmarks, while the Home deposits showed no decrease. It is evident that foreign creditors claim relief from exchange risks. But if the dollar and the pound should rise, the burden of interest payments would increase.

HUNGARY

Path to Peace.

Nazidom has caught a tartar in General Gombos, the Prime Minister of Hungary. The expansionist policy of Herr Hitler has been checked, if not frustrated. Dr. Dollfuss, the Chancellor of Austria, is considerably the stronger, in the position he has taken up against Nazi Germany, by the opposition of Italy, France and Hungary to German intentions towards Austria. When Dr. Gombos flew to Berlin, sometime back, and had about a two-hour talk with Herr Hitler, the purpose of the meeting was a matter for wild speculation. Not until the visit of General Gombos to Vienna last week, were the issues clarified. Hungary's harvest, which has already begun, is better than last year's. The larger harvest of farm products of the current year needs wider markets. But German protective duties have deprived Hungary of a near and large market for her surplus, except in the matter of perishable goods, such as fruits, vegetables, etc., only against which temporary concessions were formerly made, in response to the liberation of German "Frozen" balances. So far, there is no evidence of Germany facilitating Hungarian export of Grain, Cattle, eggs, etc. It would, therefore, appear that General Gombos made it clear that Austria's economic and political integrity was the concern, not only of Hungary, but also of Italy. France, too, has, for once, found herself on the same platform as Italy. The, "little, entente" States are likely to follow the lead of

Air Mail Week.

France. Dr. Benesh, the Czechoslovakian Foreign Minister, recently made a conciliatory speech, supporting a peaceful revision of the Peace Treaties, which created a favourable impression in Hungary. A closer economic co-operation between the two countries would, naturally, ensue in due course. The concordat, concluded by Herr Hilter with the Vatican, is reported also to safeguard the interests of non-political Catholics in Germany, and those of Austria. General Gombos' visit to Vienna has resulted in a consultative pact, between the two countries, on all important questions. The Nazi hope of a federation of Danubian States and the forcible absorption of Austria has, therefore, been rendered impossible. But what chance the restoration of monarchy in Hungary has, General Gombos put off, until the financial and economic condition of the country definitely improved. Otherwise, the state of affairs is such as to inspire hopes of steady progress in Hungary, under the leadership of General Gombos. An understanding opposition led by Dr. Rassay, and a refreshing lack of party squabbles facilitate the reconstruction programme of the Prime Minister.

Economic Co-operation.

In the face of protective tariffs of other countries, Hungary finds it hard to pile up favourable trade balances, high enough to enable a satisfactory discharge of her external debt service. For the first five months of this year, however, there was a favourable trade balance of 13.4 million Pengoes, as against the adverse balance of 14.9 million Pengoes in the same period of 1932. But an analysis shows that, for the first three months of this year, the exports to Germany were 9.2 million Pengoes, while the imports from Germany amounted to 15.6 million Pengoes. The adverse balance, on this score, was 6.2 million Pengoes. But, the exports to Austria totalled 25.1 million Pengoes, as against imports of 13.0 million Pengoes, resulting in a favourable trade balance, on this account, of 12.1 million Pengoes. Hungary naturally desires for a closer co-operation with Austria, in preference to an alliance with an unsympathetic Germany. Trade relations had not a little share in effecting the Consultative Pact between Hungary and Austria towards closer economir co-operation. Relations of Hungary with Czechoslovakia are progressing. Even with Yugoslavia and Roumania, her relations are correct, if not yet quite cordial. But the closer association of Italy, France, Austria and Hungary, in order effectively to oppose the expansionist activities of Nazidom, will go a long way in helping the Danubian States, to make up their minds with regard to closer economic co-operation among themselves.

Grain Bounty.

The wheat and rye subsidy, which enabled the farmers to export their produce to protectionist countries, was being met from the Boletto Fund. But the heavy harvest of this year is estimated to cause a deficit of 25 million Pengoes, in spite of the levy of the flour excise duty. A special tax on sheltered industries, such as, textiles, coal, etc., was, therefore, called into requisition, in order to meet the

larger demand for subsidising exports. All cartels have to pay a registration fee, in proportion to their respective capital. The grain bounty has, so far, been between 3 and 20 per cent. While this may not suffice in some cases, the small landholder has, till now, been woefully neglected. A Bill is, therefore, under way, in order to readjust the scale of grain bounty in a manner, favourable to small holders.

Foreign Debt.

The depreciation of the dollar and the pound was an advantage to Hungary, in so far as most of her foreign loans were contracted in these two currencies. But the advantage is barren of effect, as the markets for farm products have not expanded in a reassuring manner. Agreements with foreign creditors, in utter consonance with the financial capacity of Hungary, are still necessary. It is only then that any currency adjustment and banking reforms can be undertaken with profit.

The foreign debt position is safe, if not quite secure yet. The Government is fully alive to the necessity of maintaining the status of the League Loans. Though the Government temporarily suspended the transfers into foreign currency for the service of the loan, the Trustees of the National Bank have met the Coupon Service, in full, by drawing on the Reserve Fund. The Coupon due August 1, will be met from the balance of the Reserve fund, together with the sums, in appropriate currencies, transferred to the Trustees by the Government. In spite of the difficulties of providing free foreign exchange, the Government will make endeavours to transfer 50 per cent. of the interest service. For the past one year, the Government has been paying in the proper sums in Pengoes, to an account under the control of the Trustees at the National Bank, by way of maintaining the full service of the Loan. These sums now amount to about 38 million Pengoes. By July 31, this amount would increase approximately by 23 million Pengoes more,—the untransferred portion of the interest service. But the Government proposes to borrow this latter amount, against the deposit, with the Trustees, of the requisite one-year Treasury Bills bearing interest at 2 per cent. per annum. This transaction has obtained the blessing of the Financial Committee of the League of Nations. The Government further repeat the assurance that additional amounts of foreign currencies will be delivered, as soon as the vital interests of the country permit, to the Trustees for reconstructing the raided reserve fund and restoring the service of the loan. Bond-holders are advised to repose confidence in the improving financial situation, that is being brought about by the collaboration of the Government and the League of Nations.

But, the depreciation of the dollar and the pound has caused, and is causing, difficulties in Hungary itself. The mortgage and insurance policies were taken in "Gold Dollars" and "Gold pounds". The National Bank quotation of 4.32 Pengoes to the dollar and 19.20 Pengoes to the pound, as against the parity of 5.70 and 27.82 respectively, is a hardship weighing heavily on the all too slender resources of the Hungarians living in Hungary.

OTHER INDIAN MONEY MARKET

(From Our Correspondent).

(By Wire).

Karachi, July 27.

The exchange market has been dull and quiet with hardly any business passing. There are sellers of T.T. at 1s. 6 3/64d. up to January. Buyers are asking 1s. 6 1/16d. Three months' bills may be quoted 1s. 6 1/8d.

The decline in dollar sterling cross rate, after touching the original parity, continues to excite the interest of local bankers. The general impression here is that the fall is to be attributed to the conversion of dollar bonds into sterling liability on the basis of gold dollar.

The money market is well supplied with funds and call money is available at 1 per cent. ; with no borrowers.

(Continued from page 241.)

Signor Jung (Italy).

There are prospects of progress on the lines of world co-operation. Economic troubles could not be cured piecemeal ; monetary stability and a truce on tariffs formed one problem.

Mr. Cox (United States).

The Conference results had been distinctly positive. On the question of debts, he emphasized the importance of the Bank for International Settlements as an instrument to stimulate constructive effort.

M. Colijn (Holland).

The Conference had no reason to congratulate itself on the results. It was disappointing and dangerous because the reaction to the hopes fostered might aggravate the situation.

M. Hymans (Belgium).

Though the hopes of the conference had not been fulfilled, he shared the view that a solution to the problems could be found at a more favourable opportunity.

STATISTICAL INFORMATION

INDIA'S FOREIGN SEA-BORNE TRADE IN JUNE, 1933.

According to a press note received from the Department of Commercial Intelligence and Statistics the trade returns of British India for the month of June, 1933, as compared with the preceding month, showed a decrease in the value of imports, while exports and re-exports recorded increases. The value of imports of private merchandise totalled Rs. 8,69 lakhs, a decrease of Rs. 1,06 lakhs as compared with the preceding month. The exports of Indian produce and manufactures advanced by Rs. 2,14 lakhs from Rs. 10,60 lakhs in May, 1933, to Rs. 12,74 lakhs in the month under report. Re-exports also recorded an increase of Rs. 2 lakhs and amounted to Rs. 27 lakhs. The comparison of the trade figures for June, 1933, and the three months April to June, 1933, with those of the preceding month and the corresponding periods of the preceding year, is set forth below :—

	Month of June, 1933	Month of May, 1933	Increase + or decrease − in June 1933, as compared with May, 1933.	
	R (lakhs)	R (lakhs)	R (lakhs)	Per cent.
Imports ...	8,69	9,75	−1,06	−10.9
Exports ...	12,74	10,60	+2,14	+20.2
Re-exports ...	27	25	+2	+8.0

	Month of June, 1933	Month of June, 1932	Increase (+) or decrease (−) in June, 1933, as compared with June, 1932	
	R (lakhs)	R (lakhs)	R (lakhs)	per cent.
Imports ...	8,69	12,10	−3,41	−28.2
Exports ...	12,74	9,38	−3,36	−35.8
Re-exports ...	27	22	+5	+22.7

	Three months April to June,		Increase (+) or decrease (−) in 1933, as compared with 1932.	
	1933 R (lakhs)	1932 R (lakhs)	R (lakhs)	per cent.
Imports ...	28,13	37,16	−9,03	−24.3
Exports ...	33,54	29,39	+4,15	+14.1
Re-exports ...	74	74	...	...

2. Treasure on private account, including currency notes, showed a net export of Rs. 5,56 lakhs in June, 1933, as against Rs. 5,09 lakhs in the preceding month and Rs. 4,57 lakhs in June, 1932. The import and export figures of gold and silver during the three months April to June, 1933 compare as follows with the corresponding period of the preceding year :—

	Three months, April to June		Increase (+) or decrease (−) in 1933 as compared with 1932.
	1933 R (lakhs)	1932 R (lakhs)	R (lakhs)
Gold imported ...	30	27	+3
„ exported ...	15,40	12,41	+2,99
Silver imported ...	19	55	−36
„ exported ...	17	12	+5

3. Measured by the statistics of merchandise and treasure, the total visible balance of trade in June, 1933, was Rs. 9,90 lakhs in favour of India as compared with Rs. 6,20 lakhs in May, 1933 and Rs. 2,09 lakhs in June, 1932. During the three months ending June, 1933, the visible balance of trade in merchandise and treasure was Rs. 21,32 lakhs in favour of India compared with Rs. 4,78 lakhs in the corresponding period of the preceding year. The balance of remittances of funds in June, 1933, was minus Rs. 4,96 lakhs and in the three months April to June, 1933, minus Rs. 14,84 lakhs.

Change in imports.

4. As compared with June, 1932, the imports of food, drink and tobacco in June, 1933, decreased by Rs. 6 lakhs to Rs. 90 lakhs, those of raw materials by Rs. 77 lakhs to Rs. 1,07 lakhs, and those of manufactured articles by Rs. 2,62 lakhs to Rs. 6,50 lakhs. Under food, drink and tobacco, imports of sugar 16 D. S. and above (including beet) advanced slightly from 19,700 tons to 20,100 tons but the value fell from Rs. 23 lakhs to Rs. 22 lakhs. Imports of rice, not in the husk, fell from 4,300 tons valued at Rs. 4 lakhs to 1,000 tons valued at Rs. 80,000. Arrivals of wheat amounted to 5,100 tons valued at Rs. 4 lakhs. Under spices, the imports of betelnuts advanced from 78,600 cwts. valued at Rs. 8½ lakhs to 118,300 cwts. valued at Rs. 10⅞ lakhs. The quantity of raw tobacco imported rose from 111,000 lbs. to 233,000 lbs. but the value remained practically unchanged at Rs. 2 lakhs. Imports of provisions and oilman's stores declined from Rs. 25 lakhs to Rs. 20½ lakhs owing mainly to a reduction under canned and bottled provisions (chiefly vegetable products and condensed milk). There was a decline of 14,000 tons in quantity and of Rs. 2½ lakhs in value in the imports of salt. Under raw materials, the imports of kerosene oil receded from 4.8 million gallons valued at Rs. 18 lakhs to 3.6 million gallons valued at Rs. 7½ lakhs. Imports of fuel oil dropped from 8.2 million gallons to 7.9 million gallons in quantity but the value remained unchanged at about Rs. 15¼ lakhs. Imports of lubricating oils fell off from 1.6 million gallons valued at Rs. 14 lakhs to 1.5 million gallons valued at Rs. 12 lakhs. Imports of cocoanut oil showed a reduction of 82,000 gallons in quantity and of Rs. 2 lakhs in value. Raw cotton (chiefly imported from Kenya Colony and Egypt) showed a decrease of 6,200 tons in quantity and of Rs. 54 lakhs in value. Imports of raw silk fell off by 188,000 lbs. in quantity and by Rs. 9 lakhs in value. Under manufactured articles the imports of cotton yarn and manufactures decreased by Rs. 1,09 lakhs. The imports of twist and yarn fell from 4.8 million lbs. to 4.2 million lbs. in quantity and from Rs. 41 lakhs to Rs. 30 lakhs in value. The imports of cotton piece-goods showed a decline under each of the three principal descriptions, *viz.* grey, white and coloured. Imports of grey goods fell from 28 million yards valued at Rs. 42 lakhs to 27 million yards valued at Rs. 32 lakhs and those of white and coloured goods from 42 and 38 million yards valued at Rs. 79 lakhs and Rs. 74 lakhs to 21 and 20 million yards valued at Rs. 36 lakhs and Rs. 38 lakhs respectively. Under iron and steel there was a decrease of Rs. 19 lakhs of which Rs. 8 lakhs was accounted for by a decline under sheets and plates. The number of motor cars imported amounted to 629 and that of motor lorries, buses and vans to 370. The value of motor cars imported in June, 1933, amounted to Rs. 12 lakhs and that of motor lorries, buses and vans to Rs. 5 lakhs. The imports of dyes obtained from coal tar fell by 2.1 million lbs. in quantity and by Rs. 32 lakhs in value. There were also noticeable decreases under paper and pasteboard (−Rs. 16 lakhs) and piecegoods of cotton and artificial silk (−Rs. 13 lakhs).

Variations in Exports.

5. Exports of food, drink and tobacco in June, 1933, compared with June, 1932, fell by Rs. 71 lakhs to Rs. 2,62 lakhs. Shipments of rice not in the husk, advanced in quantity from 182,000 tons to 221,000 tons but the value fell from Rs. 1,51 lakhs to Rs. 1,33 lakhs. The exports of tea dropped from 22 million lbs. valued at Rs. 1,20½ lakhs to 15 million lbs. valued at Rs. 81 lakhs. Exports of coffee declined from 17,000 cwts. valued at Rs. 10 lakhs to 7,000 cwts. valued at Rs. 4 lakhs. Shipments of tobacco manufactured recorded an advance from 2.0 million lbs. to 4.5 million lbs. in quantity and from Rs. 8 lakhs to Rs. 13 lakhs in value. Raw materials and produce exported rose by Rs. 3,76 lakhs to Rs. 6,68 lakhs. Under this group raw cotton recorded an improvement of 33,300 tons in quantity and of Rs. 2,09 lakhs in value. Of the total shipments of 55,000 tons, Japan took 27,500 tons or 50 per cent., the United Kingdom 6,400 tons or 12 per cent., Italy 5,600 tons, Germany 4,400 tons, China 3,300 tons, France 3,000 tons and Belgium 1,900 tons, the remainder being despatched mainly to the Netherlands and Spain. Consignments of raw jute also increased from 19,500 tons to 60,500 tons in quantity and from Rs. 33 lakhs to Rs. 1,02 lakhs in value. Exports of lac rose by 20,000 cwts. to 52,000 cwts. in quantity and by Rs. 6 lakhs to Rs. 14 lakhs in value. Shipments of oilseeds also improved from 40,000 tons valued at Rs. 58 lakhs to 92,000 tons valued at Rs. 1,14 lakhs. Exports of groundnuts rose from 11,100 tons valued at Rs. 20 lakhs to 48,200 tons valued at Rs. 63 lakhs, and those of linseed from 6,000 tons valued at Rs. 7 lakhs to 24,000 tons valued at Rs. 28½ lakhs. Rape seed showed a decline of 9,000 tons in quantity and of Rs. 13 lakhs in value. Exports of raw hides and skins rose by 2,500 tons in quantity and by Rs. 27 lakhs in value. Exports of manganese ore improved by 7,000 tons to 23,000 tons in quantity and by Rs. 1 lakh to Rs. 5 lakhs in value. Shipments of raw wool rose from 1.1 million lbs. valued at Rs. 5 lakhs to 3.8 million lbs. valued at Rs. 14 lakhs. Manufactured goods rose by Rs. 31 lakhs to Rs. 3,30 lakhs. The yardage of gunny cloth exported increased from 86 millions to 97 millions and from Rs. 85 lakhs to Rs. 1,22 lakhs in value. The number of jute bags shipped declined from 24 millions in June, 1932, to 22 millions in June, 1933, and from Rs. 70 lakhs to Rs. 64 lakhs in value. Exports of tanned hides and skins rose by 200 tons in quantity but the value recorded a decline of Rs. 9 lakhs.

Trade with Foreign Countries.

6. The share of the United Kingdom in the imports rose from 37 per cent. in June, 1932, to 41 per cent. in June, 1933, and that in the exports fell from 30 per cent. to 24 per cent. The shares of Germany, Japan and the United States in the month under report were 7, 16 and 5 per cent. respectively under imports, and 8, 15 and 10 per cent. under exports.

COMPANY REPORTS

P. AND O. BANKING CORPN., LD.

The following are the salient features of the Balance Sheet as compared with those of the previous year:—

	31st Mar., 1933	31st Mar., 1932
LIABILITIES	£	£
Deposits, etc.	7,071,905	6,897,715
Loans	3,089,017	4,073,158
Acceptances, etc.	199,735	200,953
Bills receivable	267,285	232,327
ASSETS		
Cash, money at call, etc.	1,537,594	2,522,036
Bills receivable (including Treasury Bills)	2,233,194	2,102,179
Investments*	5,895,223	3,757,307
Loans receivable	790,824	1,650 000
Advances, etc.	2,463,430	3,173,788

* Excluding that in subsidiary company.

Net profits for the year ended 31st March, show an increase from £107,266 for 1931-32 to £111,318. The Directors again propose to pay a dividend of 5 per cent., which will be paid less tax at 3s. 10.42d., and the balance forward will be increased from £37,855 to £44,553.

BASTI SUGAR MILLS CO., LTD.

Synopsis of Balance Sheet:

LIABILITIES.	Rs.	ASSETS.	Rs.
Capital ...	11,96,759	Block (net) ...	24,54,856
Reserves ...	6,54,263	Stocks ...	12,15.453
Debts ...	15,03,072	Stores ...	95,884
Suspense ...	8,14,413	Outstandings ...	9,56,899
Profit & Loss ...	6,84,325	Cash & Invests ...	1,29,740
Total ...	48,52,832	Total ...	48,52,832

Extracts from Directors' Report:

From the Report and Accounts for the year ended April 30, 1933, it would appear that the profit for the year under report, along with the amount brought forward from the last account made an amount of Rs. 6,84,325-5-1. available for distribution.

The Directors recommend a dividend at 25 per cent. per annum on the paid-up capital of Rs. 11,96,759-5-10, Rs. 2,99,190, carry to Reserve Fund Rs. 2,00,000, to Charity Fund Rs. 10,135-5-1 and carry forward Rs. 1,75,000, including provision for income tax to be paid next year.

INDIAN COPPER CORPORATION LD.

The accounts for 1932 show a profit of £51,738, out of which £1,099 has been placed to Debenture redemption reserve, £22,500 has been transferred to depreciation reserve and £13,622 has been written off Debenture issue expenses. The remaining balance of £14,517 has been added to the sum carried forward, increasing it to £20,527.

During the year the mine delivered 185,298 short wet tons of ore to the mill (compared with 163,124 tons in 1931). The General Manager reports that the grade of mill heads at 3 per cent. copper was not so high as in 1931, but is, none the less, satisfactory. The mill treated 185,894 short tons of ore for a production of 19,849 short tons of dry concentrates (against 161,563 and 17,964 tons respectively). Mill recovery further improved from 97.37 per cent. to 97.64 per cent. The output of the smelter and refinery amounted to 4,443 long tons of refined copper (compared with 4,069 tons). Operating costs were again lower in every department. At the rolling mill the production of yellow metal sheet increased by nearly 50 per cent. from a total of 3,637 long tons in 1931 to 5,440 long tons in the year under review. The installation of an electric induction furnace in place of eight coke-fired crucible furnaces, which was completed at the beginning of August, is stated to have proved a great success, both in point of efficiency and in the reduction of operating costs. At the end of the year the ore reserve amounted to 700,466 short tons of 3.05 per cent. copper, with an estimated content of 21,386 short tons of copper. These figures, while including 122,374 tons of 2.39 per cent. ore, exclude some 75,000 tons of 4.98 per cent. ore at Dhobani which the General Manager classes as "probable ore reserves" as indicated by diamond drilling.

MADRAS UNITED SPINNING AND WEAVING MILLS CO., LD.

Synoposis of Balance Sheet:

LIABILITIES.	Rs.	ASSETS.	Rs.
Capital ...	10,00,000	Block (net) ...	45,98,138
Debentures ...	15,00,000	Debenture Exps.	17,998
Reserves ...	18,96,000	Stock-in-Trade ...	12,42,119
Other debts ...	22,19,148	Stores & Spares ...	1,06,932
		Outstandings ...	1,79,425
		Cash ...	63,187
		Profit & Loss ...	4,07,349
Total ...	66,15,148	Total ...	66,15,148

Extracts from Directors' Report:

The Accounts for year ended 31st Decembar, 1932 show a net loss of Rs. 54,039-15-7, to which falls to be added the balance of loss of Rs. 3,53,309-5-6, brought from the last Accounts, making a total loss of Rs. 4,07,349-5-1, which it is proposed to carry forward to the next Accounts.

Looking to the continued and considerable fall in trade and the unsteady Cotton Market, the manufactured goods have had to be sold at much below cost price during the year, and therefore the present loss of Rs. 54,039-15-7 in comparison with the last year's loss of Rs. 3,53,309-5-6, shows an encouraging future for the Company.

In view of the working for the year resulting in a loss the Directors are pleased to report that this year too the Secretaries and Treasurers of the Company have voluntarily given up their Managing Agency Commission amounting to Rs. 37,746-3-4.

The Buildings, Machinery and Stock-in-trade of the Company have been insured against fire for Rs. 53,81,000.

W. T. HENLEY'S TELEGRAPH WORKS CO., LD.

Synopsis of Balance Sheet:

LIABILITIES.	£	ASSETS.	£
Capital ...	8,50,000	Block (net) ...	9,76,939
Debentures ...	1,50,000	Stock-in-Trade ...	4,08,612
Reserves ...	18,57,246	Outstandings ...	7,51,463
Profit & Loss ...	6,63,152	Cash & Invests. ...	13,83,384
Total ...	35,20,398	Total ...	35,20,398

Extracts from Directors' Report:

Accounts for year ended 31st March, 1933 show that a profit has been made during the year of £300,298-9-0; deduct—Directors' and Auditors' Fees, Debenture Interest, and amount written off for Depreciation of Buildings, Machinery, etc. £71,989-0-4, balance £228,309-8-8, to which has to be added the amount brought forward from 1932 £557,495-13-9 making a total of £785,805-2-5, deduct Income Tax £13,387-14-10, Dividend on Preference Shares to 31st December, 1932, £9,000, interim Dividend on Ordinary Shares £48,750, transfer to Reserve against Trustee Securities £1,515,-17-9, transfer to Reserve Account £50,000, total £122,653-12-7, leaving an available balance of £663,151-9-10.

The Directors recommend the payment of a final Dividend on the Ordinary Shares, of 2s. 6d. per Share (less Income Tax), for the year ended 31st March, 1933, making 4s. for the year. They also recommend a Cash Bonus of 2s. per share (less Income Tax). These will require £146,250, leaving to be carried forward to next year £516,901-9-10.

The Directors report that the balance of the Profit & Loss Account has been materially affected by the reduced return on investments. The turnover of the business has increased during the past year, and the Directors are of opinion that the financial results are satisfactory.

The Company's subsidiary, Henley's Tyre & Rubber Company, Limited, made a profit for the year, but no part of this profit has been brought into the accounts of the parent Company.

HARMUTTY TEA CO., LD.

The Company harvested a crop of 568,262 lb. in 1932 (against 552,560 lb. in 1931). The cost of production was reduced from 13.26d. to 11.25d. per lb., and the average price realized fell from 16.24d. to 12.15d. per lb. A profit of £1,897 is shown by the accounts (against £7,120). The Directors have transferred £1,500 to taxation account, and they recommend a dividend of 2½ per cent. (against 10 per cent.), which will involve a reduction in the sum carried forward from £2,661 to £1,620.

DOOLAHAT TEA CO., LD.

Profit for 1932, including £1,500 provided in 1931 for the loss of the Tonijan Tea Company, and now written back, £3,445 (against £10,069 for 1931). After transferring £1,900 to taxation account the Directors recommend a dividend of 7½ per cent. (against 15 per cent.), leaving £2,775 to be carried forward (against £4,642). Floating assets, £40,450; current liabilities, £7,645. The crop for the year amounted to 805,347 lb. (against 768,000 lb.), which cost 10.84d. per lb. to produce (against 11.52d.), and realized an average price of 11.92d. per lb. (against 14.38.).

THE UNITED PROVINCES ELECTRIC SUPPLY COMPANY, LIMITED.

Synopsis of Balance Sheet:

Extracts from Directors' Report:

The Directors beg to submit the Audited Accounts for the Half-year ended 31st March, 1933.

Plant—The Station Plant has run satisfactorily during the half-year and has been maintained in good condition.

The Maximum Load experienced during the half-year was 670 K. W.

Mains—Extensions to Mains have been carried out in:—North, East, and West Roads (Napier Town), Sathia Kowa, Meloniganj, Wright Town, Sunerhai, Ganjipura, near Fourth Bridge, and Gorakhpur.

In addition the H. T. Mains for supply to the Robertson College and extension to H. T. Mains to Galgallabal are in course of construction.

General—The following statement shows the Company's operations:—

Half-year ended.	Total Connections.	Units Sold.	Revenue Rs.
30th September, 1931 ...	658	1,357,052	1,97,660
31st March, 1932 ...	715	969,278	1,64,861
30th September, 1932 ...	818	1,344,683	1,96,461
31st March, 1933 ...	966	882,340	1,66,907

The Gun Carriage Factory and Military Establishments have reduced consumptions but the total Revenue of the Under-taking has increased slightly in comparison with the similar period of last year.

Supply to the Robertson College will be given in July.

Directors—Mr. S. D. Gladstone has gone on leave and Mr. W. Hunter of Messrs. Gillanders, Arbuthnot & Co., has been appointed an alternate Director in his place.

Mr. W. Hunter retires under Article 120, but being eligible offers himself for re-election.

Solicitors—Messrs. Morgan & Co., the Solicitors to the Company, are now working under the name and title of Messrs. Sandersons & Morgans. This firm has been appointed Solicitors to the Company.

Accounts—After providing for all charges including Rs. 64,000 on account of Depreciation, etc., a balance of Rs. 35,842 including Rs. 13,989-10-4 brought forward from the previous half-year remains available for distribution which your Directors recommend be disposed of as follows:—

	Rs.	A.	P.
Payment of dividend at the rate of 4 per cent. per annum free of Income-Tax on a Capital of Rs. 14,99,700	29,994	0	0
Carrying forward to next Half-year's accounts	5,848	0	0
Total ..	35,842	0	0

Owing to his inability to attend the Directors' Meeting Mr. Leslie Martin did not sign the accounts. By Order of the Board, Martin & Co., Managing Agents. 12, Mission Row, Calcutta, 10th July, 1933.

The Directors beg to submit the Audited Accounts for the Half-year ended 31st March, 1933.

Plant—The Maximum Load experienced was 700 K. W.

The new Turbine Plant and Boilers were taken into commission at the end of the half-year.

Mains—Extensions of Mains have been carried out in Wazirpura, Moti Katra, Chham Chham Gali, Hakim Gali, near Burning Ghat, and Lohamandi.

General—The following statement shows the Company's operations:—

Half-year ended.	Total Connections.	Units Sold.	Revenue Rs.
30th September, 1931 ...	1,171	821,193	1,97,378
31st March, 1932 ...	1,315	644,333	1,82,811
30th September, 1932 ...	1,435	859,186	1,97,085
31st March, 1933 ...	1,647	839,529	1,88,415

An additional discount of 12½% has been allowed for Lighting and Fan consumption as from 1st October, 1932, and the Revenue has been slightly increased in comparison to the similar period of last year.

Directors—Mr. A. T. Taylor resigned his seat and Mr. A. E. Mitchell of Messrs. Sandersons & Morgans has been appointed in his place.

Mr. A. E. Mitchell now retires under Article 119 but being eligible offers himself for re-election.

Mr. S. D. Gladstone has gone on leave for six months and Mr. W. Hunter of Messrs. Gillanders, Arbuthnot & Co. has been appointed an alternate Director in his place.

Mr. W. Hunter also retires under Article 119 but being eligible offers himself for re-election.

Solicitors—Messrs. Morgan & Co., the Solicitors to the Company, are now working under the name and title of Messrs. Sandersons & Morgans. This firm has been appointed Solicitors to the Company.

Accounts—After providing for all charges including Rs. 57,738-14-6 on account of Depreciation a balance of Rs. 43,588-1-1 including Rs. 16,325-13-4 brought forward from the previous half-year remains available for distribution which your Directors recommend be disposed of as follows:—

	Rs.	A.	P.
Payment of a dividend at the rate of 4 per cent. per annum (Rs. 2 per share) free of Income-Tax	29,976	0	0
Carrying forward to next Half-year's Accounts	13,612	1	1
Total ...	43,588	1	1

Owing to their inability to attend the Directors' Meeting Messrs. J. P. Bradshaw and Leslie Martin did not sign the accounts. By Order of the Board, Martin & Co., Managing Agents. 12, Mission Row, Calcutta, 10th July, 1933.

JOKAI (ASSAM) TEA CO., LD.

Dividend of 4 per cent. on the Ordinary shares for the year 1932, payable on 22nd July, (against 2½ per cent. for 1931).

MUTTRA ELECTRIC SUPPLY CO., LTD.

Synopsis of Balance Sheet:

Extracts from Directors' Report:

The Directors beg to submit the Audited Accounts for the Half-year ended 31st March, 1933.

Plant—The Plant has run satisfactorily and has been maintained in good condition.

The Maximum Load experienced during the half-year was 265 K. W.

Mains—Extensions of Mains were carried out in Calganj, Helanganj, Mahadeoghat and Maroogali.

General—The following statement shows the Company's operations:—

Half-year ended.	Total Connections.	Units Sold.	Revenue Rs.
30th September, 1931 ...	449	413,953	86,553
31st March, 1932 ...	553	295,713	61,777
30th September, 1932 ...	685	424,673	85,975
31st March, 1933 ...	779	291,616	58,619

The failure in January, 1933, of the Municipal Board's main pump for the water supply and the consequent running of its Oil Engine plant accounts for diminution in the Output and Revenue. A new pump has been obtained from England and it is hoped that normal supply will be resumed early in July, 1933.

Directors—Mr. S. D. Gladstone has gone on leave and Mr. W. Hunter of Messrs. Gillanders, Arbuthnot & Co., has been appointed an alternate Director in his place.

Mr. W. Hunter retires under Article 120 but being eligible offers himself for re-election.

Solicitors—Messrs. Morgan & Co., the Solicitors to the Company, are now working under the name and title of Messrs. Sandersons and Morgans. This firm has been appointed Solicitors to the Company.

Accounts—After providing for all charges including Rs. 18,261-3-1 on account of depreciation a balance of Rs. 9,931-8-9 including Rs. 8,913-11-0 brought forward from the previous half-year, remains to be carried forward to next half-year's accounts.

Owing to his inability to attend the Directors' Meeting Mr. Leslie Martin did not sign the accounts. By Order of the Board, Martin & Co., Managing Agents. 12, Mission Row, Calcutta, 10th July, 1933.

DOLOI TEA CO., LD.

Profit for 1932, £2,135 (against a loss of £2,923 for 1931). A dividend of 5 per cent. is to be paid (against nil), and £14,539 is to be carried forward (against £13,605 brought into the accounts). The crop for the year amounted to 555,874 lb. (against 390,547 lb.), and the gross average price realized, including an estimate for the portion unsold, was 6.63d. per lb. (against 6.41d.)

JUBBULPORE ELECTRIC SUPPLY COMPANY, LTD.

Synopsis of Balance Sheet:

Profit	35,842		
Total Rs. ...	16,46,118	Total Rs. ...	16,46,118

Extracts from Directors' Report:

Accounts cover the half-year ended March 31, 1933. The station plant has run satisfactorily during the half-year and has been maintained in good condition. The maximum load experienced during the half-year was 670 k.w. Extensions to main have been carried out in:—North, East, and West Roads (Napier Town), Sathia Kowa, Meloniganj, Wright Town, Sunerhat, Ganjipura, near Fourth Bridge, and Gorakhpur. In addition the H. T. Mains for supply to the Robertson College and extension to H. T. Mains to Galgallabal are in course of construction. The following statement shows the company's operations:—Half-year ended September 30, 1932,—Total connections 818. Units sold 1,344,683. Revenue Rs. 1,96,461; half-year ended March 31, 1933,—Total connections 966. Units sold 882,340 Revenue Rs. 1,66,907. The gun carriage factory and military establishments have reduced consumptions but the total revenue of the undertaking has increased slightly in comparison with the similar period of last year. Supply to the Robertson College will be given in July. After providing for all charges including Rs. 64,000 on account of depreciation, etc., a balance of Rs. 35,000, including Rs. 13,989, brought forward from the previous half-year remains available for distribution which the directors recommend be disposed of as follows:—Payment of dividend at the rate of 4 per cent. per annum free of income-tax, on a capital of Rs. 14,99,700, Rs. 29,994; carrying forward to next half-year's accounts, Rs. 5,848.

LLOYDS BANK, LD.

Synopsis of Balance Sheet:

Liabilities	£	Assets.	£
Capital paid up ...	15,810,252	Cash and at Bk. of Eng. ...	37,252,780
Reserve Fund ...	8,000,000	Money at Call ...	17,723,043
Deposits	373,562,041	Treasury Bills ...	59,505,000
Acceptance ...	3,008,150	British Bills ...	2,341,373
Eudorsments, etc.	37,445,256	Col. and For. Bills	1,123,222
		Treas. Bonds. ...	26,937,714
		Other Brit. Govt. Securities ...	62,866,823
		Indian & Col. Gov.	9,893,518
		Advances ...	139,002,855

Extracts from Directors' Report:

The features that emerge from an examination of the Balance sheet are that the proportion of cash to deposits is slightly lower than a year ago. In addition to the total shown above of cash, balances with, and cheques in course of collection on, other banks in the British Isles totalled £12,766,690, while in addition to the item of money at call, given above, balances with banks abroad totalled £1,190,944.

As might have been expected, there has been an increase in the holding of British Government Securities from about £23,000,000 to nearly £63,000,000. The extent of the shrinkage in trade activity is to be seen from the fact that in spite of the share which Lloyds Bank seems to have taken in the matter of French credits, loans and advances show a heavy shrinkage when compared with a year ago.

GUZERAT RAILWAYS COMPANY.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	34,50,000	Block (nett) ...	41,36,385
Debentures ...	18,00,000	Preliminary expenses	57,561

Profit	1,09,737	Balance in treasury	3,941
		Suspense ...	69,692
		Investments ...	89,969
		Cash balance ...	24,858
		Revenue expenditure	10,000
Total Rs. ...	55,10,742	Total Rs. ...	55,10,742

Extracts from Directors' Report:

Accounts relate to the year ended March, 31, 1933. The following statement shows the traffic statistics of the railways during the past 2 years:—Year ended March, 31—Number of passengers, 1931-32—663,198; 1932-33—752,775; Gross earnings, 1931-32—Rs. 1,75,137, 1932-33—Rs. 1,97,518. Merchandise in tons, 1931-32—95,745, 1932-33—72,228; Gross earnings, 1931-32—Rs. 1,86,444, 1932-33—Rs. 1,75,934; Total gross earnings, 1931-32—Rs. 3,75,813, 1932-33—Rs. 3,74,254; Working expenses, 1931-32—Rs. 3,20,368, 1932-33—Rs. 4,32,448; Total nett earnings, 1931-32—Rs. 55,445, 1932-33—Rs. 58,194. Percentage of working expenses to gross earnings, 1931-32—85.25, 1932-33, 115.55. The above comparative statement shows a welcome improvement in the number of passengers carried which are higher from the previous year. The increase has chiefly occurred on the Nadiad-Kapadwanj section, on which 99,610 more passengers than last year were booked. The Godhra-Lunawada section also showed some increase but there was a falling off in passengers on the Champaner-Shivrajpur-Pani section.

Whilst the total gross earnings of these railways are not unsatisfactory, it will be noticed that, for the first time in the history of the company, working expenses have exceeded the gross earnings by a considerable sum, *viz.*, Rs. 58,194, which is chiefly due to the necessary renewal of the boilers of five of the locomotives. Other maintenance and renewal charges were, however, considerably higher than was expected or than had been foreshadowed by the estimates made by the working agency. The amount of these nett earnings from interchanged traffic for the whole year amounted to Rs. 2,68,992 and only that sum is available and can be received on account of rebate. The results of working the three sections of the railways, including rebate available for the year show an excess of receipts over expenditure of Rs. 58,298 to which must be added the sum of Rs. 51,439 brought forward from last year's accounts, making Rs. 1,09,737 in all. No ad-interim dividend was declared, and the directors propose to apply the sum available for disposal as follows:—Dividend for the year ended March 31, 1933, at 2½ per cent. per annum, payable less income-tax, Rs. 86,250; balance to be carried forward, Rs. 23,487.

ETHELBARI TEA CO. (1932), LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	3,50,000	Block ...	3,50,000
Debts ...	49,584	Crop A/c. ...	24,222
		Stores, etc. ...	2,120
		Outstandings ...	5,693
		Cash ...	6,303
		Profit & Loss ...	11,246
Total ...	3,99,584	Total ...	3,99,584

Extracts from Directors' Report:

Report covers Season 1932.

General.—The Company was incorporated on 27th September, 1932, and took over the property and assets of Ethelbari Tea Company, Limited (in liquidation), as at 1st January, 1932.

Crop.—The outturn for the season was 3,949 maunds. The teas were of fair quality and on a very depressed market realized an average price of 4 annas 3 pies a lb.

Area.—The area under cultivation is 447 acres.

Accounts.—The receipts amounted to Rs. 84,678-7-8 and the expenditure to Rs. 95,600-14-10, showing a balance at debit of Revenue Account of Rs. 10,922-7-2, which is increased by Rs. 324, being subscriptions to Octavius Steel & Co., Ld., Provident Institution, resulting in a balance of Rs. 11,246-7-2 at debit of Profit and Loss Account which is carried forward.

The Estimates for Season 1933 are for a crop of 3,200 maunds to cost Rs. 97,079.

These figures are subject to revision in the event of the proposed scheme for restriction of output being adopted.

The Company's export quota under the Regulation of Exports Scheme has been fixed at 2,600 maunds.

Labour.—457 hands were employed on the garden at 31st December, 1932.

CARRON TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital ...	1,50,000	Block ...	1,50,00
Reserve ...	2,05,100	Crop A/c. ...	64,16
Debts ...	7,533	Outlay ...	18,23
Profit & Loss ...	3,417	Outstandings ...	2,879
		Cash & Invests ...	1,30,778
Total ...	3,66,050	Total ...	3,66,050

Extracts from Directors' Report:

Report relates to the year ended 31st December, 1932.

Prices for Dooars teas showed a further marked decline and the result of the season's working discloses a loss of Rs. 13,454-14-10 which has been transferred to Provt and Loss Account. After sundry adjustments, including the appropriation of Rs. 5,000 from Reserve Fund, there is a balance at credit of Profit and Loss Account of Rs. 3,416-15-5 which we propose to carry forward.

Weather.—While a loss of 370 maunds tea was sustained by hail damage in May, weather conditions generally were favourable and the response of the garden to the special attention given to cultivation and manuring is gratifying.

Crop weighed out 5,306 maunds against 4,800 maunds estimated and 2,245 maunds in 1931.

The average selling price was 5 annas 8 pies compared with 9 annas 9 pies in the previous year.

Estimates for 1933 have again been compiled on strictly economical lines and provide for a crop of 4,800 maunds for an outlay of Rs. 1,51,660 including Inland Freight and Sale Charges.

DOOLOOGRAM TEA CO., LD.

Loss for 1932, £8,009 (against £15,135 for 1931). The debit balance carried forward now amounts to £8,902. Floating assets, £17,575; loan from bankers, £22,750; loan from secretaries, £41,975; creditors, £3,899. The output for the year amounted to 806,345 lb. (against 777,593 lb.).

BOROI TEA CO., LD.

Loss for 1932, £3,172 (compared with £1,181 for 1931), against which has been placed £4,832 brought forward and £276 transferred from income-tax. A dividend of 3 per cent. is to be paid (against 5 per cent.), and the credit balance of £1,216 then remaining is to be carried forward. The crop manufactured amounted to 520,594 lb.

WORLD OF INDIAN FINANCE

Calcutta, August 4,

Money was not so easy nor the glut so marked as in the earlier weeks. Nevertheless, lenders were plentiful at ½ per cent. and it is the borrowers that had to be coaxed. If credits were a shade less easy, the main explanation is to be found in the smaller sales of sterling by the market to the Government. Treasury Bills Maturities were also on the small side. For these reasons, the flow of funds into the market has been smaller than was the case in July. From current indications, it is safe to assume that at least right up to the middle of September, no change can take place in monetary conditions. This interval of six weeks should prove most favourable for the giltedge market in which there are abundant signs of healthy price revival and increasing activity. On the one hand, the bulls of April-May would appear to be quietly unloading at each rise in giltedge prices. On the other hand, there would appear to be a steady absorption of all the stocks by *bonafide* investors. The rise, that has taken place in government securities market during July, has, therefore, been on natural and healthy lines. Each rise has been followed by a small reaction, resulting in the consolidation of gains. It is not as though an impatient body of tired bulls keep watching the market for the most suitable opportunity for unloading. On the contrary, investment buying of a genuine kind has been in evidence ; and such investors have cause to be apprehensive that if they do not make their purchases in time, the prices would become still more unfavourable to them. The professional element does not seem to have created any large position for itself on the buying side. In the last settlement on the Bombay stock exchange, bears had to pay a "backwardation" of 1½ annas percent. This shows that the market is oversold. The position may be summarised as follows:

1. The professionals are oversold.
2. Tired bulls of the earlier boom have mostly liquidated their holdings.
3. Most of the rise in recent weeks is accounted for by genuine investment activities.
4. Further buying on *bonafide* investors' account for fairly substantial amounts is in prospect.
5. Money conditions are bound to remain extremely slack for at least two months.
6. The creation of a record, week after week, in the matter of the low yield on Treasury Bills must have a heartening influence on giltedge values.
7. So far as can be foreseen, there is no need to be apprehensive of any ill-timed tactics from the Government.

In view of all these considerations, we should think that, given a freedom from unexpected or abnormal developments, the giltedge market is bound to see a higher level of prices.

From this point of view we cannot understand why the Inperial Bank persists in the maintenance of a Bank rate of 3½ per cent. So high a rate is not justified by the conditions, present and prospective, of the money market. In the latest return of the Bank, that is, for the week ended July 28, Other Deposits are shown at Rs. 74 crores, against which Loans, Cash Creadits and Bills come to a bare Rs. 22½ crores. Investments in government securities stand at the high figure of Rs. 41.2 crores, after having touched Rs. 42 crores in the previous week. Cash balance is Rs. 27¾ crores. The very fact that investment in giltedge securities is nearly twice as big as the sums put out to finance trade must be taken as sufficient indication that a bank rate of 3½ per cent. is quite artificial. From the point of view of the Bank, one could understand that the authorities have always a reluctance to a lowering of the rate. Most of the loans are fixed at rates of interest which have a bearing on the Bank rate. Any reduction in the Official Minimum will, therefore, mean a lesser income on the whole range of advances to trade. But we suggest that when such advances are only Rs. 22½ crores and when the Bank is assured of an unchanged yield on the Rs. 41 crores in giltedge investments, it should take a broader view of the monetary situation and cause a reduction in the Bank rate.

From the point of view of the Government, there is no need whatsoever for the exercise of any credit control on behalf of exchange. A most striking fact in this financial year is that there are practically no short-term funds held in India on overseas' account.

there is, therefore, no exchange disturbance caused by sudden or substantial movement of fluid funds to foreign centres. This is proved by a study of the trade figures in relation to Government's purchases of sterling. Balance of transactions in merchandise and treasure in the first quarter of the fiscal year was Rs. 21.32 crores as against which Councils purchased by the Controller of the Currency came to the equivalent of Rs. 15.18 crores. Thus, most of the total visible balance of trade has been available to the Treasury for its remittances. In earlier years, a substantial portion of such balance used to be swallowed up by the adverse balance on movements account. If our reasoning is correct, it follows that however easy money may be in India, so long as the rates here are slightly higher than in London, there is no need to apprehend any embarassment to the Government. Both from the point of view of the Bank and of the Treasury, a reduction in the Bank rate is, therefore, called for. If such reduction is not effected, the monetary authorities expose themselves to the charge that it is not the true interests of the money market, but other sectional interests, that decide the destiny of the Bank Rate in his country.

NOTICE

Copies of "Indian Finance Year-Book 1933-34" will be issued early next week to those whose orders have already been registered. Subscriber's who have not so far placed orders, are requested to write in without delay.

Managing Editor,
"Indian Finance."

It was agreed at Ottawa, as amongst the Empire units, that the various Governments of the Commonwealth should take all possible steps, consistent with sount finance, to maintain as easy conditions as possible in the money markets. After the inglorious end of the World Economic Conference, the Empire Delegations met in London and reaffirmed their Ottawa resolution. If the authorities in India, in signifying their assent to this easy money policy, feel bound to take active measures in pursuance of the resolution, they should have no hesitation in persuading he Imperial Bank to reduce the bank rate to a level consistent with the monetary situation as revealed in their own weekly returns as well as in the over-abundant surplus resources in banking circles. That the Government have been able to secure all the Rs. 1½ crores they needed of Treasury Bills in the current week at a yield of 15/16 per cent.; and that there is every hope of their obtaining all that they need at even more favourable rate in the coming weeks are conclusive tokens of the extreme slackness of money. Judged by whatever criterion, the present 3½ per cent. bank rate is untenable.

We wrote last week that exchange was extremely and painfully dull; that brokers were absolutely despondent; and that they complained that they had not seen for years a week so dull.. The current week was even worse. There was utter listlessness in business circles. In regard to the smallness of turnover, this week may well constitute a record. It is a poverty-stricken market—said a banker.

On the weekly sterling tender day applications were received at 1s. 6 1/16d. for £435,000 and were fully allotted.

T. T. may be quoted 1s. 63/64d., right up to end of the year. But this rate must be said to be but barely available.

Bills may be quoted: 1s. 6½d., up to October; and 1s. 6 9/64d., November.

Money was very easy. The nominal rate for interbank credits was ½ per cent. Union rates for call, three days and seven days notice money were quoted ½ per cent. Onemonth, twomonth and threemonth deposits quoted 1, 1¼ and 1½ per cent. respectively..

OTHER INDIAN MONEY MARKET

(From Our Correspondent).

(By Wire)

Karachi: August 3.

The sterling exchange is quiet with a weaker undertone. There are sellers of ready to January T. T. at 1s. 6 3/64d. and buyers at 1s. 6 1/16d.

Three months bills are quoted 1s. 6 1/8d. on acccount of extremely easy monetary conditions and falling off in export demand. Need for selling sterling is feeble—this is amply reflected in this week's sterling tender applications—which tends to depress exchange.

Call money is quoted one per cent. with no borrowers. The market has more money than it can absorb.

DOMINION LOANS IN LONDON.

A week rather full of transactions in the international capital market, perhaps suggestive that we are nearing the eve of the period of the resumption of international capital movements. The conversion loan floated a fortnight ago by the Commonwealth of Australia, which was detailed in the Overseas columns last week, has paved the way for Canada to come on the London market for a new loan of £1,500,000 at the rate of 4 per cent. per annum. It is a long-term issue repayable by 1958 through the operation of a sinking fund, with the right to redeem after 20 years. It is significant that Canada, which had not come on the London market for nearly two decades, has now agreed to meet her new loan requirements from Great Britain. It is possible that the agreement of the British Commonwealth of Nations over a common monetary and exchange policy has been the occasion for British forgetting the significant failure of Canada to implement the Ottawa agreement and to seek to smother Canadian recalcitrance towards the Empire with a fresh kindness. It is reported that the reception of the market to the Canadian loan is warm and that the issue will be a success. This might be expected as the Australian new 4 per cent. loan has commanded a premium of 7/8 per cent. in the market.

Repayment of British Credits to France.

Another important event of the week is the return of a half of the £30 million credit extended by British bankers to the French Treasury in May last. It will be remembered that stability of imperial exchange rates. The failure of the regotiations for more than a fortnight ago, M. Deladier announced that the French Treasury had decided to avail of their option to repay the British loan in part at the end of July. The exact manner of repayment has not yet been known and we shall probably have to await the receipt of air mail papers to find whether the repayment has any significance for the relations between the sterling and the franc exchanges. For it was believed at the time the loan was first contracted that the loan would be repaid from the sterling balances of the Bank of France, for which the Bank would be repaid in francs by the Treasury at home. The American Government have also been active in formulating schemes of new capital issues. It was reported early in the week that a long-term loan of 2,000 million dollars was ready to be completed by the Government. That the American Government are in need of replenishing their resources by a large-sized capital issue is well-known ; but further comment is not possible as the details of the scheme are not yet to hand.

"Sterlingaria."

In the Editorial comment on the close of the World Economic Conference we observed that "the next fortnight would perhaps, show the consequences of this failure on the economic policies of the various Governments," suggesting thereby that the failure of the Conference would give a fillip to economic nationalism and encourage governments to prosecute such plans of isolated national economic action as they might have on hand. The week has shown that such effects were almost immediate. On Saturday last came the announcement that the nations of the British Commonwealth had decided on a common monetary and exchange policy. A declaration issued after the meeting pointed out that the Delegation considered that the Commonwealth should pursue a price-raising policy until there was evidence that equilibrium had been established when the position could be stabilised. It was also emphasised that it was necessary to maintain the stabilisation have left Britain free to follow any policy she likes in regard to the sterling and the sterling exchanges. She has no commitments to other countries in this regard and provided the details of this agreement on principle are worked out it might be possible for the Empire countries to constitute what Sir Basil Blackett called a *"sterlingaria."* The Chancellor of the Exchequer declared in reply to the question in the House of Commons: "It is not part of our policy to link sterling to gold or the dollar. We might pursue our own independent course in this matter in the interests of the country and the Empire." The agreement on the stability of the inter-Imperial exchanges signifies that so far as the Government are concerned, they are not disturbed by the controversy which has been waging in England for a month now about the relative merits of linking sterling to the franc or dollar. Eminent financiers and economists have taken part in the controversy ; and there are distinguished names among the advocates of either viewpoint. But now that the Government have accepted in principle the formation of the sterling area, it should be supposed that whatever the Government might do through the operations of the control in regard to the value of sterling in dollars or francs, the objective of currency policy would be the formation of a common Empire monetary policy.

Benefits of Empire Monetary Policy.

It must be remembered that the common Empire monetary policy is not, like many other monetary schemes that are proposed in the present day, an impracticable paper programme. The sterling area is to some extent already an accomplished fact. And provided the Empire could agree on a certain measure of inflation calculated to raise the price levels in the countries of the British commonwealth, it should not be difficult to support all the nations for such a policy. For it is essential for countries among the Empire that the real burden of the indebtedness may be reduced by a progressive increase in the price level. Once understanding in regard to the details of the management of a common Empire standard is arrived at, then it is more than probable that the Scandinavian countries and others, who have close commercial link with Great Britain, would agree to stabilise their currencies in relation to sterling. So that independent of what the United States or the gold standard nations might do, there would be a large part of the world preserving a common currency policy and a fair measure of stability in the exchanges. It may be expected that in regard to monetary policy the Empire would stand midway between the gold standard countries with their deflationist inclinations and the riotous inflationism of the United States. The very fact that a great part of the world stabilises itself as a mean between these two extremes might make the task of a future monetary conference easier in as much as they would have a compromise ready for them between the two extreme views.

Is America in better mood?

The relation of the break in stock and commodity prices in America and its effects on the economic policy and programme of Mr. Roosevelt to the monetary question under discussion must also be appreciated. The break in prices should, we believe, have provided Mr. Roosevelt with a welcome opportunity to point out to the American business world that the boosting of prices through an unstable dollar is not after all an essential part of the new economic policy. If from now, the American administration makes determined efforts to rescue their economic policy from the adventitious aid of further depreciation of the dollar, they would find it possible before long to heal the breach which they have created in the monetary Sub-Commission of the World Economic Conference.

NATIONAL INSURANCE CO., LTD.

7, COUNCIL HOUSE STREET,
CALCUTTA.
(Established—1906.)

Before taking out a life assurance policy it is better to apply all the rigid tests for a good company.

The "National" will surpass any other Company in these tests.

(1) Indian Capital—Indian Management—for the benefit of Indians.
(2) The Company has never contested a claim on a technicality.
(3) The low safe rates of premium provide maximum assurance at minimum cost.

The "National" keeps well ahead of the times and its policy of "fair and square dealing" which began with its founding, ever since 1906, has been continuous.

R. G. DAS & CO.,
Managers.

National Fire & General Insurance
COMPANY, LTD.

The Company issues Policies covering:—

FIRE,

Loss of Profits by Fire, Fire and Material Damage following Riot AND Civil commotion.

MOTOR CARS - - -
MOTOR CYCLES - - -
COMMERCIAL VEHICLES

NATIONAL INSURANCE BUILDING,

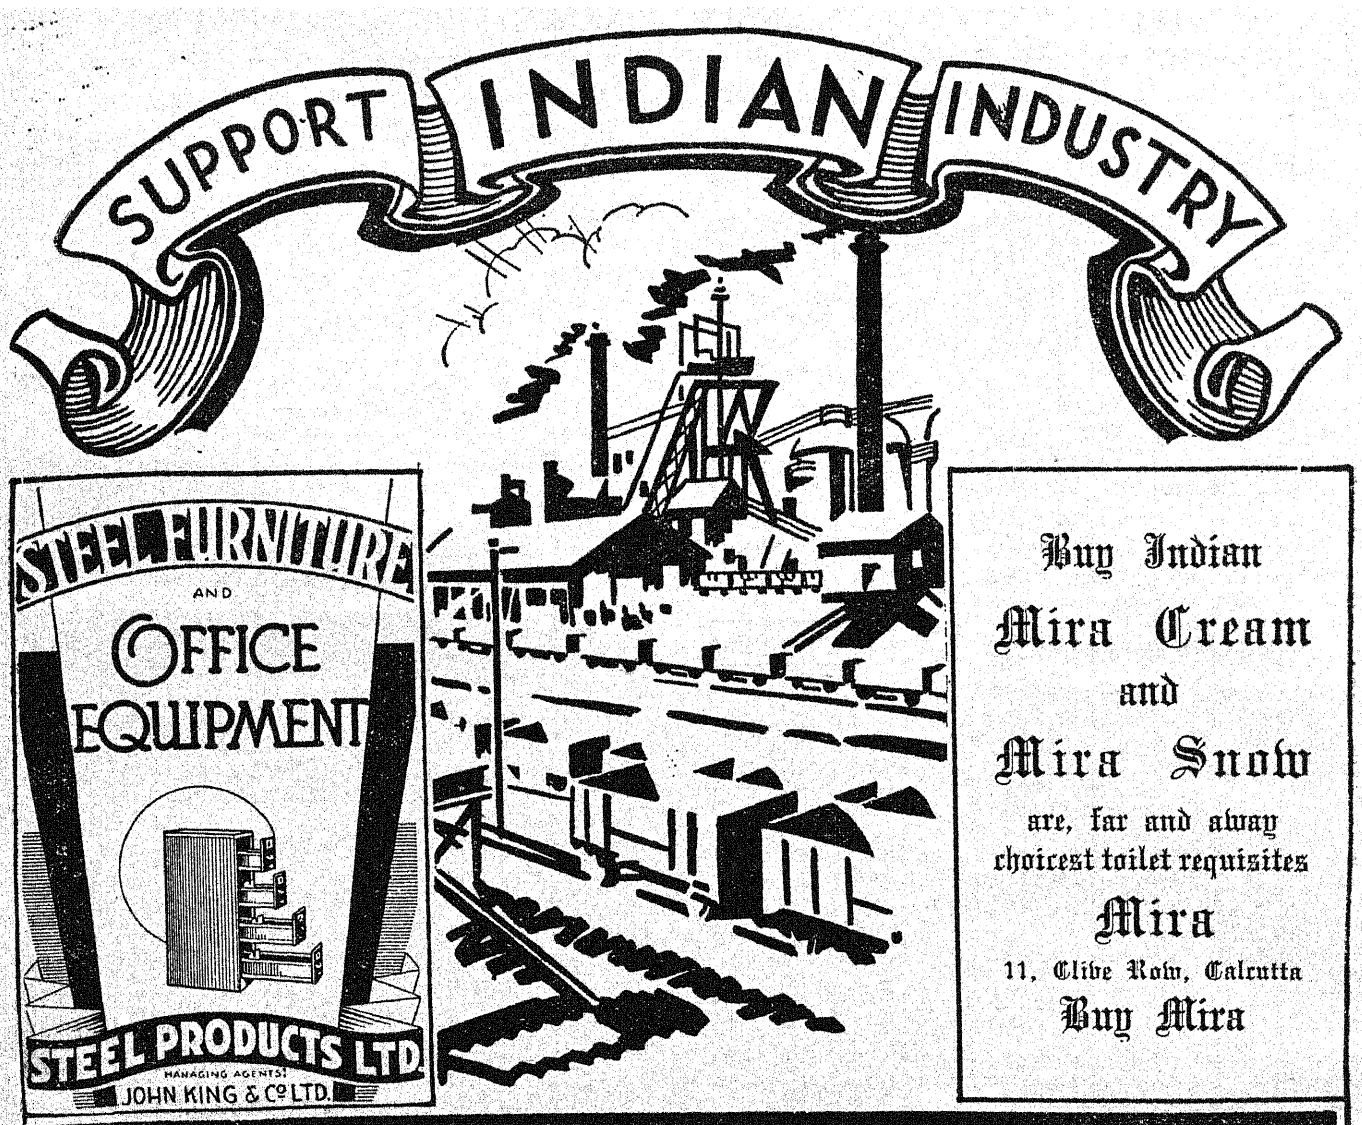
Loans, Overdrafts and Cash Credits.

The Bank grants accommodation on terms to be arranged against approved securities.

C. E. RANDLE,
General Manager.



'WHY YOU SHOULD SHOP AT

CURRIMBHOY'S

There are three chief reasons why you should shop at Currimbhoy's. Firstly, you can be certain that the very best quality cloth is being supplied to you because you can rely on the famous Currimbhoy group of mills where the cloth is made. Secondly, you are supporting Indian Industries when you purchase at Currimbhoy's Cloth Depot. Thirdly, Currimbhoy's fabrics are unequalled in India for their durability and lasting colours.

STOCK EXCHANGE REPORTS

CALCUTTA STOCK EXCHANGE.

(From Our Correspondent).

Calcutta, August, 3.

Jute.—Very quiet conditions prevailed in this section during the week and on Wednesday Howrahs had a very heavy fall in prices. Thursday, however, saw an improvement in prices quoting Rs. 48-14 at the close. Kamarhattys moved back to Rs. 477, Anglo-Indias were easier at Rs. 375, Barnagores changed hands at Rs. 135 small lot, Nationals were easier at Rs. 21-10, Kanknarrahs were dealt in at Rs. 445, Orients changed hands at Rs. 210, Reliance were steady at Rs. 73-8, Bally quoted Rs. 153, Cheviot Rs. 222, Kinnison Rs. 650, Presidency had some enquiry at Rs. 5-14, Albions quoted Rs. 246, Auckland Rs. 180, Champdany Rs. 127, Dalhousie Rs. 367, Fort William Rs. 257, Lothian Rs. 275, and Union Rs. 390 small lots.

Government Securities.—This section was inclined to be dull and quiet as compared to last week but on Wednesday the tone seemed to be much firmer. 3½ per cent. Paper moved up to Rs. 85-7, 4 per cent. 1960—70 Loan had buyers at Rs. 98, 3½ per cent. New Loan was better at Rs. 94-11, 5 per cent. 1935 Bonds Rs. 104-10, 5 per cent. 1939—44 Rs. 106-11, 5 per cent. 1945—55 Rs. 113-3 and the 5 per cent. 1940—43 Rs. 106-13.

Banks and Railways.—Central Banks quoted Rs. 24, Imperials fully paids Rs. 1,195 and the Contributories Rs. 295, Bank of India quoted Rs. 102-8, Allahabad Bank Rs. 327 and Rs. 160 respectively, while in Railway shares Chaparmukh-Silghat quoted Rs. 74 small lot, Hoshiarpur-Doab Branch Railway Rs. 83 small lot, Sara-Serajganj Rs. 85 small lot, Darjeeling-Himalayan (Ordy.) Rs. 77.

Coal Shares.—There was a fairly general enquiry in coals all round with hardly any alteration in prices. On Wednesday, however, there were more sellers in evidence. Burrakurs were on offer at Rs. 11-4, Equitables were steady at Rs. 17-8, New Beerbhooms were dealt in at Rs. 9-8, Pench Valley improved to Rs. 30-12, East Indian Rs. 14-6, Ghusick and Muslia Re. 1-14, West Jamuria Rs. 7, South Karanpura Rs. 2-13, Bokara and Ramgur Rs. 7-8, Raneegunge Rs. 30-12, Bengals Rs. 213-8. But at the close the market showed signs of steadiness with a rising tendency in prices.

Cotton.—This section was unchanged during the week with practically no buying in evidence. Bengal Nagpores quoted Rs. 19-12 and Kesorams Rs. 3-5.

Tea.—On Tuesday, however, there was less interest shown in this section and prices tended to fall back, and in spite of the improvement in the auction sales sellers continued to predominate. Bishnauths were dealt in at Rs. 23-4, Hasimaras improved to Rs. 35-12, Patrakola were marked up to Rs. 808, Sarugaon were on offer at Rs. 11-12, Tongani had buyers at Rs. 7, New Terai had buyers at Rs. 10-10, North Western Cachar dropped back to Rs. 263-8, Seajuli were marked up to Rs. 33-4 while Belgachi had buyers at Rs. 6-12.

Miscellaneous.—Only a small amount of business was done in this section. Sugar shares were quiet, Samastipurs changing hands at Rs. 17-4, while a small lot of Carew & Co., were dealt in at Rs. 15. Bengal Timber Trading were marked backed to Rs. 124, Burma Corporation quoted Rs. 9-2, Karanpura Development Rs. 7, Indian Iron & Steel Rs. 4-10, Indian Standard Wagon (Ordy.) Rs. 41-4, Bengal Aerating Gas Rs. 63, small lot, Bengal Telephone (Ordy.) Rs. 16, Port Shipping Rs. 13-4, B. I. Corporation (Ordy.) As. 14, Titaghur Paper (Ordy.) Rs. 14-8 and Bengal Bonded Warehouses ("A" shares) Rs. 555.

BOMBAY STOCK EXCHANGE

(By Wire.)

(From Our Correspondent).

Bombay, August 3.

During the week under review, all the markets practically remained closed on the first and second instants owing to the Mahatma's arrest.

All giltedged securities ruled very steady evincing a rising tendency. Government 3½ per cent. Paper, which closed at July 27 at Rs. 85, fluctuated between Rs. 85-2 and Rs. 85-5 and to-day, having touched Rs. 85-12, was quoted at Rs. 85-11 at 2 p.m.

Mills shares developed a sagging tendency, Bombay Dyeing coming down from Rs. 800 to Rs. 781-14, Fazulbhoys from Rs. 348-12 to Rs. 321-14, Century from Rs. 240 to Rs. 231-4 and Pearl from Rs. 239-6 to Rs. 220.

Quite on the contrary, industrials ruled steady. Tata Steels, the Cement group and Big Power shares also registered fair advance. Tata Steel (Ordy.) rose from Rs. 54-8 to Rs. 57-12, Second Preference from Rs. 87 to Rs. 94-12 and Deferred from Rs. 212-8 to Rs. 225, closing at Rs. 57-6, Rs. 94-8 and Rs. 221-4, respectively. India Cements improved from Rs. 282-8 to Rs. 295-10 and Bundis from Rs. 25-6 to Rs. 26-10. Andhra Valley advanced from Rs. 1,456-4 to Rs. 1,472-8, Tata Power (Ordy.) from Rs. 1,026-4 to Rs. 1,042-8 and Tata Hydros from Rs. 158-7 to Rs. 160-10. Bombay Trams firmed up to Rs. 139-1, Alcocks to Rs. 197-8, Imperial Bank old issues to Rs. 1,202-8 and Bombay Burmas were steady at Rs. 389-6. The market will continue to be erratic for the present.

25 YEARS TEST

REVEALS THE BEST

JUTE AND JUTE GOODS

JUTE.

The market, for the major part of the week under review, ruled quiet with a steadier tone towards the close of the week. Values on the whole have been lower over the previous week. The highest and lowest for October futures were Rs. 31-4 and Rs. 29-12 respectively.

The weakness in the raw jute market was partly due to the rumours of an import duty to be levied on raw jute in U. S. A., and partly to the weaker tone of jute goods. Fair amount of business was done by Continental buyers between Rs. 27-8 and Rs. 28-8 for ready firsts old crop, 8 annas to one rupee more per bale being paid for new crop August/September shipment. The requirements have been fully met by the stock holders who are eager to make room for new crop purchases.

Business by local mills is done for Indian Jat LR at Rs. 5 and District LR at Rs. 4-12 per md., with buyers for the former and sellers for the latter. The quantity of business done is not very large but buyers are always interested at these levels for decent quantities. At the moment there is no possibility of buyers raising their limits higher nor the sellers discounting it further.

Mofussil markets have ruled steady due to the pressure of arrivals and sales being absent. Sellers are offering with restraint but with the seasonal inflow during the coming months it is to be seen if the same will be maintained. However reports so far available go to show that sellers are not pressing sales.

Imports in Calcutta are increasing every day, arrivals of new crop being about 5 to 6 thousand mds., per day with the usual and expected day to day increase. Stocks are lower than last year. But the stock of pressed bales is still larger than the previous season at this time of the year.

Business in London has been of a fairly large nature at every decline. Values, however, in sympathy with Calcutta have gone down from £16-10 to £15-15 for ready Firsts and from £17-5 to £16-10 for September/October new crop shipments. Buying that has taken place in the London market on Dundee and Continental accounts during the past few weeks has been due not to the fact that buyers over there are looking forward for any appreciable rise in the value of raw jute in the near future, but because of the fact that they have sold fairly large quantities of jute goods to America during the recent rise while their supply of raw jute is comparatively poor. They have been therefore buying at these levels which are rather very much favourable in parity to their jute goods sale. If they book their requirements at these levels in the long run the very fact of their being satisfied for some months to come may act as a bear factor when they cease to buy and the harvested crop is pressed for sale. It must also be remembered that business in jute goods from consuming centres which was showing a brisk activity some months back is again rather dull. Unless fresh sales are absorbed at these levels, the buying of raw jute at this time will naturally evidence a setback.

JUTE MANUFACTURES.

The market has ruled steady but quiet with comparatively heavy day-to-day fluctuations. Since reporting last the hessian market on Friday opened very steady on better enquiry from consuming centres and prices touched Rs. 11-10. Later in the day the news was received that a representation has been made by the cotton interests in U. S. A. to the Government there that in view of a process tax on cotton it is desirable that similar tax or an import duty be levied on fibres competing with cotton. On enquiries from an important exporter of jute goods here it was found that a meeting of jute and *burlap* interests in U. S. A. was called on Monday, July 31, when the problem was discussed. It was proposed that an imoprt duty of 2 cents per lb. on jute and jute goods be levied.

This news had a very disturbing effect on the market, the big holders were very much perturbed and a forced liquidation was brought into the market with the result that values in the course of two hours dropped by 8 annas, the lowest was Rs. 11-2. Thanks to the bull interest of a group of strong holders who came out as buyers for near position. Consequently the lost ground was recoverd during the middle of the week, prices ranging about the same level. But this buying activity could not support the market in general. Heavy goods market sagged due to sheer absence of buyers. Hedges against long holdings became necessary and the long holders sold November futures against them. The result was that November futures is now at a discount of Re. 1 against ready, the latter being Rs. 11-6 and the former Rs. 10-8.

The position of the heavy goods market is getting weaker every day. Buying interest is conspicuous by its absence. Long holders are getting nervous. Stocks are

accumulating month after month, the same being augmented during July to little over 18 crore yards.

Buying support is very poor and consequently in spite of a fair amount of strength in the hessian market, and the values of the latter being more or less maintained at higher levels, there has been a net decline in the values of heavy goods by about a rupee in the course of this week.

Statistically the position of forward hessians is also not so encouraging. Exports of hessians during July has amounted to about 77 million yards against 89 million yards in June, 1933, while the stocks in Calcutta on August 1, 1933, is estimated at 76 million yards as against 72 million yards on July 1, 1933. It is rather disappointing that exports during these months should be poor. This fact is, however, fully discounted by the present price level for forward position, and leaves little room for any appreciable decline in the near future. However the future trend of the market will be determined by the world conditions in general and stock and consumption of jute goods in particular.

Towards the close, however, the market has shown some strength and buying interest is visible. On the whole the value of hessian seems to have been maintained at these levels with small fluctuations caused by usual buying and selling pressure.

COTTON AND COTTON GOODS

COTTON.

(By Wire.)

(From our correspondent).

Bombay, August 3.

During the week, New York October touched highest at 11.04 and lowest at 10.10. The market paced up and down along with Chicago wheat fluctuations. The U. S. Government is after industrial recovery and had launched blanket code for a while, letting loose dollar which appreciated to 4.33. Dollar has again depreciated to 4.53 and market steadied on rumours of Government again adopting inflationary measures. Weather news are mixed but somewhat favourable. Production, after allowing for reduction, is estimated at about 11 to 11½ million bales. New York October closed yesterday at 10.56.

Liverpool follows New York trend but in a cautious manner.

The local market exhibits rather bearish leanings as ample rain has fallen over cotton districts in India and textile trade continues to feel much depression. Broach April-May to-day closed at Rs. 225-12.

Karachi, August 3.

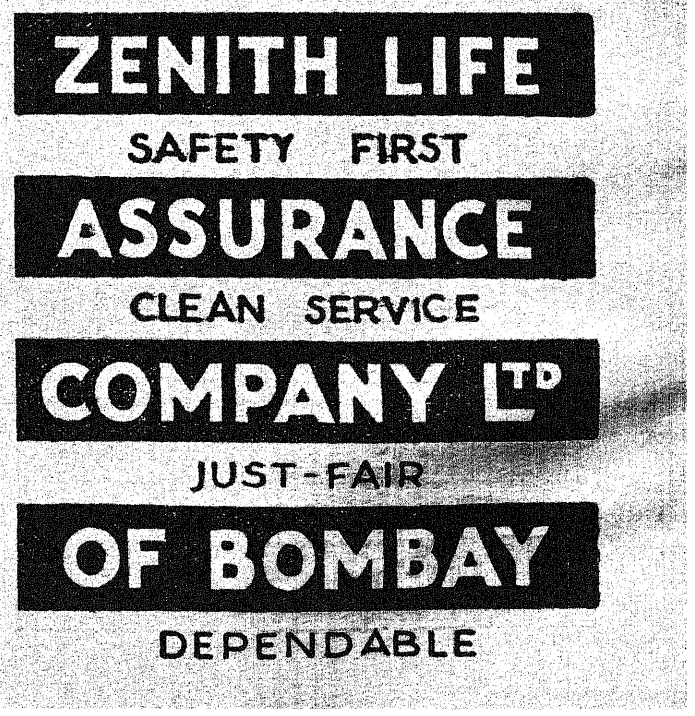
The market is weak due to surcharged political atmosphere and absence of outside demand. Sind Desi is quoted at Rs. 17-2 and Sind American at Rs. 22-8. Unless internal and external conditions improve materially, the prospects of appreciation is considered to be remote.

Since reporting last week there have been no fresh features in the cotton market to report. Quotations have remained almost unchanged, the undertone of the market remaining steady. New York middling spot has remained near 10.60 cents, Liverpool about 6.08 and Egyptian at 8.10. April-May Broach has fluctuated within a range of two to three rupees round about Rs. 225.

The long liquidation that was the feature of the last week was over and the fall has been arrested. The feeling of the trade has been, however, doubtful and cautious. Fresh developments in the American inflation policy are anxiously awaited. The uppermost feeling in the market is a desire to know. How the American Industrialist will take the new blanket code and how it will work in practice.

Weather conditions have been mixed and the reports as they come act both ways. Speculators are not taking much notice of them. Bureau reports and the progress of the acreage reduction scheme is also awaited. Market has been narrow. Spinners have been satisfied at the moment and wish to look on. Hedges on the contrary have been well absorbed and longs liquidated. Thus the technical position is quite sound and bull news will act favourably.

Local market has refused to follow the decline in America. But this is not unnatural because the rise in America was not followed to full extent in India. Longs



here also have liquidated and will follow bull news favourably.

Conditions of actual business are, however, dull. Demand from East and West continues on a hand to mouth scale. Weather conditions so far reported are quite satisfactory.

Local mills have been showing fair interest at decline, though the movement of manufactured goods is less encouraging, but it is not unexpected due to monsoon dull months. The markets will act on the reported rains in the months of August and September. Buying at decline will however prove beneficial.

We have received a copy of the Annual Cotton Chart for 1932-33 published by that well-known firm Chunilal Mehta & Co. It is the ninth of its kind, and is a very attractive publication, giving as it does, in the form of graphs, the variations in Broach April-May quotations in Bombay and corresponding months' quotations for American cotton in Liverpool and New York. A graph representing the course of the London-New York cross-rate has also been included, and in view of the wide fluctuations in that rate since Englands abandonment of the gold standard and later, America's going off the gold standard, its addition is appropriate. The chart is a very valuable addition to the weekly issues of the *Financial News*, published by the same firm. The publishers are to be congratulated on their enterprise.

PIECEGOODS.

During the period under review there has been very little activity in the trade and market has remained more or less lifeless.

Due to weaker American markets and decline in the values of cotton, forward business has been very much restricted, while the demand for spot, as well, has been, by the same token reduced to immediate requirements and replacements of exhausted lines.

There has been fair activity noticeable in Lancashire standard whites and fancy goods, and some forward business has been done. In Japanese goods there has been no fresh business. The trade is awaiting the result of the representations of the Japanese delegation to the Government of India.

The conditions in the yarn market continues to remain dull and there is nothing worth mentioning in this line.

The offtake of the Indian Cloth is fair although the stocks are large. The values are maintained and usual seasonal demand in standard lines is noticeable.

Bombay—Dull conditions have prevailed in Bombay market partly due to weaker cotton and partly due to the arrest of Mahatma Gandhi and the gloomy political outlook. Demand is slow and stocks are heavy. Dealers are acting cautiously and the feeling is nervous.

Upcountry—Delhi and Amritsar markets were a little more lively, although the net outturn has not been very large. There has been good demand for cheap Indian lines and woollens. Madras suitings and Japanese striped shirtings were also having good clearance and replacement orders were quite fair. The tendency, however, has been weak and shopkeepers refuse to keep big stocks.

BULLION

GOLD

(By Wire)

(From our correspondent).

Bombay, August 3.

Gold rate at first declined from Rs. 30-12-9 to Rs. 30-11-6 but has again risen to Rs. 30-13-6.

The market after ruling a bit steadier during the earlier part of the week has ruled quiet towards the close. The highest and lowest of the week were Rs. 30-12 and Rs. 30-8 per tola. The weakness was due to the weakness in London-Paris Cross rate. Banks have been fully buying for export purposes. The export during the week has amounted to Rs. 73 lakhs the total exports from India since September 1931 to end of July, 1933, amounting to about Rs. 1,47,00 lakhs.

Stocks in Bombay are estimated at about 6 lakhs tolas with a daily offtake of about 4 thousand tolas. Arrivals from up country are fairly large.

London—(Air Mail Week).—

The Bank of England gold reserve against notes amounted to £189,694,971 on 12th July, showing no change as compared with the previous Wednesday.

No purchases of importance were announced by the Bank during the week.

Moderate amounts of gold were available in the market, and demand was keen, with prices continuing to rule above the franc parity. The average of the quotations during the week was 124s. 3.08d.

SILVER.

(From our correspondent)

By Wire.

Bombay, August 3.

Silver is tending downward. The Shravan rate after declining from Rs. 56-8 to Rs. 55-14 stands to-day at about Rs. 56. Some excitement transpired on reports of the likelihood of silver duties being removed, but it has again subsided.

The week has passed featureless after the agreement reached at world economic conference reported last week. The fluctuations have been poor and the market is ruling about Rs. 56-8 per hundred tolas. Rumours were afloat that silver import duty in India is likely to be reduced but so far no confirmation is received of this news.

Stocks are heavy being estimated at 10 thousand bars in Bombay and 1,500 bars in Calcutta with a daily offtake of about 30 bars at the two places taken together. The market appears to remain stagnant and without any interest at the moment.

Bombay.

London.—Air Mail Week.

A quieter tone was noticeable during the week, and prices fluctuated within narrow limits. American buying following the proposals made by Senator Pittman at the World Economic Conference, imported some steadiness to the market, but the effect was offset by continental selling and re-sales by speculators. The Indian bazars bought and buying by China followed as a result of firmer exchange advices from that quarter.

The Stocks in Shanghai on the 15th instant consisted of about 126,400,000 ounces in sycee, 277,500,000 dollars and 6,300 silver bars, as compared with about 126,200,000 ounces in sycee, 277,500,000 dollars and 6,300 silver bars on the 12th instant.

TEA

Sale No. 8 of the season was held on July 31 and August when 19,500 chests of tea leaf with export rights and 3,300 chests for internal consumption were sold at annas 10-7 and annas 5-6 respectively. 5,700 chests dust were sold at an average of annas 4 per lb.

A good selection from all districts was offered. There was a good demand at pies 3 to 6 per lb. dearer than the previous sale. Good quality and tippy teas met a more general demand and prices were higher. Darjeelings were more in demand.

For internal consumption tea though the market was irregular there was a good demand and the tendency was slightly higher. Dusts were strong with a little change in price though common types were inclined to be higher.

The following are full particulars of sale No. 8:—

Teas with Export Rights.

	1933.	1932.	1931.

London.—At this weeks auctions, 44,000 packages of Indian, 23,900 of Ceylon and 6,500 of Java teas were put up for sale. There was a active feeling and somewhat better prices were fetched for medium grades, other grades remaining firm. In the case of Indian Tea the market was well supported. Among Java teas there was good competition for all descriptions, prices being generally firm.

The following were in lowest prices fetched for Indian Tea.

	Last auction per lb.	To-day auction per lb.
Common Pekoe	9½d.	9½d.
Common Broken Pekoe ...	9½d.	9½d.
Common Orange Pekoe ...	9⅜d.	9½d.
Common B. O. Pekoe ...	9⅜d.	9⅝d.
Common B. P. Souchong ...	9½d.	9⅝d.

The following were the value prices:—

Clean Common Pekoe ...	9⅝d.	9⅞d.
Clean Common B. Pekoe ...	9⅝d.	9⅞d.
Clean Common O. Pekoe ...	9⅝d.	10d.
Clean Common B. O. Pekoe	10d.	10⅛d.
Clean C. B. P. Souchong ...	9⅞d.	9⅝d.

For Java Teas the following were the lowest prices fetched.

Common Pekoe last auction 6¼d., to-day's auction 7¼d. lb.; Common Broken Pekoe last auction 6¼d., to-day's auction 6⅝d., lb.; Common Orange Pekoe last auction 7⅜d., to-day's auction 7½d. lb.; Common Broken Orange Pekoe last auction 7¼d., to-day's auction 7½d. lb.; Common Broken Pekoe Souchong last auction 7½d., to-day's auction 7⅝d. lb.

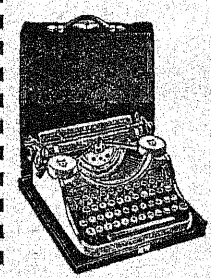
The following were the value prices:—

Clean Common Pekoe last auction 8d., to-day's auction 8d. lb.; Clean Common Broken Pekoe last auction 8d., to-day's auction 8d. lb.; Clean Common Orange Pekoe last auction 8⅛d., to-day's auction 8⅛d. lb.. Clean Common Broken Orange Pekoe last auction 8⅛d., to-day's auction 8⅛d. lb.; Clean Common Broken Pekoe Souchong last auction 8d., to-day's auction 8d. lb.

The following were the average prices of tea in the London market during the week:—

Indian tea (Northern) last week 10 46d., this week 11.06d. lb.; Indian tea (Southern) last week 10.36d., this week 10.54d. lb.; Ceylon tea last week 12.53d., this week 13.79d. lb.; Java tea last week 8.59d., this week 8.86d. lb.; Sumatra tea last week 8.47d., this week 8.11d. lb.

THE UNDERWOOD
PORTABLE



Ranks foremost in writing machines because of Lightness in touch—Quickness and ease of action—A type impression which is sharp and distinct—An Alignment of type which long and hard use will not alter.

It is quiet, because of a new carriage return, a new shift key mechanism and a generally subdued key action. It is fast, because incorporated in it are exclusive features that, for years, have made Underwood typewriters the speed typing machines of the world.

Fuller particulars promptly furnished on request or better still, ask for a demonstration.

4, LYONS RANGE, CALCUTTA

SUGAR

During the week under review there has not been much change in the sugar market. The quotations are more or less unchanged. Demand for ready sugar is fairly good, the interest in forward positions being almost nil. The stocks in Calcutta are estimated at about 4,000 tons. The two steamers to arrive from Java this month are expected to bring about 1,500 tons.

Stocks in the main Indian ports are:—

In Bags, 10 bags=1 ton.

Calcutta	...	(26th July)	42,700	(22nd July)	77,400
Bombay	...	(27th July)	60,000	(27th July)	93,000
Karachi	...	(28th July)	50,000	(29th July)	157,500
Madras	...	(24th July)	16,100	(25th July)	15,000
Rangoon	...	(24th July)	17,120	(25th July)	23,240

The markets in Cawnpore, and Bombay have similarly ruled featureless. The latter has ruled distinctly weak and a small decline in values have taken place.

There has been a short decline in New York market of about 10 to 14 points in near and forward positions, a small rally taking place towards the close. London market has remained more or less unchanged.

No fresh sales are reported from Java the quotations remaining unchanged.

According to a private estimate the European crop of sugar is estimated at six million tons against 5.5 million tons last year. The condition of the crop is quite satisfactory.

Quotations are:—

Calcutta.

GRAINS AND SEEDS

WHEAT.

(By Wire)

(From our Correspondent.)

Karachi, August 3.

Though there is occasional spurt in wheat due to speculative activity the market on the whole remains without much interest and price is sagging. Stock, which is rain-beaten, is at a discount of one rupee; and mills are interested only in fresh arrivals. Ready is quoted at Rs. 25-12 and September at Rs. 26-8. It is expected that the next month will see a natural reaction on price on account of accumulating stocks.

During the week the market has ruled quiet but steady with a little change in values. Buying interest is in evidence at every decline. Higher prices, however, are not supported by the trade. The demand ceasing as soon as it touches Rs. 4. The weather conditions in the wheat growing districts have been satisfactory and the longs therefore are inclined to liquidate at every price.

The following is extracted from the *Indian Trade Journal*:—

"The production of wheat (excluding U.S.S.R., China, Turkey, Persia and Iraq) in 1932 is put at 3,675 million bushels, as compared with 3,673 million bushels in 1931. The estimate for 1932 is still provisional and it is anticipated that the definite results which are not yet available will increase the amount determined statistically by at least 40 million bushels. It is, therefore, considered very probably that the 1932 production is fairly close to the result obtained in 1930, the year of the most abundant crop since the record year of 1928.

As regards the prospects of the 1933-34 crop, it appears from the latest information available that in Europe beneficial rain fell almost everywhere in May, and only in a few areas, particularly in Spain, were there complaints of drought. On the other hand, the low temperatures which characterised the greater part of May in almost all the countries in the Continent retarded the development of crops, with the result that it was generally much behind normal. On the whole, the condition of winter crops (principally wheat and rye) at the beginning of June was in the majority of the countries not very different from, and in some cases even better than, at the same date last year. The condition of spring crops was, however, less satisfactory. In the first half of June, the weather in a greater part of Western and South-eastern Europe continued to be cool with frequent rains, and higher temperatures appear to be necessary to secure good yields. In the above circumstances, the yield of the crop still depends to a large extent on the course of the season up to the time of harvest, but in any case, it is doubtful whether, for Europe as a whole, production will be as large as that of last year.

Sowings in the Southern Hemisphere are almost finished. In Argentina they were carried out in good conditions and in Australia under satisfactory conditions except in some districts of New South Wales, where drought is reported.

COAL.

The market has been extremely dull during the week, and there are no indications of any prospective improvement.

The prices are nominally as follows:—

	Per ton. Rs.	A.		Rs.	A.
Victoria, Desherghur and Poniati ...	3	12		...	
Other Raniganj	2	0	to	2	8
Super Selected Jherrias	3	12		...	
Selected Jherrias	3	8		...	
Other Jherrias	2	4	to	3	0

SHELLAC.

The market has gone down rather sharply and there has been very little buying interest noticeable. This is probably largely due to prevailing decline in other markets.

The following are the latest quotations:—

	Rs.	A.	P.
T. N.	22	8	0
S. T. I.	23	0	0
I. T. N.	21	8	0
12%	22	0	0
Super fine	25	0	0
Seed lac	16	8	0
Kiri	3	8	0
Stick lac	12	0	0
September futures	24	14	0

Shipments up to July 31st amounted to 25,455 chests.

HIDES, SKINS AND LEATHER.

(By our Correspondent).

Calcutta, 4th August.

The market during the week ruled very strong and prices were firmer than last week's quotations. There was a very strong demand for wet salted cowhides from Madras Tanners and all kinds of parcels were readily taken up as they arrived from outstations in the godowns of *Arathdars* of Colutola or Narkuldanga. The demand for better qualities continued keen and remains unsatisfied. Purchasers are ready to pay higher prices if they can get their requirements in the market. The prices obtained during the week for mixed lots of wet salted Durbhangas were As. 3-9 to As. 4 per lb. wet. *Beparis* are unwilling to allow selections to be made from their stocks, as they find that the demand for even mixed lots is keen enough. Narkuldanga market is also very firm and an increase of 10 rupee per score has been obtained on best qualities of Bengal wet salted Cowhides, which have been sold at Rs. 75 per score, 13-14 lb. average weight. Matiabruz slaughtered mixed quality has been sold at Rs. 65 per score, average weight 11½ lb. wet. Cow calf skins are in great demand and are being sold at Rs. 32 to 35 per score, mixed ordinary quality. The supply is very limited and prices of calf skins are bound to rise still further.

Demand for Buffalo hides has been keener than what it has been for some time past, and higher prices are being offered by local tanners for all qualities that are available in the market.

There were no sales of Dry framed Arsenicated and ordinary dry hides during the week, as the attention of the buyers is almost entirely focussed on wet-salted qualities in the Colutola market.

CENTRAL BANK GOLD BARS (FIVE TOLAS AND TEN TOLAS) ARE AN IDEAL GIFT.

Editorial Comments

CENTRAL BANK THREE-YEARS CASH CERTIFICATES ARE AN IDEAL INVESTMENT.

A RESERVE BANK FOR INDIA.

From the accounts that have been received in India of the recommendations of the committee appointed to consider, in London, the Reserve Bank proposal, it would appear that a shareholder's bank has been finally decided upon ; that the capital would be distributed regionally ; that each region would have a local board ; and that each region would elect a specified number of directors to the central board. No hard and fast rule is to be observed as regards the composition of the assets. Sufficient elasticity is to be maintained so that when the time is ripe for definite formulation of the plan for the kind of standard which India is to have, the composition of the Reserve will be defined more clearly and more specifically. For the time being, the reserve is to be made up on the basis of a sterling exchange standard, with the rupee linked to sterling at 1s. 6d. The agreement between the Reserve Bank and the Imperial Bank is to receive consideration at the time the discussions take place in India. These are the broad features of the present proposal. Till we have a complete report of the committee, it would be futile to attempt any detailed comment. For the time being, we would content ourselves with restating our position as regards the fundamentals of a Reserve Bank scheme.

* * *

Our arguments in favour of the Reserve Bank of India as a separate institution are :

(1) The banking development in India has been hitherto so unscientific that no progress is possible unless the unscientific features are removed. The Reserve Bank will form the foundation stone for an edifice built according to strict scientific principles.

(2) The Imperial Bank is admittedly a hybrid. Entrusting central banking functions thereto will accentuate its hybrid nature.

(3) The Imperial in its present position of special facilities and privileges is a menace to the growth of Indian joint stock banks. The increase of facilities and privileges, which will accrue in its being made a Central Bank also, will make the Imperial Bank more than a menace to the growth of Indian banks. It will mean the extinction of the latter.

So far as (2) and (3) are concerned, no special elucidation of our point of view is needed. There was need for some such discussion at the time when the Hilton-Young Currency Commission Report was published. For, there was, at that time, a few men who thought that the Imperial Bank should be made the Bank of Issue. In the altered conditions of today, however, there is hardly anyone who seriously proposes a scheme of this kind in preference to the inauguration of a separate institution. But we would like to elucidate our first reason in support of a Reserve Bank proposal. We do so because we believe that after the interest that was, for the time being, created in the banking question by the various banking enquiry committees, the banking problem of India has again receded into the background. It is time that an attempt is made to understand the Reserve Bank proposal in relation to what it could do to the development of banking in India. There is an universal feeling that banking amenities in India are woefully unsatisfactory. The grouse is daily repeated. No suitable solution has been forthcoming. Why is banking so backward and so lacking in a sturdy vitality for growth? Why is any remedy impossible? We state it as our deliberate opinion that Indian banking cannot grow because the surrounding conditions are a blighting influence on growth. The Government have persuaded themselves into a convenient belief that banking should be a matter of self-growth ; Indian banks must rely on themselves—on pure and simple private enterprise. Private enterprise did essay the feat but success was only partial. The monster debacle which occurred in the second decade of the century swept away many and left a few which, once the stunning effects of the shock were over, began to organise and consolidate their position, which by the end of the decade became satisfactory. Their growing strength served to stimulate private enterprise again. And the Union Bank of India, Industrial Bank of Western India, Calcutta Industrial Bank and Karnani Indistrial Bank were launched with a good sized-capital and with great aspirations. The expectations did not materialise. The Karnani Industrial Bank is carrying on—That is the utmost that can be said. The Calcutta Industrial Bank chose the more facile course of liquidation. The Union Bank made several efforts—some futile, a few not so futile—to capture business and exploit "pastures new'. It has managed to "chalav" but no outstanding success seems likely. The Industrial Bank of Western India has also been fighting valiantly—again a record of featureless past, plodding present and tame future. The desting of the new ventures is by no means inspiring—and it may be said that private enterprise cannot be tempted to tap the banking field.

* * *

The old concerns have been, perhaps, free from the problem of creating business. But no expansion has been possible on existing business. With the greatest ado, they just manage to maintain their status quo. And to do this within the last two years has been a matter of no small anxiety. We know this is not a cheerful tale—but it is a true one. Stagnation under the circumstances is inevitable ; setback is a contingency which always lurks in the horizon and to ward off which great circumspection is needed. The Government will not lift their little finger to help the Indian banks. The leaders of thought wrangle over pacts and challenges to Government and have no time or inclination to study the banking problem. A large section of the Indian public are yet to develop the "banking habit"—and the small section which has acquired it is not easily roused by an appeal to partriotism and to the need of supporting Indian institutions. We thus arrive at a *cul de sac*—the banking habit will not be developed until and unless Indian banks progress and develop in all directions ; and the Indian banks cannot progress and develop until and unless Indians acquire the banking habit. There is no getting away from the *cul de sac* unless Government give up their attitude of apathy under a false sence of analogy.

* * *

They argue in effect. "The British banking system has grown purely as a matter of private enterprise ; why should not Indian banking grow purely as a matter of private enterprise?" Our answer is : "India is not England. Analogies are misleading. India requires to be viewed from a standpoint suited to Indian conditions, customs, traditions and peculiarities". It is admitted that the Indian depositor is peculiarly susceptible to waves of elation and depression. Remedy? The Indian banks must be enabled to inspire confidence by the promulgation of the belief that the Government have confidence in them. The Indian public are lacing in banking habit. Remedy? The Indian banks must be so strengthened by the Government that they can develop with courage and thereby mobilise the hoarded resources of the nation. We welcome the proposal of the Reserve Bank in India if it is to be the first token of

the Government's desire to create a Bankers' Bank which will supply strength to Indian banks—to create a credit and monetary structure which will work so efficiently that national credit will grow on all sides resulting in greater banking activity. We welcome the Reserve Bank if it is to be the symbol of the realisation of the need for a scientific development of banking.

* * *

It will thus be seen that we view the Reserve Bank not as part of the White Paper scheme but as the core and centre of a comprehensive banking system for India. As we stated on a former occasion, the Reserve Bank is viewed by us as an economic issue. It has been made a political issue in the White Paper. When the time comes for the Assembly to debate the actual Bill embodying the Reserve Bank proposal, we hope that the legislators will make it clear that while they will support whole-heartedly a Reserve Bank designed to satisfy an economic need, they would refuse to be parties to a Reserve Bank that is intended to strengthen and consolidate the grip of the India Office and the Bank of England over the financial and economic affairs of India. This leads us to a statement of what, in our view, should be the essential features of India's central bank. In broad terms, the following may be said to be the fundamentals of a Reserve Bank scheme :

1. The electorate, be it of shareholders or otherwise, must be predominantly Indian.

2. Every possible safeguard should be taken against any manipulation of the electorate by any particular clique or caucus.

3. There should be no monopoly of control on the directorate by any particular province or provinces. In other words, there should be a regional directorate plan whereby provinces, big or small, important or otherwise, shall be assured of representation.

4. For the present, the electorate should not be inelastic or unalterable; that is, if the system now decided upon is proved by experience to be unsatisfactory, it should be possible to make modifications or alterations after a specified date.

If the Bank is to be a shareholders' bank, the capital of Rs. 5 crores is proper and adequate. The regional plan, based on the country being divided into five sections, is also satisfactory. As regards the shares, the following precautions should be taken :

(*a*) Preference in allotment to small subscribers.

(*b*) No one shareholder can hold more than 100 shares and each shareholder shall have one vote only irrespective of his holding.

(*c*) Companies under the managing agency of one firm can each hold a maximum of 100 shares provided that in no case can more than 500 shares be held by all the companies under one managing agency.

(*d*) Shares may not be held in the name of any one who is not domiciled in India or who is not a British subject ordinarily resident in British India.

* * *

There should be definite stipulations as regards the maximum dividend that will be payable to shareholders. It may be provided that the net profit derived from the Bank should be dealt with somewhat as follows :

1. To payment of a dividend at 5 per cent. per annum.

2. Of the residue, one half shall be placed to the Reserve Fund and the other half shall go to the General Revenue of the Government provided a dividend of 5½ per cent. shall be payable when the Reserve Fund reaches a total of Rs. 2,50,00,000 and a dividend of 6 per cent. when the Reserve Fund reaches a total of Rs. 5,00,00,000 and provided further the residue after payment of the dividend shall be entirely paid to General Revenue after the Reserve Fund has reached a total of Rs. 5,00,00,000.

* * *

It may also be useful if it be provided that, as in existing contracts with Railway Companies, the Government should retain an option to buy up the shares of the bank at par at any time after, say, ten years, by giving six months' notice, if the Government are requested so to do by a majority resolution of the Legislative Assembly.

* * *

Every Indian joint stock bank which has been placed on the approved list (such approved list being made by the Directorate from time to time subject to the sanction of the Government) should be entitled to an interest-free deposit of two lakhs for every new branch opened by the said bank after the inauguration of the Reserve Bank.

KNELL OF INTERNATIONAL TRADE.

Mr. Keynes' standing in the world of economists is so high that we are inclined to hail his recent conversion to the cult of national economic self-sufficiency as almost an event in economic history. In a series of articles in the *New Statesman and Nation,* Mr. Keynes gives his blessings to the policy, which is increasingly in vogue, of national economy in indifference to international trade. It might be thought that the breakdown of the World Economic Conference and the hopelessness of restoring the regime of free trade essential for any scheme of international economic interdependence have induced Mr. Keynes to incline in favour of national economic policy. Judging by the comments of the *Economist* on Mr. Keynes' articles, it would appear that Mr. Keynes considers "the decadent but individualistic capitalism into the hands of which we found ourselves after the War" to be not only impossible but even undesirable. "It is not intelligent," Mr. Keynes urges, "it is not beautiful, it is not just, it is not virtuous—and it has not delivered the goods." The case against *laissez faire* and free trade was never summed up more concisely nor expressed in more homely language. Those who had followed Mr. Keynes's essays on topics pertaining to *laissez faire* or some of his chapters in his *Treatise on Money* will not be surprised at the views he has now come forward to propound. The former enabled him to appreciate more and more the incurable misfits that grow in a system of un-controlled individualism. In the latter, his analysis of the notion of purchasing power of money opened his eyes to the changes in the budget of the ordinary individual in modern times as compared that of his forebears. It is well-known among economic students how vigorously Mr. Keynes protested against the confusion of the wholesale price index with the purchasing power of money as such. In that context, he pointed out that the goods and services on which the average individual expended his income have the loosest relation to the wholesale commodity prices. He also brought out the increasing proportion which services bore to commodities in modern life. We believe that this analysis must have enabled Mr. Keynes to appreciate more accurately the composition of individual consumption and the proportion between services, which are essentially indigenous, commodities of domestic manufacture and commodities which are imported. This leads naturally to the relative importance of national production and international trade; and this is the first step in freeing our minds from the obsessions of foreign trade which nineteenth century economics has incorporated into our mental habit.

* * *

We are, therefore, not surprised that Mr. Keynes has at last come forward to discourage the futile efforts at restoration of international free trade and give the support and authority of an orthodox econo-

mist for the movement towards national economic self-sufficiency. We regret that we have at the moment of writing only the first of the series of Mr. Keynes' contributions to the *New Statesman and Nation*. The first half of this is a clarification of the change in his views. He does not dispute the fundamental truths of free trade which, "stated with their due qualifications, no one can dispute, who is capable of understanding the meaning of the words." But "yet the orientation of my mind is changed; . . . my background of economic theory is modified." And this he attributes "to my hopes and fears and pre-occupations along with those of many or most, I believe, of this generation throughout the world, being different from what they were."

* * *

No one who has lived through the last War can help relating any theory which has an import to practical life to the need of preserving peace among the nations. "We are pacifist to-day," points out Mr. Keynes, "with so much strength of conviction that, if the economic internationalist win the point, he would soon recapture our support." One does not need to believe in Marx's economic interpretation of history to concede that the wars of the last one or two centuries have invariably had their origin in the grab for markets of capitalists who were able to command the fighting forces of their governments in support of their class interests. It may be argued, however, that with the more representative character of modern governments, the danger of every conflict of capitalist interest leading to an international war has been minimised and that the fight for markets might be carried out without disturbance to the peace of the world. There is really no reason to believe that a democracy of workers will be any more disposed to acquiesce in the loss of vital foreign markets than capitalist investors. Mr. Keynes shows in the following an inexplicably belated recognition of the dangers of economic interdependence to the peace of the world.

> "But it does not now seem obvious that a great concentration of national effort on the capture of foreign trade, that the penetration of a country's economic structure by the resources and the influence of foreign capitalists, that a close dependence of our own economic life in the fluctuating economic policies of foreign countries, are safeguards and assurances of international peace."

It has been evident in the past, and it will be increasingly so in the future, if the error is persisted in, that economic entanglements between nation and nation must increase the points of friction and heighten the danger of a universal conflagration. The outcry against Japanese imports in Britain is an instance in point. There is no knowing how long Great Britain will be able to put up with the injury which the Far Eastern Empire is doing to her export trade and even her own domestic economic activity. It is curious how the defenders of the existing internationalism can remain impervious to the volume of evidence which is daily growing. Not a day passes in the House of Commons without questions being put on the injury to foreign trade through dumping or through exchange depreciation.

* * *

We have repeatedly pointed out in these columns that unless the nations get clear about the proper apportionment of productive activity and the division of markets there is little chance of price being restored either on the political or economic sphere. The failure of nations in this regard has led to the break-down of the World Economic Conference and is bound to render futile any further effect in the same direction. But it must be admitted that economic self-sufficiency cannot be advocated solely on the strength of its importance to international peace. Even on purely economic grounds, the new ideal should be capable of being justified as superior to the alternative of economic interdependence. The most powerful argument in favour of free international trade is the diversity of productive resources, natural and otherwise, among the countries of the world. If division of labour is essential on this ground, then free exchange of commodities will tend to increase the economy and efficiency of such division. That science has scrapped many of the differential advantages of production between countries is a far more serious inroad into free trade than any that the most ardent protectionist can contrive. Mr. Keynes points out that "experience accumulates to prove that most modern mass production processes can be performed in most countries and climates with almost equal efficiency." Nature may thus be said to have compensated the increasing dangers of economic interdependence by the facilitation, through scientific progress, of a wide variety of productive activity in each country. The two factors together may be said to have established more than a *prima facie* case for national self-sufficiency.

* * *

The requirements of economic organisation also point to the desirability of reducing the importance of the international exchange of commodities to a progressive minimum. It is perhaps, too late in the day to recount the arguments in favour of economic planning. There is none left either in the ranks of practical industrialists and businessmen or academic economists to espouse the forlorn cause of absolute *laissez faire*. But there are many who still attempt to shirk the logical implications of planned economy. It requires more than ordinary imagination to conceive, and more than ordinary capacity to devise, a scheme of planned economy, in which the requisite stability could be assured without minimising the all too numerous bonds between each country and the rest of the world. Where for the prosecution of a

TALKING ABOUT INVESTMENTS

—the claims of a profit-sharing Endowment Assurance Policy merit most careful consideration. Such a Policy for, say, Rs. 10,000 creates a capital which can never depreciate, gives full protection for wife and child from the moment the first premium is paid, forms an acceptable security to your Banker for the purpose of an over-draft, and materially increases in amount as time passes.

Life Assurance receives practical Government encouragement in the shape of Income Tax rebate. It is the only form of Investment favoured in this way by Government. You will be wise to take full advantage of it.

The Standard Life Assurance Company is the Pioneer of Life Assurance in India, and is a Mutual Company over 100 years old and with funds amounting to over £23,000,000. No Office in the world carries out its valuation on a more stringent basis, which means immense reserves and great bonus-earning capacity.

The Company's position is well summed up in the following extract from a recent article in the financial press:—

> "It is one of the outstanding life offices of the world; and every year its accounts carry fuller evidence of thorough soundness from top to bottom, which means a high level of security and a high rate of profit for the policyholders."

policy, the consent and co-operation of a variety of foreign nations is essential, as, for instance, in the case of stabilisation of the exchanges, experience has proved that there is no half-way house between the ideal of a planned and self-sufficient national economy and the chaos of an unregulated international trade and finance.

* * *

The worst incidence of interdependence is seen in the transactions in the international securities. The flight of capital very nearly ruined India in 1928 and 1929. It ruined more than one European currency, was instrumental for driving Britain off the gold standard and nearly unseated the dollar, prior to its voluntary abdication, from its seat of power in international finance. Through its effects on the exchanges, it is not a little responsible for the institution of exchange controls and the multiplication of trade barriers, and the shuffling and chaos of production and markets. Mr. Keynes aptly points out:

> The divorce between ownership and the real responsibility of management is serious within a country when, as a result of joint stock enterprise, ownership is broken up between innumerable individuals who buy their interest to-day and sell it tomorrow and lack altogether both knowledge and responsibility towards what they momentarily own. But when the same principal is applied internationally, it is, in times of stress, intolerable—I am irresponsible towards what I own and those who operate what I own are irresponsible towards me. There may be some financial calculation which shows it to be advantageous that my savings should be invested in whatever quarter of the habitable globe shows the greatest marginal efficiency of capital or the highest rate of interest. But experience is accumulating that remoteness between ownership and operation is an evil in the relations between men, likely or certain in the long run to set up strains and enmities which will bring to nought the financial calculation.

The conditions in which such free flow of investments from country to country were justifiable obtained only when the newly inhabited parts of savage countries required the assistance and direction of the countries with an advanced technique and savings for investment abroad. "But I am not persuaded that the economic advantages of the international division of labour to-day are at all comparable with what they were." Thus the economic and financial grounds on which free trade was justified in the nineteenth century and the pre-war days have all weakened since; and the political argument was never in favour of free trade and is more against it now than before. If we may examine the political factors involved, we may point out that the expansion of international trade in the nineteenth century had the most undesirable effects on the domestic politics of each nation. The dependence of national industries on foreign markets, which could be won and retained only by the fighting strength of the State, broke up the sentiment of solidarity among the international working class and deprived the world of the most potent factor for international peace. It turned the campaign for a more equitable social order into disconnected skrimishes within each industry for more wages and less hours. The difficulties of democratic government are, in large part, due to the heedless march into a blind alley under the banner of *laissez faire* and free trade. The popular parties are left without any plan or programme; and the variety of brands of socialism leaves the masses bewildered and stupified as to where their real good lies. The maze of international economic relations could not be, and cannot be, unravelled. And so long as international trade continues to be the fetish is is, there will be no political party found in any country, capitalist or otherwise, to formulate a programme that would be both practicable and satisfactory to the working class. Democracy is naturally discredited; and dictatorship already threatens to start the world again round the political cycle with which Aristotle and Greek history have familiarised us. Where is the modern world to break this vicious circle except at this needless encumbrance with foreign interests?

TRAFFIC IN CALCUTTA PORT.

An esteemed correspondent writes:

Regarding the improvement in the general trade situation of the country, the figures regarding the traffic of the Calcutta Port Trust lead to interesting conclusions.

Below is the tonnage of seaborne imports and exports for the period April 1, to June 30, 1933 with figures for the same period during 1931 and 1932.

	1931.	1932.	1933.
	Tons.	Tons.	Tons.
Imports	731,307	493,930	523,009
Exports (Coal including bunker coal)	760,173	773,108	607,103
(Other exports) ...	611,953	581,255	701,218

The exports of coal are shown separately in accordance with the practice usually followed because the receipts per ton of coal are comparatively low, and, therefore, a drop in traffic is not so serious financially as a decrease in the exports of other commodities. The drop has been a big one, but it is not as serious as would appear at first sight. Shipments were exceptionally heavy during the first quarter of the last financial year, and the total quantity shipped during the year was nothing like four times as much. In fact the total amount was only a little over $2\frac{3}{4}$ million. The total shipments of coal this year will be considerably less. For one thing, they have been reduced to the extent of about 200,000 tons by the decision of the Railway Board to despatch coal required for the M. & S. M. and S. I. Railways by the all-rail route instead of despatching *via* Calcutta.

You will see that the exports of traffic other than coal have increased by a considerable amount. The increase over 1932 figures is principally due to pig iron of which an extra 48,000 tons have been shipped, baled jute an extra 66,000 tons and seeds an extra 24,000 tons.

* * *

Imports are higher than during 1932, but much lower than in 1931. During the first quarter of 1931,

there were very heavy imports of salt, about one-third the total imports of the year coming in during that period. This item accounts for about 50,000 tons of the excess over 1933 figures. The imports of rice were also heavy, approximately 104,000 tons coming in as compared with 56,000 tons during the first quarter of this year. The imports of sugar and molasses amounted to about 62,000 tons, but this traffic has, of course, practically disappeared. Also considerable quantities of Australian wheat were received in 1931 and the total quantity of wheat and seeds imported up to June 30, 1931 amounted to 68,700 tons as compared with 22,700 tons this year.

PROTECTION FOR THE ENAMEL INDUSTRY.

Of the many small industries that have been affected by Japan's big offensive in the export markets, the enamel industry, we understand, has applied to the Commerce Department for protection under the powers taken by them for the prevention of dumping. Bengal, which is the home of many such small industries, is interested in the industry as its main centre is in this province. But it is by no means confined to Bengal, as there is at least one huge factory started recently at Satara, besides numerous minor concerns spread over practically the whole of British India. The products of these concerns range over a wide variety, namely, enamel signs, articles of use for hospitals, and household hollow wares. And the principal markets in India are at present confined to the big trading centres of the country. The greater part of the custom is at present provided by the Government stores, public and private hospitals and municipal bodies. The provision of sign boards for advertisement purposes has expanded very considerably of late, owing to the big advertising campaigns planned by oil companies, motor and tyre manufacturers and other big corporations who need attractive sign boards at public places to retain and expand their custom. In a country like India where an expansive market lies ready to be tackled, there is no doubt that there is vast scope for the expansion of the enamel industry. In household articles, it will be a long time before the working classes can afford better dishes and pans than can be provided with cheap iron and enamel.

In this industry also, the Japanese importers have made serious inroads as may be seen from the following table giving the total imports of enamel ironware from Japan to British India in 1930-31.

Imports of Enamel ware from Japan into British India.

	1930-31	1931-32	1932-33	1933-34
	Rs.	Rs.	Rs.	Rs.
April ...	1,60,859	1,10,623	1,48,591	1,68,480
May ...	1,57,915	94,156	1,69,316	1,04,577
June ...	1,12,198	64,255	1,27,843	87,647
July ...	95,359	62,295	1,05,944	...
August ...	71,644	63,736	1,16,723	...
September ...	61,278	56,385	99,492	...
October ...	93,778	1,91,691	1,04,113	...
November ...	1,01,488	42,572	1,64,518	...
December ...	1,18,385	65,154	1,35,496	...
January ...	1,58,181	61,263	1,41,650	...
February ...	86,855	55,081	1,30,955	...
March ...	96,449	1,14,026	1,58,434	...
Total ...	13,14,359	8,91,237	16,03,075	...

Japan's share of this import trade may be judged from the fact that total imports into British India from other foreign sources except Japan amounted to Rs. 10½ lakhs in 1930-31, 6.12 lakhs in 1931-32 and 6.84 lakhs in the last financial year. There is, perhaps, little to regret in Japan ousting her foreign competitors from the Indian market. But there is every reason to believe that the indigenous producers have been affected by the current prices of Japanese goods. We learn that Japan is able to supply at Calcutta sign boards at as. 6 per sq. ft. while the indigenous cost is as. 10 per sq. ft., while the cost of the British enamel signs is roughly as. 12 including duty and clearing charges. It will be seen, therefore, that the indigenous producers are able to hold their own as against British and Continental manufacturers, while Japanese costs are threateningly low. The producers are naturally anxious that, if competition at these rates is continued, one of the most lucrative sides of their business will before long pass out of their hands.

* * *

The position is, perhaps, even more serious, in regard to the rice cups, dishes, bowls, basins etc. As these products are consumed by the poor classes of India, the initial cheapness of the Japanese product is naturally a great handicap to successful competition with the Japanese. At present rice cups are imported mainly from Japan which has 75 per

cent. of the total trade. As in most other lines, Japan has an eye to initial cheapness. Only light ironsheets and thin coatings of enamel are given in the products exported. And the Indian producers are not able, it is contended, to obtain iron sheets of similar thinness from the Tates, for whom the demand at present is probably not big enough to make production economic. The odds are, therefore, against the local enamel companies, whose price is about Rs. 2-4 per dozen for rice cups and Rs. 1-8 per dozen for rice bowls as against Rs.1-8 and Re. 1 per dozen of the Japanese articles.

* * *

We understand that in reply to its appeal for protection, the industry has been asked to collect the information necessary for a decision on this question. It may be easily guessed that the total capital invested in the industry at present is about Rs. 12 lakhs and that the value of the annual production is about the same. It cannot be, therefore, that the industry provides much employment which will have to be safeguarded through protection. But it is arguable that small industries should not be denied the benefits of protection from dumping merely on the ground of their smallness. Nor would it be quite valid to argue that protective duties on enamel articls from Japan are a hardship to the working classes who consume the rice bowls and rice dishes. For it is quite possible that through the frequent replacement of cheap and flimsy articles, the consumer is paying more for the imported commodity than he would have to pay for the indigenous manufacture. And there is much to be said against allowing an industry to perish, especially in this land of inadequate industrialisation. But we recognise that questions of protection cannot be decided *ex parte ;* and one must await the accumulation of further relevant evidence.

EMPIRE CURRENCY AND EMPIRE ECONOMY.

The only regrettable feature of the agreement arrived at amongst the delegations of the British Commonwealth to the World Economic Conference is the claim that the agreement on the need for a common Empire monetary policy is intended to consolidate the pacts arrived at Ottawa by the continuance of the policy of raising prices within the Empire. We are sure that this link between an Empire monetary policy and an Empire economic policy will be condemned by the bulk of public opinion as much in England is in India. The claims made on behalf of Ottawa pacts at the time of their conclusion can be dismissed as arising from *bonafide* ignorance of the issues involved and an incapacity to foresee their probable effects. But to repeat the same claims after a year of actual trial is well-nigh unpardonable. Not to speak of the ineffectiveness of the pacts, where they have been given effect to, there have been also significant failures to implement the pact. In the course of the debate in both Houses of Parliament on July 19 last, dissatisfaction was expressed at the dilatory fulfilment of the agreements entered into a year ago ; and it was admitted on behalf of the Government that no concrete results have been obtained from applications from British manufacturers to the Australian and Canadian tariff boards. Australia is guilty of increasing import duties against Great Britain in five cases while the Dominions have not scrupled to take advantage of the Ottawa provisions to dump their goods into Britain. Canada took more than eight months to establish the Tariff Board, to which she had agreed in the Ottawa Pact and that since then the Tariff Board has not functioned in any material respect, there have been other serious defections such as changes in the classification of imports to escape the incidence of Ottawa. Considering the history of the pacts during the last one year, not to speak of the more fundamental objections voiced by us in common with the liberal economic press in all countries of the Empire, it is necessary in the interests of the Empire monetary policy, which might be productive of results, if properly carried out, that the Empire economic policy as adopted at Ottawa should be finally denounced and rejected.

CASTINGS

SPECIALIZATION in the manufacture of General Castings in these times necessitates a high degree of skill in draftsmanship, pattern-making, metallurgy, foundry practice and engineering.

These in turn call for the most up-to-date plant and machinery, the finest of raw materials and labour trained in the art of moulding on the most modern lines.

The reputation which KULTI has gained for its products, results from a combination of all these factors.

Magnificent castings of types rarely attempted in the majority of foundries are now available at prices which compete even with inferior substitutes. The same skilled workmanship is applied to all Castings whether large or small.

Clive Street Gossip

The *role* of a financial prophet is hazardous. Yet, I find myself figuring, not infrequently, in that *role* before I realise what I have gone and done. In May, 1931, I was invited by the Nippon Club in Calcutta to address the members on the then-current financial situation. I had a most enthusiastic audience ; and as I warmed up to my theme, I came out with quite a few forecasts. I said that I did not want to study the position of Government finances beyond September. Before September, I anticipated a crisis. And I said that the crisis would be a default of cash or a default of exchange. In other words, as early as May, 1931, I informed my Japanese friends that the linking of the rupee to 1s. 6d., gold was bound to be snapped before the following September. I also declared that Britain would not be in a position to help India as she herself would be in need of help ; it would be no easy matter for England to save the pound. When the pound was sundered from gold and when the rupee, too, was likewise sundered, the Japanese came to have great faith in *Indian Finance* and its views. The Nippon Club lecture brought me over 200 subscribers from amongst the business community of the Far Eastern Empire.

* * *

Again in October, 1931, speaking at the Rotary Club on the effects of the abandonment of the gold standard by Britain, I was foolhardy enough to say that America's leaving of the gold standard was only a question of time. At the same time, I added that America would abandon gold not because of international but because of internal factors ; that America going off the gold standard would not after all be a bad thing ; that it would, in fact, be the starting point of a more comprehensive attempt to solve the problems connected with the truculent trade depression. At the time when I made the prophecy of the dethronement of the dollar from the gold pedestal, everyone was inclined to consider me extremely rash. I can now pat myself on the back and exclaim what an acute fellow I had been. However, it yet remains for me to consider how far my prophecy of the good that would come from America's departure from gold will be fulfilled.

* * *

This was the question I discussed in the course of an address which I was asked to deliver at the Rotary Club this week. Between my 1931 speech at the Club and my 1933 speech, considerable changes have taken place in people's psychology towards monetary problems. Both occasions synchronised with important landmarks in the currency history of the world. The first occasion was just after the sounding of the death knell of the gold exchange standard. The second occasion may well make us enquire whether the death knell of the gold standard itself has been rung. In any case, there can be no doubt that with the World Economic Conference ending in a debacle, internationalism may be said to be dead and coffined for the time being. During this interval, amongst the changes that have taken place may be mentioned the gradual abandonment of the Simon pure type of economics. All the old ferocious insistence on debts has disappeared. The supercilious contempt against default has yielded place to some manner of understanding and sympathy. The fanaticism about the gold standard holds sway only in a few climes. And the fetish about pars of exchange is dead. As for internationalism, the World Economic Conference, which came to an inglorious end last week, has proved that it is futile to talk of international co-operation. Even an economist like Professor Keynes is obliged to put in a strong plea for isolated action.

* * *

I may give two instances to prove the extent and nature of the change that has come over the world. In the summer of 1931, the National Government in England came into power on the proud claim that they alone could save the budget and save the pound. I do not know if the budget has been saved. Mr. Neville Chamberlain's budget announced last April did not evoke any enthusiasm even in quarters most friendly to the Government. As for saving the pound, depreciation of sterling in terms of gold by over 25 per cent. does not show that the rescue plan of the National Government has exactly succeeded. We have got the curious phenomenon of a Government, that wanted support two years ago on the score of saving the pound, asking the world to admire their present cleverness in saving British trade and industry and British finance by abandoning gold and remaining resolutely off gold. Or, recall to your mind the fervour with which Sir Basil Blackett pleaded for a stable exchange and for a high ratio in 1927. The Ex-Chancellor of the Indian Exhequer has written a most able book to prove that a stable exchange and a high ratio are just the things that the world does not want now.

I may, therefore, start this discussion from the point at which the World Economic Conference has left us. Whether we like it or not, the fact is that the world is to-day composed of a large number of sovereign and independent national economic units, each trying to make itself self-contained in the political as well as the economic spheres. In international gatherings, matters proceed smoothly so long as vague generalisations hold the field. When specific problems have to be tackled in a definite way, nationalism has always raised its head. That is the stubborn, unpalatable fact. It were blind folly to refuse to recognise it.

* * *

After all, what is wrong with this economic nationalism? Was there anything like economic

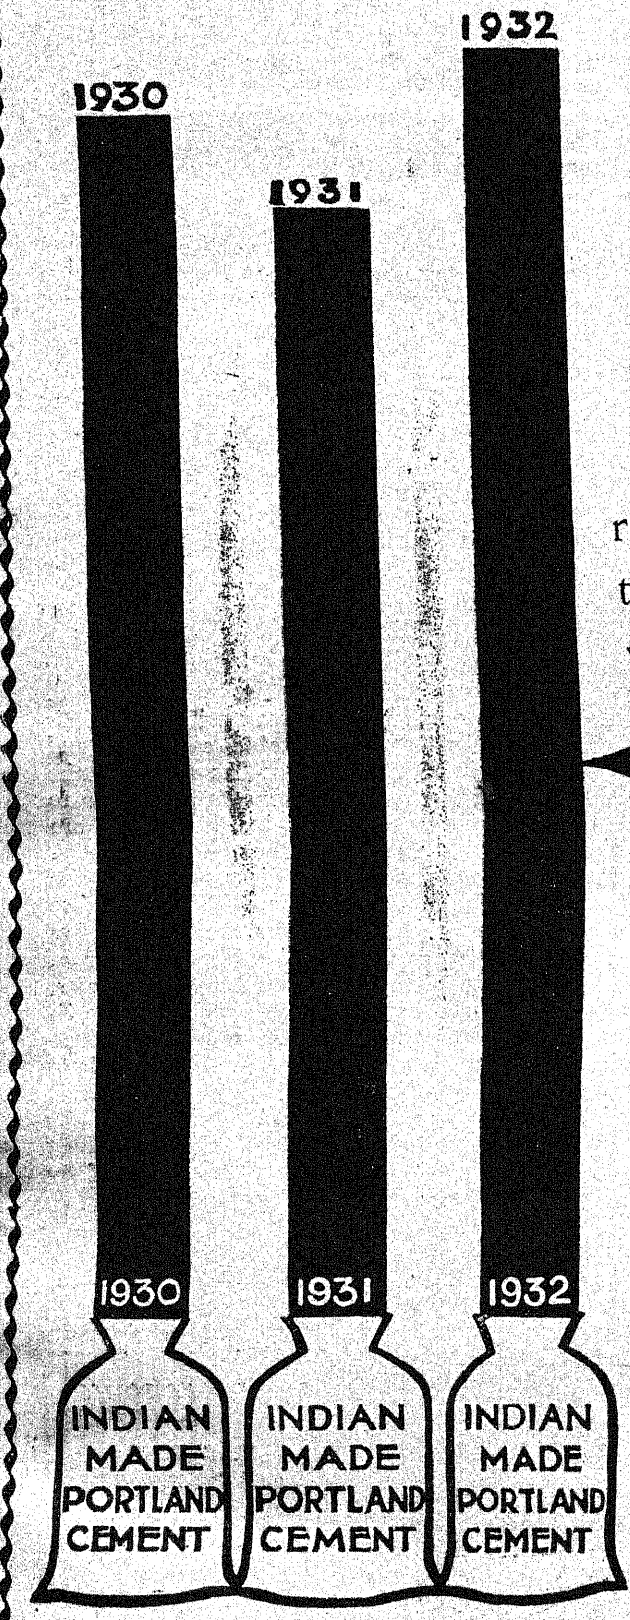
Clear Striking Proof!



In bad times items involving recurring expenditure in maintenance charges are subject to very severe scrutiny.

Look at this graph showing a comparison between the Cement Marketing Company's dispatches of Cement in the years 1930, 1931, 1932.

The first cost in a concrete structure is the last cost. With the dissemination of this knowledge, cement is being used in increasing quantities for the construction of buildings, roads, bridges, concrete products of all kinds, and also as cement mortar instead of lime mortar.

internationalism at any time? The internationalism about which we hear so much to-day was nothing more than a state of affairs obtaining two decades ago when the world was made up of ten strong nations and ninety weak ones. The latter are now striving to place themselves on a strong footing. For the greater part of the world, the cry is therefore, nationalism before internationalism. If, then, this economic nationalism is a hard fact and must be made the basis of any future plan, it means no more than this—that in the world that is now in the making, each nation wants to set its own house in order; and the stronger nations would do well to help the weaker in this attempt to set their houses in order. Only after these several units have stabilised heir position would they be willing to take part, sincerely and earnestly, in any plan for a world linking of the various units. Meantime, the problem is this: What exactly should be the plan on which these units should proceed? While there has been a considerable amount of literature on the various aspects of trade depression, there has scarcely been any attempt made so far to place before the weaker countries a suitable and practicable plan for the regeneration of their economy.

* * *

In such a plan there should be co-ordination of all the activities of each nation—co-ordination of the political, social and economic activities. Towards this end, I feel sure that most countries in the world would soon be having their own national economic councils. A good few countries have already established such councils. Russia is one, the function of which is to plan the entire economic activity of the country. In Germany, on the other hand, the economic council is a sort of liaison body between the Government and the business community. It is the model of Russia that will be copied by the nations in the endeavour to establish their position on a secure basis.

* * *

A more important aspect of the economic plan is the planning of the monetary policy. What is the kind of currency plan which would be most suitable in the kind of world situation that, I anticipate, is bound to come. If there is going to be a number of economic units and each one is going to have a plan of its own, then the planning of money is the most important factor in everyone of such plans. In that planning of a monetary policy, there should be a clear understanding of the purpose to be subserved by currency. Currency has two purposes—to function in the exchange of goods and services at home; and to secure the foreign currency needed for outside commitments. There are, thus, the domestic and the international aspects of currency. Until now, the tendency has been to emphasise, and even to exaggerate, the international aspect of currency and to pay little heed to the domestic side. No relief can come to the world until it is definitely recognised that internal commerce and the interests connected with it are far more important than external trade. In the case of India, I do not think that the external trade is even 5 per cent. of the total value of trade. For the sake of this fractional volume of trade, are we to lose all the advantages that a stable purchasing power of the currency in the domestic sphere could confer on the country? The stable purchasing power of currency is not a vague idea; the function of the currency authority would be to regulate the volume of currency so as to ensure that the index of wholesale prices would fluctuate within narrow limits.

* * *

If prices are to be regulated in this manner, it is necessary that each country must adopt a far more scientific and a far more reliable index of wholesale prices. It is also necessary that more accurate and more elaborate statistics should be maintained by the Government and other competent private agencies, so that in the light of day-to-day fluctuations, the central banking authority would be able to regulate the volume of currency in a way that would keep prices within specified limits. The technique which the central bank would have to use in this matter is very much like the present technique adopted by the Bank in the interest of maintaining a stable exchange. Discount rate and open market operations would be as potent factors for the regulation of currency and for the resultant effect on prices as they have been for the steadying of the movement of international funds and the maintenance of exchange within the upper lower points.

* * *

If, America and the British Empire, acting in unison in regard to the raising of prices, achieve a measure of success, they would have, within the dollar-sterling area which is over half the world, a kind of situation in which prices have been raised to a satisfactory level and in regard to which further steps for consolidation of the gains should be comparatively easy. Once stability is created over a large area as represented by the sterling-and-dollar groups, it would be time enough for nations to think seriously of the problem of international linking of national units. The problem for the immediate present is, therefore, the reform of local currencies in a way that their purchasing power in the domestic sphere would be raised and then stabilised.

* * *

So far as India is concerned, the application of this plan would be simple enough if only we had a free hand. I do not see why, when England could have depreciated her currency by 25 per cent., New Zealand by another 10 per cent. and Australia by a further extra 15 per cent., India alone should be asked to accept tamely whatever others say is good enough for her. Why should not India be allowed to decide that the ratio is a question which is strictly subordinate to the internal purchasing power of the rupee. An increase in prices in India, as in America, would have far wider effects than a like happening in any single country in the world. Every country is anxious to put its house in order. It is only America that has energetically set herself about the task. Great Britain will have to do the same but she has a much harder task. India also must do likewise but, comparatively speaking, she should not find it difficult. India's sufferings to-day are unquestionably accentuated by the devastating effects of an over-valued currency unit. To-day, America has the timely good sense to see the error of her ways and is taking steps to save her population from further misery and ruin. And yet a section of the complacent press of the world has the effrontry to call it an experiment. Well may America say that he laughs best who laughs last. The scoffers of to-day will not be the ones who will laugh to-morrow.

FUTURE OF WORLD CURRENCY

[In the following article, our correspondent "JNAN" endeavours to trace the lines on which the monetary and exchange policy of the principal countries and groups of countries might be pursued in the immediate future. Particular note is taken of the policy of Mr. Roosevelt and the statement issued last Saturday by the Delegations of the Empire nations to the World Economic Conference. "JNAN" takes the view that with internal price raising and repudiation of gold clause, where necessary the conditions necessary for a return to gold will have been fulfilled. But he holds that the gold standard must be sought to be stabilised on the basis of a planned national and international economy rather than the restoration of free trade.]

At no time during the course of the present depression was there greater uncertainty of monetary and currency policy than at present. This is due to the significant failure of the negotiations for stabilisation initiated by the Bankers' Conference in London and the total break up of the World Economic Conference which it led to. Within a day of the formal closing of the Conference, the Delegates of the British Empire nations met together and issued a *communique* to the effect that there was general agreement about the need for a common Empire policy designed to raise internal price levels and to maintain the stability of the inter-Imperial exchanges. This was also accompanied by a reiteration of the faith of the Empire Governments in the favourable effects of the inter-Imperial trade pacts concluded at Ottawa. This period is also significant for the final conversion of an economist of the standing of Mr. J. M. Keynes to the cult of planned economy. This should help to strengthen most nationalist governments in their present policy of reconstructing their national economies without any undue obsessions in favour of international trade. The question, therefore, arises how far the economic policy of self-sufficiency and the unquestionable need for some degree of order in ternational standard and exchanges are compatible and how the conflict between the two, if any, may be reduced.

There is also the somewhat theoretical question of what the national and international monetary standards would be like in the form of economic organisation of the more distant future. Personally, I believe that if in the future there is more or less communist or socialist economy, money will be no more than a title to a certain amount of current consumer's goods. It would be neither a store of value, representative of capital as we understand it to-day, nor even would it represent purchasing power to be used by its owner at any time he chooses. For the directors of the planned economy of the future cannot afford to take the risk of hoarded purchasing power coming into play at an unexpected moment and upsetting their calculations. In an economic scheme, in which the creation and renovation of capital equipment is achieved not by saving, as it is to-day, but by a more division of labour between those who produce consumers goods and those who produce capital goods, all that the individual would need is a bundle of notes which, on presentation, would procure for him the necessary requisites of life. The monetary authority might, therefore, justifiably set a limit to the period of time in which such purchasing power might be used, after which the notes would cease to have the value.

But these are in the distant future, though probably not so distant as many believe. What we mean by "future" in speaking of "The Future of World Currency" is the period, in which the present, or probably the next immediate, generation will have been relieved of the feeling of oppressive uncertainty about the value of money and the value of commodities which is now prevalent. In other words, by "future of world currency" we seek rather to indicate the lines on which we might attempt to escape from the present *impasse* of international monetary and economic systems. Before 1930, the problem of international money was conceived as one of securing the stability of prices and commodities in terms of gold. It was then believed that the change in the value of gold or, in other words, the heavy fall in gold prices, might follow from the shortage in the supply of gold. The work of the Gold Delegation was done on this assumption. The remedy suggested was that the central banks of the world should endeavour to economise the monetary use of gold and that their reserve ratios should be reduced to that end. Befor the Gold Delegation could complete its report, the international monetary problem had taken a decidedly different phase. Gold prices had fallen not on account of the materialisation of the fear that the stocks of the metal might prove insufficient for monetary purposes, but because of other factors, of which the maldistribution of available gold was the only one which could be easily detected and which could secure universal acceptance as one of the prime causes of the fall in prices. At this stage, the question was not only how the maldistribution should be set right but what safeguards would be necessary for preventing the recurrence of such maldistribution.

In this form, too, the problem of the international monetary standard did not show any serious or significant departure from the past. But before anything could be done to solve the problems as they were then apprehended, the maladies of the international monetary standard had been aggravated out of all recognition. The continuance of the fall in gold prices had made it increasingly difficult for countries to remain on the gold standard. And the nations, rather than attempt to stop the leak, began to desert the gold standard like rats from a sinking ship. Great Britain was the first among the important countries to abandon the gold standard. And with her came off gold the countries of the British Empire and the Scandinavian nations. And so long as the gold standard could count France and America among its adherents and so long as it was certain that Great Britain, as a principal exporting country, was deeply interested in the restoration of a stable international money, it was felt that the problem of resucitating the gold standard was comparatively simple.

Maldistribution was attributed mainly to the heavy favourable balances of France and the U.S.A. through reparations and war debts ; and criticism regarding the international monetary standard was only a demand that these two settlements should be revised. The abandonment of the gold standard by Great Britain opened the eyes of the world to the fact that the sufferings of the international gold standard are due more to chronic defects in world trade and economy than are signified by the disturbances caused by war debts and reparations. It was then recognised very clearly that the conditions necessary for the successful working of an international gold standard were not satisfied. Those conditions are (1) a free gold market, (2) gold being allowed to affect the currency circulation in a deflationary or expansionary way according as the stocks fall or rise and (3) balance of payments being allowed to change with the fall or rise in prices. In other words, free inflow and outflow of commodities and

services as well as gold was essential for the smooth functioning of any international gold standard, whether it is gold or any other substitute therefor. These are the conditions necessary for the working of the gold standard. But with more countries going off gold, being driven off gold rather, by the stress of the increasing unsuitability of the international medium of exchange, a different set of conditions came to be insisted on for the return of these countries to the gold standard. When the Preparatory Committee of the now suspended World Economic Conference first met and negotiated for the return of Great Britain to gold, Great Britain was found to insist on a rise in prices as a condition precedent to her return to gold. There must be, so to say, an international guarantee against the recurrence of the conditions which forced her off the gold standard.

I am not concerned with the reasonableness of this view in this article. I mention it only to point out that we have two different set of problems to-day. One is to secure the return of countries to the gold standard and the other to ensure its stable and efficient working. The abandonment of gold by Great Britain, in my opinion, lays emphasis on the latter, though the British view at the Preparatory Committee laid equal emphasis on both. The abandonment of the gold standard by the U.S.A. emphasises the first set of problems. America abandoned gold, not because she could not meet her international commitments in gold—she had none—but because the gold standard could not be supported at home without imperilling the whole economic structure. The increase in the burden of debts effected by the fall in gold prices was flattening out one and all. Hence the firm stand taken by President Roosevelt that he would not have anything to do with stabilisation, so long as the burden of debts was not lightened and a dollar of reasonable purchasing power was not re-established. A reference to President Roosevelt's statements, which I could quote if I had the space, would make my point abundantly clear.

The World Economic Conference, or rather the Monetary Sub-Commission, was the scene of a triangular fight between France representing a view which has little reference to the peculiarities of present conditions, Britain insisting on the conditions of free trade essential for the smooth functioning of the gold standard and America insisting on the conditions for a return to gold. There was no reason for Britain or France to feel so hopeful that once stabilisation was achieved, the return to gold and the continuance on gold would be easy. That is by the way.

The result of the failure of stabilisation is that America has a free hand ; and President Roosevelt is not deterred even by the break in commodity and stock prices. Britain is attempting to form what Sir Basil Blackett calls a "sterlingaria" with rise in internal price levels as the immediate objective. France and the gold standard countries affirmed their determination to stand by it ; and we may for the present take them at their word.

It is important to remember in connection with the sterling area that even, if there is not a regular pact between the Empire countries in regard to currency and exchange policy, the sterling area is already, to a large extent, a material fact and that, therefore, we can count upon a large number of countries following the lead of Great Britain in respect of currency and exchange policy. Both U.S.A. and the sterling area will be at one in the attempt to raise internal price levels, with the difference that the former might have unbridled inflationism. This difference is important to the extent that the stabilisation of sterling and dollar exchange will be put off farther. But in so far as both these areas are aiming at inflation they will be relieving their internal economy of the weight of an overgrown indebtedness and to that extent they will be paving the way for the resumption of some kind of international action. When the United States feels that prices have again been raised to a level at which debts are bearable it will be in a mood to discuss questions of an international monetary policy.

Together both the dollar and the sterling areas make a large part in the world, and it may be that when the United States and Great Britain agree on a common policy it will not be difficult to secure universal acceptance of it.

To relate these probable developments to the two different sets of problems that we discussed a little earlier, namely, the measures necessary to secure a return to the gold standard and the measures necessary to ensure the proper functioning of the gold standard. The first comprises the raising of prices to a level at which debts will again become bearable. That we have seen the United States and the Sterling area will both accomplish though, perhaps, to a varying degree. But it must be remembered that what makes the fall in gold prices so much of a calamity to world is that, not only the burden of debts within each country becomes intolerable, but the debtor countries find it difficult to discharge their foreign obligations in terms of the international standard—gold. In this regard, the repudiation of the gold clause by the United States of America both in respect of her internal and in respect of her external obligations marks a very notable progress. If debts are distinguished as external and internal, the burden of internal debts is relieved by a rise in internal prices. The external debts are relieved by an abandonment of the gold clause in all countries and the possibility of settling foreign obligations in terms of a depreciated currency, whether internal or foreign. It will thus be seen that when what President Roosevelt called national attempts at price raising have been completed and the repudiation of the gold clause becomes a fairly widespread practice, then the conditions necessary for a return to the international gold standard may be said to have been completed.

The second set of conditions are generally meant to signify, for instance, for Great Britain, a restoration of the regime of international free trade and international free lending of capital. .It is in these two spheres that the greatest uncertainty and in a sense, the greatest obstacles will be met with. It is certain that international free trade, as we knew it in the pre-War days, will never never come back, and resumption of international lending has been severely shaken by the fate of the League loans and the general shock to confidence resulting from a widespread repudiation of the gold clause. But the latter, in so far as it is common to many countries, will be less of a shock. In as much as free international lending is bound up with free trade it must almost be said that the days of both are gone. Once countries have been pursuaded to come back to the international gold standard, its safety must be ensured not by the time-honoured way of ensuring the free movement of capital and goods but by the preservation of balance in national and international economies by some degree of planning in national economy and integration of world economy. I, for one, can see no alternative to these. It is futile to hope that either through bilateral pacts or through multilateral pacts or a general fiat of the League of Nations, a general reduction in all import duties can be achieved throughout the world. World sentiment is not in favour of it. Nor do I believe that the requirements of world economy necessitate it. The restoration of free trade would only mean that maladjustments of a different kind make their appearance before long. And what is more, even if duties are reduced there would not be that degree of free trade on which the gold standard may be based with confidence. The future of world currency, therefore, lies in successful price raising and the co-ordination of the various currencies of the world through the medium of gold.

REPORT OF THE AUDITORS.

TO THE SHAREHOLDERS
OF THE IMPERIAL BANK OF INDIA.

We, the undersigned Auditors of the Imperial Bank of India, elected under Section 58(1) of Schedule II of the Imperial Bank of India Act, 1920, do hereby report to the shareholders upon the Balance Sheet and Accounts of the Bank as at 30th June, 1933.

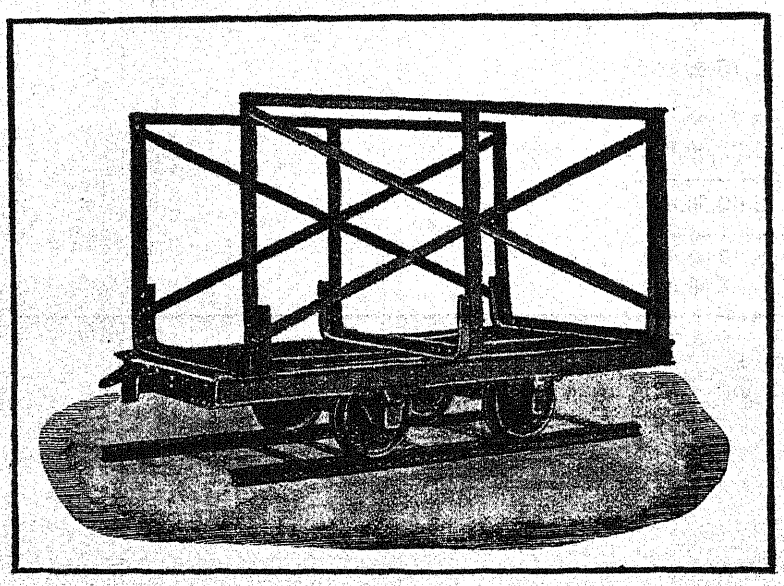
We have examined the above Balance Sheet with the books of the Central Office and of Local Head Offices and with the returns submitted and certified by the Branch Agents, and report that where we have called for explanations and information from the Central Board such information and explanations have been given and have been satisfactory. In our opinion the Balance Sheet is a full and fair Balance Sheet containing the particulars prescribed by the Imperial Bank of India Act, 1920, and the Bye-Laws of the Bank, and is properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs according to the best of our information and the explanations given to us and as shewn by the books. The Bank's Investments on Permanent and Floating Account are valued in accordance with the Bye-Laws of the Bank.

The audit at the Local Head Offices at Calcutta, Bombay and Madras has been carried out by Mr. J. B. Stanley, Sir S. B. Billimoria and Mr. J. V. Pirrie respectively, in addition to which the branches have been regularly inspected by the internal audit staff of the Bank.

Calcutta, 25th July, 1933.

J. B. STANLEY,
S. B. BILLIMORIA,
J. V. PIRRIE,
} Auditors.

SUGAR CANE TRUCKS



Four wheel or Double Bogie Type to suit any desired capacity

Manufactured by Experts at their Kidderpore Works, Calcutta,.

The following can be Supplied from ready Stocks.

Light Rails.	Motor Trollies.
Steel Sleepers.	Inspection Cars.
Track Fittings and Spares.	Tank Cars.
Turnouts and Switches.	Platform Cars.
Turntables.	Wagon Parts.
"Easy" Turnouts.	Wheels & Axles.
Factory Railways.	Roller Bearings.
Track Weighbridges.	Self-oiling Wheels.
Paraffin Tractors.	Axleboxes.
Steam Locomotives.	Buffers.
	Brakes.

Contractors to :—

War Office, Admiralty, Air Ministry, Indian Stores Department, Crown Agents for the Colonies, H. M. Office of Works and many Foreign Governments.

THE READING ROOM

Towards The Understanding of KARL MARX: By Sidney Hook: Victor Gollancz Ltd., London: 5/- net., Pages 288.

Karl Marx is the Badarayana of communist philosophy. His writings are as prolific in philosophic progeny as the Upanishadic texts of Ancient Hinduism. Indeed, communism is a religion, and more like Hinduism in that its worst dogmas are sought to be justified by a system of philosophy, peculiarly its own, as logical and free in abstract thinking, as bigoted and intolerant in actual practice. But nowhere is the similarity so striking as in the anxiety to justify every variation in practice in the light of hoary authority. Neither Sankara nor Ramanuja dared to propagate his philosophic ideas in his own name ; and each passes off his conclusions as a faithful interpretation of the philosophy of Badarayana. Nor did it occur to their commentators to judge their philosophies on their own merits ; they persisted in confusing the critical problem of what Badarayana himself intended with the philosophic question of which of the rival systems has the better appeal. Karl Marx has suffered a similar fate. And this is understandable; for among those who are dying to see the toiling masses come into their own, Marx is a name to conjure with. No idea, no programme, has a chance of acceptance that has not the Marxist sanction. And when circumstances and inclinations necessitate a change here and a change there, what is more natural than to foist every variation of doctrine and practice on the original inspired text itself? When the Marxist house is thus divided against itself, the attacks of capitalists and classical economists have told with double effect. The fundamental concepts of Marx's social philosophy have been torn out of their setting by Marxists and anti-Marxists alike. The relation of new discoveries of science and history to such concepts was naturally grossly misunderstood ; and not to speak of the contestants, the ordinary student hears nothing of Marx or his philosophy, except the curses poured on his name by his enemies or the downright criticisms of those who, no doubt, ordinarily academic in their outlook, never troubled to understand his meaning.

From this fate, Mr. Sidney Hook has attempted, with admirable success, to rescue Karl Marx. His work is not of a mere academic interest—though no layman can peruse its pages with much benefit to himself—for the world to-day sees a new light issuing from his doctrines. His social philosophy exercises a stronger influence upon the present age than the social theories of any of our contemporaries. Not only is a virtual continent given to the single-minded pursuit of his ideals, but our experiences during the last three years tend to resurrect his name as that of a seer, if not a prophet, from the opprobrium of a rebel against a well-established order of peace and amity. While the great Russian experiment has not yielded demonstrable results on which other countries can base definite programmes of action, the stress and complexities of the present depression bring daily converts to planning, in contradiction to the capitalism which Marx was out to overthrow. Though for a time the Fascist parody may appeal more to people clinging fondly to the exploded faith of *laissez faire*, there is no doubt that planning must inevitably lead to at least a rough measure of economic equality.

It is, therefore, imperative that at this hour of trial mankind must turn to the prophet of communism and endeavour to understand as best as may be the logical and ethical content of his ideology. That understanding has been rendered well nigh impossible by a number of factors. First, no one approaches the study of Marx without a predisposition in his favour or against him. Secondly, the current of history since his days has rendered more or less inevitable certain deviations from the paths struck out by Marx, even on the part of those who sincerely believed in their devotion to him. Thirdly, Marx's theories, though, no doubt, a homogeneous whole, strike his opponents as inconsistent at certain points and leave loopholes for doctrinal deviation and elasticity of practice. The discussions between his followers are, if anything, even more unhelpful to an understanding of Marx than the unsympathetic criticism of his opponents.

Mr. Hook divides his work into two parts: (1) The Quest for Marx, which, strangely enough, took the seekers farther from him till Lenin brought the Holy Grail ; and (2) The Philosophy of Marx which rightly shifts the emphasis from its content to its meaning and significance. It is difficult to understand how the quest for Marx led the seekers farther from him, without examining the trend of history in the half century after the death of Marx. Marx's was not an arm-chair philosophy. It was a realistic method of social action. The conditions, in which such action was to be taken, changed and were changing even while he lived. The soildarity of the international working class, which he might be thought to have assumed, was broken down by the rise of European nationalism and imperialism, which is the hateful issue of its union with capitalism. Nationalistic sentiment was fed and fostered by the enfranchisement of the working class and the opening up, as people then thought, of the possibility of transforming society through representation in a popular legislature. It was argued that the worker could not improve his standard of living, unless the industry as a whole made profits ; and if foreign markets were necessary for the industry to thrive, the interests of the working class demanded that it should vouchsafe the State the support necessary for winning and retaining such foreign markets. To the suggestion that in seeking its immediate interests the proletariat might end with garrisoning the capitalist stronghold, there was the ready answer that parliamentary government offered the scope for a gradual transformation of society. The Social Democrats of Germany represented the acme of decadence from Marxist fervour. Some of the ideas of Marx himself were cited in defence. It was argued for instance, that Marx himself admitted the expansion of capitalism as necessarily antecedent to the development of the crisis and the change over to the government of the proletariat.

Whatever the doctrinal justification or excuse offered by the Social Democrats, the actual effects of their policy are too well-known to need any emphasis. The approbation accorded to expanding capitalism broke the sentiment of solidarity in the international working class and opened the floodgates of war and carnage. Mr. Hook aptly points out that "Had the international protetariat been both sufficiently organised and genuinely Marxist, it might have transformed the World War into an international civil war and fought its way to socialism." The approval of Parliamentarianism, as a means of reaching the communist goal, had an even more disastrous effect in that it made work for the proletariat a bed of roses for socialist careerists, "the upstart, liveried lackeys of the bourgeoisie," as Trotsky once called them, with an excess of bile and spleen. Here, too, Mr. Hook has the trenchant remark that once it is made clear to these men that the class war is a serious affair and might even involve bloodshed, you will make a clean sweep of those "who have embraced the profession of thinking for the proletariat." But for the supposed Marxist sanction for the policy of tinkering with the

communist problem, the race of MacDonalds would never have arisen or, at any rate, would never have thriven in the way they have.

The Syndicalist reaction from the views and practices of German Social Democracy is no more helpful to a correct understanding of Marx. They took the view that the proletariat can have little to do in capitalist legislatures, however popular they may be in their constitutional basis. They referred to the Marxist theory of the State and held out for rigorous aloofness from its doings. They stuck to non-co-operation with the legislatures and trusted to the weapen of the general strike to bring the enemy down on his knees. The syndicalist party was a revolutionary party in embryo. But its methods were defective and its revolutionary zeal was dissipated. But its motivation was good in as much as it tried to correct the heterogeneous composition of the socialist parties and to convert a war of attrition for petty reform into a campaign of direct action for social revolution.

The Syndicalist philosophy of Sorel had thus exposed the insincerity and the blunders of Social Democracy. But it remained for Lenin in Russia and Rosa Luxembourg in Germany to rescue Marxism from the mists in which Syndicalists and Social Democrats had enveloped it. The latter bore traces of the Social Democratic doctrines in her belief in the collapse of capitalism after it has extended to the farthest limits of the world. Lenin denied the possibility of the end of capitalism in any such mechanical manner, unless it be that the whole civilisation goes down with it. But they agreed in opposing the rank fatalism of the Social Democrats who not only looked upon Parliamentary debates as progressive skirmishes in the class war but absolved the leaders of all responsibility for effective leadership. They decried the tendency of Syndicalists and Social Democrats to make a fetish of violence and non-violence. And though in their ideas about organisation they necessarily differed, owing to the differences in the prevalent conditions in Germany and Russia, their names may well be coupled as responsible for insisting that Marx's theories can be interpreted only in a rigidly practical manner, free of obsessions regarding any one of his doctrines.

It is to the corrective which Luxembourg and Lenin provided to the one-sided emphasis of earlier socialists that Mr. Hook probably owes the inspiration for a proper approach to the understanding of Karl Marx. To suggest this is not to detract from the originality of the author, but rather to enhance it, for Mr. Hook had reduced to a definite method what in Lenin might have been the promptings of expediency.

When ardent followers of Marx were themselves divided over what he meant, it is not to be expected that his opponents would understand him better. The differences among the followers were the result of over-emphasising some of his doctrines and ideas which are in proportion only in a schematic setting. In the eyes of the opponents they naturally appear as flagrant contradictions. In Marxist controversies, which are naturally within the sphere of heated party politics, there is little insistence on sympathetic understanding as a preliminary to sound and valid criticism. Mr. Hook rightly contends that "the critics who made so much of Marx's contradictory positions never made an attempt to find a point of view from which these alleged contradictions turned out to be applications of the same principle and purpose to different historical situations." Every one will readily agree with Mr. Hook that Marx did not write a text book filled with cold-storage truths. The purpose of Marx's intellectual activity was the revolutionary overthrow of the existing order; and that shines through all his writings. It was as a revolutionist that he approached his theoretical problems in sociology, economics and philosophy. For him they were the theoretical problems of the social revolution. Social science is class science; and what Marx meant by science is not what we mean by it, but criticism based on the observable tendencies of social development. His enquiry was disinterested only up to the point of deducing valid conclusions for his premises. Thereafter he frankly recognises his interest, only to use it to reveal the interest of those who are led by the fetish of impartiality to defend the indefensible in what is against what ought to be.

All this conflict of disinterested objectivity and interested revolutionary motivation is resolved in the dialectic method which is peculiar to Marx, and which is more distinctnive of Marx's thought than his problems or purposes or even conclusions. What is this dialectic? Dialectic, as it is ordinarily understood, is a process of disputation employed primarily to trip up a speaker by confronting him with his own inconsistencies. In Ancient Greece it was regarded as the process by which the structure of logical systems is discovered. With Hegel it is the process by which not logical ideas, but all things in the world, develop. Marx's dialectic method followed from his empiricism. He held that "if change is unreal, nothing else is real. Even if performance and invariance were characteristic of existence they could only be recognised in change and difference." The dialectic method of Marx is a way of dealing with what is both constant and variable in every situation.

The following gives Mr. Hook's description of the exact method adopted by Karl Marx:

> The dialectic method of Marx is a way of dealing with what is constant and variable in every situation It is the logic of movement, power, growth and action. . . . It is wider than scientific method, if the latter is narrowly conceived to assert "only that exists which can be measured", for although it accepts the findings of science as an accurate report of the structure of the external world, it recognises that there are other realms of experience, such as the arts and political affairs, in which qualities and activities are the fundamental organising concepts and not quantities. It distinguishes between types and levels of existence, investigates their interrelation, and synthesizes them in their order of temporal and structural dependence. In physics, the dialectic approach begins with the end-products of scientific analysis—its equations and abstractions—and instead of declaring as the metaphysical materialists do, "these alone are real," asks such questions as how these relational formulae are derived from concrete problems of practice, and how the invisible, inaudible, intangible world of mathematical physics is related to the many-coloured world of familiar experience. In biology, it accepts the descriptions of the ways in which the structure of organs condition their present functions, but seeks for the evidence of past functions in present structure and attempts to discover how at any given time both the specific structure and the specific function of any organ are related to the functioning of the organism as a whole. Behind the facts and figures of social life, it sees the grim realities of the class struggle; in the struggle, possibilities of social development, in possibilities, plans of action. Marx used it to solve problems in political economy with which the unhistorical "classical school" wrestled in vain." . . . . . Wherever the dialectic method is applied, it presupposes not the attitude of contemplation but of action. Freed from its idealistic *mesalliance*, it is genuinely experimental. It seeks objective knowledge of natural and social fact from the standpoint of the doer not the spectator. Indeed, the very meaning of what it is to possess objective knowledge of any ongoing process, involves the prediction of a future outcome, to achieve which, human activity enters as a necessary element.

Marx's dialectic is best understood in contradistinction to that of Hegel. With the latter it was a process by which, not logical ideas, but all things in the world develop. Marx's dialectical method, on the other hand, was primarily applied to human history and society. Here he did what Hegel could never have done with his blind deification of the Prussian State. "Without denying the enormous complexity of the factors involved he offered a guiding thread into the maze of social process. If followed it leads not only to a fruitful exploration of the past but to a course of action which may free mankind from its major social evils."

The detailed application of Marx's dialectical method, Mr. Hook contends, is to be found in his

economic theories, the materialistic interpretation of history and his philosophy of State and society. The beginnings are seen in his philosophy of culture. He does not like Spengler or Hegel invoke mysteries to explain cultural differences, but seeks the causes of cultural change within the social process itself and not in the realm of metaphysical abstraction. He tries to show how social change arises from the interacting processes of nature, society and human intelligence. The past grows whenever a new perspective in the present enables us to look back and see what has grown out of it. And revolution is the political mode by which social evolution takes place.

Such a view cuts at the root of the two opposite views that are entertained in different circles that Marx's communism signifies a break with the past or that his historic materialism is a form of historic determinism which leaves little room for the directive or creative force of social will. His perception of the social process and his recognition of the place which felt needs occupy in social objectives and social action preclude both a break with the past and the supine indifference to supposed inexorable trends of history. It takes one nearer to a realisation of the Marxist method if it is added that Marx's theories are not only historically conditioned but are also class conditioned, in that they offer a survey of social life and a plan of social action in the interests of the international proletariat. To the question whether the objectivity of his theories does not suffer by the recognition of a class purpose, Marx denied that history, economics and philosophy stand as impartial disciplines above the class struggle. Theories of history as history are necessarily subjective valuations, which are inevitably of a class character and enter into the selective appraisement of facts. Moreover, a true idea cannot, as Hegel maintained, be one which reflects or corresponds with the external environment. On the other hand, it is one which is validated by the outcome of the interaction between our practical activity which expresses the meaning of that idea and the external object it calls forth. Since, as the result of testing, some change has been introduced in the objective situation we seek to know, the correspondence between idea and thing is prospective and not retrospective. Such a view of the true idea saves one from the pitfalls into which pure objectivism throws us, on account of its tendency to degenerate into an apologia of the conditions it claims to describe without bias. Thus the *laissez faire* economist is innocent of any fervour for reform and even advocates periodical crises and unemployment as essential for the health of the body economic. The objective student of human capacities is a defender of existing inequalities. The objective truth of Marxism realises itself only in the informed revolutionary act.

With the exposition and explanation of Marx's dialectic method, Mr. Hook's main purpose is fulfilled. But it is essential for an understanding of Marx that some of the prime misconceptions in regard to his theories should be cleared. Of all the theories of Marx, none is so persistently misunderstood and, therefore, misrepresented as historic materialism. It has been already pointed out that Marx did not deny the place of either social or individual motives. There are numerous theories which attempt to assign to one factor a determining influence on history. Darwin, for instance, viewed it as no more than a biological struggle for existence. Feuerbach offered an incredibly ludicrous theory which attempted to explain the major trends of history by the findings of food chemistry. The geographical interpretation of history is still the spoonfeeding of infants in modern schools. There is also the school that attributes history to a complex of social motives and makes chance figure a great deal in the historical pattern. The special quality of Marx's interpretation is that he admits that climate, topography, soil and race are genuine conditioning factors of social and historic activity. But Marxists deny that they determine the general character of a culture or its historical development. It is the relation, not the conditions or the forces, of production which condition the general character of cultural life. In the perspective of time the phenomena of cultural lag, though, no doubt, of great importance in contemporary eyes, do not appear significant. The greatest historical fact is the division of all historical society into classes. A class, it will be remembered, is any group of people which plays a definite role in production. The prosperous classes are the ruling classes and in every epoch the prevailing ideology tends to consolidate the power and authority of the ruling class.

If this is recognised, it would provide an antidote to the misconception that historical materialism must necessarily be vitiated by a primitive monism according to which all efficient causes in history were material, not ideal. The answer is best furnished by Engels as below:

"The political, legal, philosophical, religious, literary, and artistic development rests upon the economic. But they all react upon one another and upon the economic base. It is not the case that the economic situation is the sole active cause and everything else only a passive effect. There is a reciprocal interaction within a fundamental economic necessity which in the last instance always asserts itself."

Marx's economic doctrines are the result of the application of historical materialism to the "mysteries" of value, price and profit. They are the result of his perception of the shortcomings of traditional economics which approaches social values in the same way in which the chemist approaches a dye. Historic materialism enables Marx to see the bourgeoisie society for what it is, a fetishism of commodities, with orthodox economics as its theology, which "thingifies" social relations and personifies the material instruments of life.

Capital, which ought really to be a mere instrument of production is a relation between two or more humans and is regarded as the former and not the latter. In all societies, in which the instruments of production are not held in common, the process of production is at the same time a process of human exploitation. The worker is paid less than what he produces, and profit, instead of being, as it should, the surplus of satisfaction over effort, is really the wages of the unpaid portion of the labourer's work. Such exploitation necessarily leads to the increasing riches of the wealthy classes. Through their power on men and, more, ideas, they consolidate their domination; and the class character is indelibly stamped on the State. The Government ranges itself on the side of the dominant classes; and peaceful transformation of society becomes impossible.

The class war and the dictatorship of the proletariat follow by the coercive force of logic. But these logical deductions do not blind Marx to the practical aspects. The mode of revolution is conditioned by hard facts. Every inevitable long period trend must be balanced by a practical condition of an opposite character. While it is true that capitalism must grow to the point of being unable to move its own limbs, it is futile to wait with folded hands for its natural end. It may be that the State is a class state and the enfranchisement of the working class does not alter its essential character. But every social movement is a political movement; and absolute indifference to political institutions would mean a hold up of the movement towards the proletariat State. Though the final establishment of that State may have to be accomplished by a *coup d'etat*, it is silly to make a fetish of violence and deny the place of peaceful propaganda. Likewise the common misfortune of being exploited by capitalists classes does point to the solidarity of the international working class. But it is torn by the national, racial and religious differences which the culture of capitalism breeds, teaches and intensifies. And they can disappear only when the capitalist State is overthrown.

Thus all the Marxist theories undergo a process of refinement in the heat of his revolutionary passion. Mr. Hook has well achieved his purpose of showing that Marx's interest in his theories has not deprived them of their objectivity, has, rather, enhanced their objectivity. Mankind has persisted for half a century in caricaturing his theories by obscuring the manner in which he conditioned them.

But it is not to be supposed that the balance emphasised in the foregoing tends to make of Marx a social eclectic, whom one and all may profess to follow without any qualms of conscience. To be a Marxist is to be a revolutionary. The essence of Marxism is the recognition that to believe in a theory one must be prepared to test it in practice. Otherwise, such convictions must be classed with rank superstition. It is this belief in force that makes Marx unacceptable to most socialists. Mr. Hook is perhaps, the ablest advocate of the revolutionary standpoint. We in India are committed to non-violence as a religious cult, a practical technique of revolution, a soul-satisfying philosophy and, probably as the dictate of expediency. There is hardly any virtue which Mahatma Gandhi would not claim for it. Considering the publicity and the following which Gandhi has had, not only in India but even abroad, it is natural that Mr. Hook should endeavour to give the quietus to what he regards as the false logic employed in his advocacy. Mr. Hook points out that, logically, it should be immaterial to Mr. Gandhi whether one million or 360 million lives is the price he will pay for winning freedom thrugh non-violence. In strict consistency, therefore, "Mr. Gandhi must be prepared to say that if India could win her freedom by a campaign of non-violence he would 'consider it nothing' if no Indians were alive to enjoy it." This syllogism shows the truth of the Marxist contention that what matters is the comparative human costs of continuance of an unsatisfactory state and its correction through force. Let me quote Mr. Hook:—

> "Hardly a major good has come down from the past, from the discovery of fire and speech to the latest developments of scientific technique, for which human beings have not paid a price in blood and tears. Both logic and morality demand, however, that before we reject a proposal because of its cost, we consider the cost of rejecting it for any of the available alternatives. The Marxist contention is that the costs of social revolution are far less than the costs of chronic evils of poverty, unemployment, moral degradation, and war, which are immanent in capitalism; that the ultimate issue and choice is between imperialistic war which promises nothing but the destruction of all culture, yes, of the human race itself, and an international revolution which promises a new era in world history".

The argument is only too tempting. One can only say that no one can be dogmatic about ideas of morality, which are rather a hierarchy of higher and higher excellences than any unitary dictate of reason. One may also view with suspicion the fineries of a too logical process. All that we may agree with Karl Marx or Mr. Hook is that the advocates of non-violence often, though not always, tend to become surer props of an inequitable order than its sworn defenders. They draw a sponge over the acts of violence committed with far less justification on their own comrades and co-workers, and throw cold water on revolutionary ardour. But modern Marxists overlook, with less justification than their preceptor that it is possible for competent leadership to take advantage of a crisis like the present depresssion to bring their ideas of a classless society nearer to fruition. Mr. Hook's interpretation of Marx, long regarded as an illogical fanatic, is at once faithful and logical. No one who condemns the iniquities of social and economic stratification can afford to overlook the light which Mr. Hook throws on the Marxist philosophy. And a correct understanding of Marx, when wide-spread, will obviate the application of the one point on which he lays all the emphasis he is capable of.

"JNAN".

(Continued from page 293.)

Dry Salted Cowhides.

The sales of Dacca dry salted were dull in the week but higher prices have been paid both by the shippers and the Madras tanners. The price of the mixed all round lots may be quoted as Rs. 4-12 to Rs. 5-4 per 20 lb. Prices for export qualities may be quoted as follows:—Mixed Dacca slaughtered Dry-salted (M.D.S.) quality about Rs. 6-8 per 20 lbs., while B.D.S. quality is being quoted at Rs. 8-8 per 20 lb. Stocks of B.D.S. quality are negligible in the market.

The prices in the Calcutta market for other varieties of hides may be quoted as follows:—

Cows.

	Per 20 lbs.
Dry framed Agra Arsenicated	Rs. 6 12 to 8 8
Darbhanga	,, 4 8 to 4 12
Patna	,, 4 0 to 4 12

Buffalo Hides.

	Per 20 lbs.
Dry arsenicated	Rs. 3 8 to 4 0

Goat Skins.

	Per 100 pieces.
Good quality	Rs. 120 to 150
Ordinary	,, 90 ...
Rejects	,, 45 ...

The goat skin market ruled easy and stocks in the market have increased to about 4 lakhs of skins. On account of lower American advices the prices offered by shippers were below the seller's ideas and hence business has been on a restricted scale.

Leathers.

The local leather market continues very dull and with the exception of local tanned Buffalo sole leather hides which are being quoted Rs. 5 to Rs. 8 per maund (of 82 lbs.) higher, the prices for other kinds of leathers, have remained at last weeks level. The Madras tanned hides and skin market continues very firm and prices have advanced by about ½ anna per lb. all round, while prices for calf skins have advanced by 1 anna per lb. Although London advices are not very encouraging with regard to tanned hide prices that are being offered by the curriers, the Madras market has registered an all round advance as stated above, specially on account of the decision of Periamet Jameat to continue the present minimum price agreement till the end of October. This has compelled the London buyers to increase their offers by ½d. per lb. To-day's price of tanned hides and skins in the Madras market may be quoted as follows:—

(Quotations per lb.)

Tanned Cows, Upcountries, (8/8½ lbs.) as. 10 to as. 11.
Tanned Cow, Upcountries (Lights) as. 13 to as. 13-6.
Tanned Cow, Bangalores (8/8½ lbs.) as. 11-3 to as. 11-9.
Tanned Cow, Bangalores (7/7½ lbs.) as. 11-6 to as. 12-3.
Tanned Cow, Bangalores (Lights) as 13-3 to as. 13-7.
Tanned Cow, Bezwadas (7/7½ lbs.) as. 11-3 to as. 11-9.
Tanned Cow, Vizianagarams (7/7½ lbs.) as. 11-3 to as. 11-9.
Tanned Cow, Ellores (7/7½ lbs.) as. 11-3 to as. 11-9.
Tanned Buffalo Hides, as. 7 to 7-9.
Tanned Buff Calf Skins, as. 11 to as. 12.
Tanned Cow, Calf Skins, Re. 1-1 to Re. 1-3-6.
Tanned Goat, Medium, Re. 1-8 to Re. 1-12.
Tanned Goat, Patna, Re. 1-2 to Re. 1-6.
Tanned Sheep, Medium, Re. 1-10 to Re. 1-14.
Tanned Sheep, Inferior Medium, Re. 1-4 to Re. 1-8.

TRAVANCORE FINANCES

(From a Correspondent).

Trivandrum, 31st July.

TRAVANCORE FINANCE.

In presenting the Budget for 1109 M. E. (August 1933 to Augst 1934) Mr. R. Nilacanta Pillai, the Financial Secretary, first explained the nature of the changes necessitated by the constitutional Reforms Regulation.

ACTUALS OF 1107 M. E.

(August 1931 to August 1932)

The ordinary Revenue and expenditure charged to Revenue for 1107 were Rs. 219.28 and Rs. 218.90 Lakhs respectively against the revised estimate of Rs. 215.42 Lakhs and Rs. 221.42 Lakhs. The year, thus, closed with a small surplus of Rs. 38,000 as against the anticipated deficit of Rs. 6 Lakhs.

REVISED ESTIMATE FOR 1108 M. E.

(August 1932 to August 1933)

The estimates for the current year were Budgetted from aggregate Revenue of Rs. 223.19 lakhs and provided for a programme of expenditure to be met from Revenues, of Rs. 222.04 lakhs, leaving a surplus of Rupees 1.15 lakhs. On the basis of the actuals so far known, the Revenue is expected to stand at Rs. 232.88 lakhs and the expenditure charged to Revenue at Rs. 231.71 lakhs. The current year is, thus, expected to close with a Revenue surplus of Rs. 1.17 lakhs.

BUDGET ESTIMATE FOR 1109 M. E.

(August 1933 to August1934)

The Budgetted Revenue for the next year is Rs. 230.04 lakhs as against the current year anticipated Revenue of Rs. 232.88 lakhs, i.e., the forecast for the ensuing year is Rs. 2.84 lakhs less. The Budget proposals of the Head of Departments for the next year were subjected to a close and careful scrutiny and the normal requirements of all the Departments provided for. The important Nation Building activities were also considered and funds provided as far as possible. The programme of expenditure charged on the revenue of next year is thus estimated at Rupees 229.25 lakhs. Among new schemes under Land Revenue is one for the introduction of a Re-survey and Re-settlement.

EDUCATION.

The allotment proposed for the next year under Education is Rs. 47.48 Lakhs which is Rs. 1.64 Lakhs more than what is expected to be spent this year. The increase is shared mostly by Collegiate Education (.33), English School Education (.31), Vernacular Education (.52) and Miscellaneous (.25). The Education Reforms Committee constituted this year with Mr. R. M. Statham C. I. E., as President to enquire into the present Educational system in the State and to advise Government as to the Reforms to be effected has completed its sittings and the report has just been received.

INDUSTRIES.

With a view to enlarge the activities of the Industries Department, steps have been taken to open Sales Depots, to train students in Dyeing and Printing Rattan and Basket making, Embroidery, Durri and Carpet making and Lacquer Work..

MEDICAL AND PUBLIC HEALTH.

With a view to increase the growing popularity and usefulness of the Ayurveda Hospital, Trivandrum, the number of beds for inpatients is to be increased. The scope of the Pharmacy is to be widened and students are to be deputed for training in Ayurveda College of Hindu University, Benares and the Government School of Indian Medicine, Madras. The Public Health Department formed five years ago is to be made permanent and all Public Health Department will receive greater attention under.—

1. Public Health Education and Propaganda,
2. Hookworm treatment campaign,
3. Epidemiology and vital statistics,
4. Health unit, and
5. Filarial survey and medical entomology.

CO-OPERATIVE DEPARTMENT.

In view of the recommendations of a mixed Committee of Officials and Non-officials to examine the present condition of the Co-operative movement in the State, provision has been made in the Budget for 1109 M. E., for the purchase of House sites in Urban areas for 1109 M. E., for the purchase of House sites in Urban areas for the depressed classes and for sinking wells in their colonies and settlements. The office of the Protector of Depressed Classes is also proposed to be slightly strengthened on account of additional work.

SUPERANNUATION ALLOWANCES.

With a view to afford relief to the family of Officers in the Government service dying in harness or within one year after retirement, a scheme of compassionate gratuity has been introduced with effect from middle of November last. The minimum service required for the grant of gratuity is five years service qualifying for pension. The gratuity will be calculated at one month's pay for every year of the qualifying service based on the monthly pay on the 1st of each year. The maximum service for which the gratuity will be allowed is 30 years. The maximum monthly pay for calculating the gratuity has been fixed as Rs. 400 and the maximum amount of the gratuity is Rs. 3,000. This reform introduced is over and above the grant of pension under the usual Rules.

LAND MORTGAGE BANK.

This Bank which was opened last year grants loans for the liquidation of prior debts on land, the minimum and maximum limits being Rs. 250 and Rs. 3,000 respectively. Loans to the extent of over 3 Lakhs have already been sanctioned by the Bank up to May last. A sum of Rs. 3 Lakhs has been provided in the next year's Budget for an over-draft accommodation to the Bank.

WATER WORKS.

The Water Works for the Town of Trivandrum are nearing completion. The main supply line, the Filter House and the Low Level Service Reservoir have practically been completed and Town distrubution pipes have been laid for nearly 68 miles. The Dam masonry at Arivikarai, the work of the High Level Reservoir and the erection of street fountains are in progress. A provision of Rs. 3.43 Lakhs has been made for the ensuing year which will bring the whole cost of the work to about Rs. 50 Lakhs. It is expected that it will be possible to commence distribution of water by midde of August.

ELECTRIC SCHEMES.

The proposed allotment of Rs. 1.43 lakhs for the next year includes Rs. 1 lakhs under incomplete works for the installation of a fifth generating set and for the extension of the office buidings. The total cost of the Scheme at the end of the current year is expected to stand at Rs. 6.68 Lakhs. The net Revenue works up to about 5.6 per cent. of the capital outlay on the Scheme.

The capital cost of the Telephone Scheme will stand at Rs. 1.01 Lakhs at the end of the current year and at Rs. 1.13 Lakhs at the end of the next year. The net Revenue from the Scheme as per Budget estimate is Rs. 5,690.

PALLIVASAL HYDRO-ELECTRIC SCHEME.

This Scheme has undergone considerable alterations in in its design and layout since it was discussed in the last Budget Session. The Scheme as now sanctioned for execution provides for a Water Tunnel (Approximately 10,000 feet length), 2 pipe lines (each approximately 8,000 feet length and intended to discharge 30 Cusecs of water), three Generating Sets each of 5,000 K. V. A. capacity, 3 sets of Transformers for stepping up the generation voltage of 11,000 to 66,000, 74 miles of Double Circuit, 66,000 volt lines, 34 miles of Double Circuit 33,000 volt lines, 52 miles of 11,000 volt single circuit lines in addition to 45 miles of 400 volts and 4 wire distribution net work. The area of supply covers the High Ranges Alwaye, Kothamangalam, Kottayam, Changanacherry, Thiruvella, Alleppey, Shertallai, Kuthiathodu, Thycattuseri and the Punja fields. The sanctioned estimate for the scheme now is Rs. 70.8 lakhs and it is proposed to carry out the whole work immediately instead of in stages as originally intended. In view of the possibility of the development of large industries at Alwaye and its neighbourhood, the extension of the supply lines to these areas has now been provided for. This will necessitate the installation of an additional Generating Set in the Power House and Pipe Line. Double Circuit Transmission lines are now provided as against Single lines originally included. This is intended to safeguard the continuity of supply against any interruption due to lightning or other causes. In view of the unreliable nature of the country through which the water course from the Munnar River to the forebay was originally proposed, it is now decided to drive a tunnel through the hills to safeguard against any interruptions in the water supply on account of any slip

THE GATEWAY OF INDIA

(From Our Correspondent).

August 2.

The Bombay Indian Merchants Chamber—India's guide in commercial matters: And Mr. J. K. Mehta its soul and source of influence: Mr. Vissanji defends Indian Industrial Interests: Mr. H. P. Mody's dalliance with Lancashire: Liquidation of Messrs. R. D. Tata & Co.:

It is not any parochial love or complacent patriotism which makes me claim for the Indian Merchants Chamber of this City a premier place amongst Indian commercial bodies. Especially since the agitation against two shillings ratio, this Chamber has come to hold a dominant position; and the other chambers in India look up to it to give a correct lead in matters that pertain to Indian trade, finance and industry.

For one thing, it has, on the list of its members, some of the leading and most experienced of Indian businessmen. For knowledge of practical business, the Indian Merchants Chamber is fortunate in having members connected with every manner of commerce or industry. It can, therefore, always have the benefit of advice inspired by versatile, varied and intimate experience.

At the same time, the academic outlook has never been neglected. Well-informed economists like Professor K. T. Shah, Mr. Manu Subedar, Mr. N. M. Mazumdar, the late Mr. B. F. Madan and for sometime, Dr. R. C. Rawlley have always commanded a respectful hearing; and in the formulation of views and the final drafting of memoranda, erudition has played an important part.

This combination of practical businessmen with academicians is responsible for the emergence of a new type of leaders in finance and economics. Mr. Manu Subedar and the late Mr. Madan may be said to represent the type of leaders whose erudition is stabilised by practical experience and whose practical instinct is illumined by correct and scientific knowledge. For a decade and a half, the Indian Merchants Chamber has enjoyed the fortune of free and ungrudging service from men of this calibre.

It is, therefore, no matter for surprise that what the Merchants Chamber thinks to-day, the rest of Indian commercial India thinks to-morrow.

It may be that, on occasions, the Chamber's opinions are unduly coloured by Bombay's purely local needs and requirements. It may also be that, now and again, the propaganda for any particular interest of the Western Capital is conducted so adroitly as to make out that the issue at stake is really of all-India importance. But who will say that the Indian Merchants Chamber is doing anything wrong or unusual if it gives due and proper importance to the local problems of its own province?

This charge of parochialism, which one sees urged not infrequently, is partly due to lack of clear thinking and mostly due to the very parochial nationalism which the example and success of the Indian Merchants Chamber has provoked in other provinces.

Apart from its legitimate concern in all that concerns the Bombay Presidency, the Indian Merchants Chamber has, as a rule, furnished a correct and reliable initiative as regards all-India questions of financial importance which have engaged public attention in the past fifteen years. Was the Chamber wrong in opposing two shilling ratio with all its strength and in appealing to the Indian commercial public to oppose it with a like vehemence? Could there be any blame in its reiteration in favour of sixteenpence ratio? And when eighteenpence was decided on, was not the Chamber doing but what was expected of it, in launching a country-wide agitation? How much better would our currency reserves be if the views of the Chamber as regards gold exports had been accepted by the Government? In the clarification of a correct, wholesome and balanced policy of protection towards industries, who has rendered more yeoman service than the Indian Merchants Chamber?

If it is the guide of India in commercial matters, the Indian Merchants Chamber is the inspiration and model in the matter of the creation of chambers of commerce in most of the important centres of this country. In Lahore, Cawnpore, Rangoon and Calcutta, new chambers have been started, with regard to which considerable assistance has been rendered by the Indian Merchants Chamber. In some of these chambers, even the secretaries are men who have had their training in the parent body at Bombay.

Talking of secretaries, I must perforce refer to the part that Mr. J. K. Mehta, the Secretary of the Indian Merchants Chamber, has played in the growth development and consolidation of this Chamber. Those who know Mr. Mehta would realise that in his ideal of life and his mental equipment, he is more fitted to serve the populace than the capitalistic class. He is a true and sincere nationalist; and he is the simplest and most modest of men. The Congress rather than a commercial chamber should form the proper forum for him.

Yet, he has served the Chamber with a fervour and devotion which is at once spontaneous and earnest. In this service, he has really believed that if only the vested interests could be made to understand that they could not protect their interests unless they sought, at the same time, to safeguard and protect the interests of the voiceless millions, he was bringing the large body of capitalists into harmony with national interests. Who would say that Mr. Mehta has not succeeded in an objective which he saw clearly and which, others might have felt, was difficult of achievement?

Presidents have come and presidents have gone; but the Secretary, Mr. J. K. Mehta, has gone on for ever. Inducements of various kinds and of a dazzling kind have often been presented to him. Sir Thomas Holland was so fond of Mr. Mehta that he wanted to absorb him in the Munitions Board and later in the Industries Department of the Government of India. The Tata Industrial Bank was keen on securing his service as its Secretary. But Mr. Mehta stood unmoved by these blandishments. To him the opportunity of service to the Indian Merchants Chambers was far more important. In any other career, Mr. Mehta might have been drawing a far bigger salary. He might have made a considerable fortune. But he has been content to be the man behind the scenes in all that happens and concerns commercial and industrial interests in India.

Such is the service rendered by the Indian Merchants Chamber to India. It has shown the other provinces what organised commercial opinion of each province could do for the betterment and safeguarding of local interests. It has inspired every other Chamber to greater activity and sturdier advocacy. It has, through the inspiring influence and example of its Secretary, brought into being a body of careful and efficient secretaries for other chambers.

Amongst the many features popularised by the Indian Merchants Chamber for more lively activity in commercial bodies is the system of quarterly meetings. The second quarterly meeting of the Chamber was held last week-end; and Mr. Mathuradas Vissanji, the Vice-President, made a comprehensive review of various current problems.

The first subject to which he devoted attention was, naturally, the attitude of the Viceroy to Mr. Gandhi's request for an interview. Mr. Vissanji pointed out that the Mahatma's request was unconditional and that he, as "a lover of peace, wanted to

find a way by which peace could be had." The Viceroy also has often proclaimed that what is needed is better understanding and peace in the land. Was it wise on his part that, on a plea suggested by notions of prestige, he refused to avail himself of an opportunity which should certainly have resulted in a better understanding? This remark of the Chairman was responsible for a retort from Mr. M. A. J. Noble that the Viceroy was perfectly justified in turning down Mr. Gandhi's request as he refused to withdraw his Civil Disobedience Movement. There was a discussion on this question; and the general feeling was that a golden opportunity had been missed.

Mr. Noble, who is generally known as a companion of Sir Dinshaw Wacha, is always taken as a man with somewhat queer views. All the same, he is one of those who have no hesitation or fear in expressing their frank opinions.

In the course of his remarks, the Chairman showed how the recent tariff changes in India failed to evoke any sense of appreciation from Lancashire but only resulted in causing embitterment in Japan. Mr. Vissanji said:

> "With regard to textiles, Japan has mostly taken the place originally occupied by Lancashire and has also been seriously encroaching on the field occupied by the Indian textile industry. It is interesting to note that Lancashire has been resenting even what little India has been able to do for her industries with increased protection, though there is a very strong preference shown for Lancashire as against non-British countries. Japan has been similarly wrathful against these protective duties."

As regards any likely negotiations with Lancashire, Mr. Vissanji insisted that representatives of Indian commercial community should be specially selected for the purpose and that too by the community itself.

Mr. Vissanji was not happy at the proposed continuance of 1s. 6d. He sounded a note of warning that no commitments on behalf of India should be made without previously consulting Indian commercial community not only in this matter but also in regard to the whole scheme of the Reserve Bank.

As for the Statutory Railway Board, Mr. Vissanji furnished the sole test that should be applied, namely, its effects on the development of Indian industries.

One might be permitted to add that Mr. Vissanji has been somewhat narrow in his outlook when he makes out that it is only the industries that have the sole say as regards the proposals for a Reserve Bank and Statutory Railway Board. There are quite other important interests which should have an equally important say in the matter. The criterion of either the Reserve Bank or the Railway Board is not whether it promotes the industrial interests of India but whether it promotes the national interests in all the different aspects.

There will be the strongest opposition from all quarters if any attempt be made to make the Reserve Bank or the Railway Board come under the dominant influence of only the commercial bodies. Agriculture is, for instance, a far more important section for whose well-being special safeguards should have to be taken in the devising of the plans for the Reserve Bank and the Railway Board.

In the third week of July, *Reuter* informed India by cable of the impressions of Mr, H. P. Mody, Chairman of the Bombay Millowners' Association, on his visit to Lancashire. The Air Mail has brought in a more complete version. One could see that in skating over thin ice, Mr. Mody is quite adroit. He sets out, in the first instance, to placate Lancashire. As proof of his *bonafides*, he draws pointed attention to his strong support of the Ottawa Agreement. He reiterates that he believed it to be, for many reasons, in the best interest of India. Quite a large number of his compeers in business in Bombay and other parts of India would question the wisdom of his belief and the disinterestedness of his motives.

Be this as it may, Mr. Mody proclaims that Ottawa has shown that solicitude for the interests of one's own country is by no means incompatible with consideration for the interest of others. He continues:

> "The great problem which faces both the Indian and the British cotton industries at the present moment is that of Japanese competition. I wonder if Lancashire sufficiently appreciates the fact that it is owing to the action taken by the Government of India at our instance, that she enjoys a preference in the Indian market such as she has not obtained in any other part of the world.
>
> The significance of this is that a policy which was right and proper from the Indian point of view happened to fit in with the interests of the British export trade.
>
> It is difficult to foresee exactly what the future has in store, but it is quite possible that, in many directions, similar circumstances may arise in which measures can be taken by India which could serve, at one and the same time, the best interests of both countries.
>
> Given the necessary goodwill, we should be able to exploit all such possibilities to the common good. On the basis of reciprocity, it may even be possible for India to modify a particular policy so as to fit in with the requirements of British trade in return for modifications of British policy designed to confer advantage on some Indian interest."

It is obvious that in this plan of reciprocity, the common enemy is to be Japan. Whether any tangible proposal can be worked out in a way that will adequately protect the Indian textile industry and that will at the same time be considered sufficiently attractive to Lancashire, is doubtful; at any rate, one is entitled to show scepticism in a matter in which the two negotiators are parties who have so far shown a complete self-absorption in their own, and only their own, interest. Lancashire is used to dictate as to what should be done and what should not be done. Bombay, too, has learnt the art of pertinacious and effective demand. The demands which each side will make would err on the side of extravagance. Only the future can show how accommodativeness is possible.

After all these nice things which Mr. Mody has said to Lancashire, he deems it prudent to add a note of warning. This warning is mainly intended for ensuring that no suspicion is aroused in the minds of the Indian public. Mr. Mody's warning is this:

> "Lancashire will recognise that it would be very difficult to work for co-operation between the two industries, if responsible people in Lancashire were at all to maintain an attitude of hostility towards the legitimate demands of politically minded India.
>
> If it were felt in my country that Lancashire interests could be relied upon to lend their support to a solution of the political problems of India, which would be in harmony with the views held in every responsible Indian quarter, and if, moreover, it was made clear that Lancashire freely acknowledged the right of India to frame her policy, whether in regard to tariffs or to any other measure, with reference to her own needs, a situation would be created in which men of good will in both countries would be able to co-operate, and formulate a basis for future relations such as would be fair and satisfactory to both."

All this sounds quite nice and sweet. But what is the actual position? Here is the White Paper which no decent Indian would accept except after considerable modifications—modifications so far-reaching and important that it would mean a re-writing of the White Paper. While the minimum that India wants is very much more than what is contained in the White Paper, Mr. Mody's friends in England—even the most progressive of them—argue on the basis that the White Paper is the maximum.

One might go so far as to assume that Lancashire would back the White Paper. But that would not be sufficient as an appeal to the Indian community for the successful fruition of a reciprocal trade plan between India and Lancashire. Is Lancashire prepared to support a scheme of reforms with less safe-

guards and more progressiveness than are to be found in Sir Samuel Hoare's pet scheme. If the answer is in the affirmative, Mr. Mody can come back to India with the hope that he could persuade his countrymen to agree to an arrangement which will serve the mutual interests of the Indian and British textile industries.

It would have been more to the point if Mr. Mody, in the course of his statement, had made it clear that unless Lancashire was prepared to be more progressive not only in comparison with Churchill school but also in comparison with Sir Samuel Hoare, the hopes of a friendly and amicable settlement are very slender.

The advertisement columns of our morning papers contained the notice announcing the liquidation of Messrs. R. D. Tata & Co., Ld. It is a great pity that a Company started under powerful auspices and with an ambitious programme should thus come to a violent end. It was about twelve years ago that Mr. R. D. Tata decided on handing over all his private and personal business to a private limited company under the name and style of Messrs. R. D. Tata & Co., Ld. Barring Mr. Tata and his friends and associates, the only other important shareholder was the Maharaja of Darbhanga.

The capital of the Company was Rs. 1½ crores, made up of Rs. 50 lakhs of participating preference shares and Rs. 1 crore of ordinary shares. The Maharaja held all the preference shares and Rs. 15 lakhs of the ordinary shares. The shares were prized greatly but no outsider could get any.

This was the concern with which the late Mr. B. F. Madan was actively connected. It had ramifications in Burma, China and Rangoon. It did a big business especially in cotton. Thanks to the unsettlement and uncertainty that had prevailed in international trade, the Company fell on evil days.

The general investing public of Bombay are, as such, unaffected. But it must be a rude shock to the Maharaja of Darbhanga. The present Maharaja's father was, perhaps, the most powerful and the most generous patron of Indian industry. Amongst men of his class, there was not another who had a like enterprise and who invested so freely and so largely in industrial concerns. Another concern of Tatas in which he took a big stake is the Tata Iron and Steel Company. Both in Calcutta and Bombay, for all concerns that were sponsored by respectable agents, the late Maharaja extended his fullest confidence. Anything that might administer a shock to the present Maharaja who must have inherited great faith in India's industrial potentialities is deplorable in the sense that it might mean that investment from him might be of a more restrained character. The capital market of India cannot afford to forfeit the confidence of this princely investor.

Bar gold valued at Rs. 73,45,714 was exported to England and Europe from Bombay during the week ending July 29.

The mail steamer, "Rawalpindi" sailed for London, on Saturday, with a consignment of the precious metal valued at Rs. 61,21,964. Out of this consignment, a portion worth Rs. 14,40,697 is destined to London optional New York, Paris or Amsterdam, another portion worth Rs. 12,59,119 to Marseilles and the rest to London. The "Conte Verde" sailed earlier in the week, with gold valued at Rs. 12,23,750 for Venice.

The total amount of gold exported from Bombay since Great Britain went off the gold standard now amounts to Rs. 1,46,66,00,350.

"WATCHMAN."

Mr. R. G. Saraiya writes :

I must thank "Watchman" for the flattering terms in which he has introduced me to your readers in your issue of June 10, 1933. His mention of me in your valued paper made me feel as if I was "mentioned in despatches". I would not have troubled to trespass on your columns in answer to Watchman's "logic of facts", had it not been that subsequent events have brought again into the limelight the question of the imports of foreign cotton in India.

My friend Mr. Watchman—I believe I know him—quotes me as under :—

> "It is far better for India to import foreign cotton of longer staple and spin finer counts in her own mills than to import foreign cloth of finer quality. After all, the spinning of finer counts means employment of Indian capital and Indian labour."

He then adds :

> "This explanation would not convince the village-folk though the city-folk may see logic, force and reason in it. For, the village-folk understand only the hard logic of facts."

Now may I be permitted to draw the attention of your readers to the logic of facts as revealed in the following figures :—

Statement of the quantity (in lbs.) and the Counts (or numbers) of Yarn Spun, in India.

Numbers or Counts	1928-29	1929-30	2930-31	1931-32
1—10	78,887,734	105,463,360	113,588,158	116,985,514
11—20	303,135,800	387,918,822	400,150,519	445,154,890
21—30	213,013,236	271,824,310	259,689,569	293,955,598
31—40	37,487,974	46,365,137	60,746,714	71,073,075
Above 40	10,029,271	15,278,339	27,310,831	34,001,363
Waste etc.	5,741,941	6,709,881	5,792,771	5,236,192
Total	648,295,956	833,559,849	867,278,562	966,406,632

From the above table it will be clear in what direction the expansion of the Indian Mill Industry has taken place recently. The rate of expansion is the highest in counts above 40s. and 31-40s., which by no stretch of the imagination can be produced in commercial quantities from available supplies of Indian cotton. It will be conceded at once that the Indian Mill Industry does not live on the exports of Indian yarn or Indian cloth to foreign countries but has to subsist on the demand from India. It follows then that the people who are using this yarn of 31-40s. and above 40s. are Indians themselves. If you handicap or stop the imports of foreign cotton, you handicap or stop Indian Mills from spinning higher counts and make the way clear for imports of yarn and cloth from foreign countries. Increasing the import duty on raw cotton would, really speaking, be playing into the hands of Lancashire interests, because there is a duty of only 25% against Lancashire and 75% against non-British piecegoods. If the duty on raw cotton is increased to a point at which, it practically negatives the protection against Lancashire and it can do this by raising the cost of raw materials to the Indian mills, and simultaneously reducing it to non-Indian mills—the way is made clear for imports of Lancashire goods into India and the stopping of Indian mills working on finer counts.

Instead, therefore, of condemning the consumption of foreign cotton by Indian mills, "Watchman" should turn his attention to the consumers of fine cloth in India. Here again I have a word to say for the preference shown for the fine dhotis or shirts made of 30s. over the coarser which, no doubt, "Watchman" prefers. The demand for finer cloth is based not only on the fancy of the people but also on the climatic conditions of the country. A certain proportion of the Indian demand is bound to be for finer cloth, and it is bound to be reflected in a demand for finer cotton. As India does not, at present, produce, in any commercial quantity, cotton suitable for spinning above 30s., such demands must be met by the imports of foreign cotton. This is the logic of facts behind the imports of foreign cotton. I would like to see Indian mills turn out finer counts even out of imported cotton and to that extent offer employment to Indian capital and Indian labour and Indian talent rather than import fine yarn from Lancashire and mercerised cloth from Japan.

FROM OUR READERS

INDIAN FINANCE AND FINANCIAL JARGON

SIR,

There is a tide in the affairs of men,
Which, taken at the flood, leads on to fortune;
Omitted, all the voyage of their life
Is bound in shallows and in miseries.

Those lines were written some considerable number of years ago by one named Shakespeare, of whom you may have heard. At least, some people say Shakespears wrote them; others maintain that a gentleman of the name of Bacon was the author. There has been much controversy on this subject and millions of miles of matter have been written about it. Perhaps, the most erudite of the differing views is expressed by a character in one of P. G. Wodehouse's recent books.

"Who is that girl?" asked Archibald of his friend Algy, pointing to a divinity on the other side of the street. "Tell me about her. I mean, has she any fathers or mothers or any rot of that description."

"Only an aunt. She lives with her in Park Street. She's potty."

Archibald started, stung to the quick.

"Potty? That divine. . . . . I mean, that rather attractive looking girl?"

"Not Aurelia. The aunt. She thinks Bacon wrote Shakespeare."

"Thinks who wrote what?" asked Archibald, puzzled, for the names were strange to him.

"You must have heard of Shakespeare. He's well known. Fellow who used to write plays. Only Aurelia's aunt says he didn't. She maintains that a bloke called Bacon wrote them for him."

"Dashed decent of him", said Archibald, approvingly. "Of course, he may have owed Shakespeare money'.'

Now, Sir, you may be wondering what on earth I am writing about in quoting from Shakespeare and in discussing the Shakespeare-Bacon controversy but I assure you that both quotation and discussion are very much to the point.

In the first place, the tide in my affairs in the matter of *Indian Finance* has arrived; and if I don't take it now, I shall find myself in shallows and miseries. And, in the second, the question of the owing of money brings me directly to my point.

Week after week and month after month, you state that money is practically unlendable; that lenders are plentiful and borrowers are non-existent. Glibly you write of interest rates as being ½ and 1 per cent. So utterly contrary are those statements to the facts that I can no longer permit them to go unchallenged. It is time that your readers were informed of the truth; they must cease to be regaled with your terminological inexactitudes.

The true fact is that it is almost impossible to borrow money and that, if one should be so fortunate as to suceed, one will have to pay the rate of interest you quote for every half hour instead of annually. Only yesterday, I approached my banker, a gentleman arrayed in wide, baggy, once-white trousers; a red, gold-embroidered velvet waistcoat, covered with grease stains, and, bearing, as his insignia of office, a mighty staff about eight feet long. I asked for a loan, a mere trifle of a hundred rupees. After he had put me through a regular inquisition as to where I was employed, who my father and my forefathers were, whether I was married or single, why I wanted the money and heaven only knows what else, I thought it was time I put one simple question to him.

"What" I enquired, "would be your rate of interest, supposing you agree to my request?"

"Two annas per rupee", was the reply.

Well, thought I, that's not so very bad. Rather more that the half per cent. which *Indian Finance* gibbers about, but it only works out at twelve and a half.

"Per month," added Shylock.

Ye gods! And that raving lunatic who calls himself the editor of a financial paper talks of a half per cent. One hundred and fifty per cent. is what I'm quoted, and that's a page from life, not one written by a man who probably never moves out of his own office. Not that I blame you for sticking to your chair. You'd probably be murdered by people like myself if you left it.

However, there's perhaps not much good in my working myself up into a white heat over the question of the rate of interest. For, after my banker had paid a visit to the one room in which I reside and asked to see my furniture; after I had shewn it to him (a really very fine camp bed), and after he had examined my wardrobe, consisting of a pair of trousers hanging on a nail on the wall, he refused point blank to proceed with the negotiations.

So let us hear no more of money being unlendable and of rates of interest that are only one hundred and forty nine and a half per cent. wide of the mark.

Yours etc.,

STONE BROKE.

The Editor, *Indian Finance.*

SIR,

Soaring Imports of Foreign yarn in May tell their own tale in no unmistakable terms. They consist of:

	(In thousands of lbs.)		
(1) Grey Singles yarns	2,800	(2,300	31-40 counts)
(2) ,, twofold ,, ...	362	...	...
(3) Bleached ,, ...	291	...	...
(4) Coloured ,, ...	129	(53	31-40 counts)
(5) Mercerized ,, ...	534	(534	...)
Total ...	4,116	(2,887	...)

Of the total 41 lakhs lbs, of yarn imported, nearly 29 lakhs lbs. are finer counts of 31 to 40, which cannot be produced from Indian cotton, as grown at present.

The figures also bring home the fact that there is a distinct demand in India for finer goods, and this is only natural in view of its warm climate.

This demand for finer goods is there as an established fact, and can only be met in one of two ways, *viz.*,

(1) by Indian Mills spinning finer counts by importing foreign long-stapled cotton, suitable for their requirements.

or

(2) in the alternative by importing foreign yarns or piece-goods.

No country in the world taxes or seeks to prevent free imports of raw products required for its Industry, but by one of the rare combinations of executive fiat gaining support through misguided patriotism, the Indian Government succeeded in levying a duty of ½ anna per lb. (=Rs. 25 per candy=nearly 10% of present cost), in the supposed interests of Indian growers.

The inevitable result of the Duty is reflected in the diversion from the imports of foreign raw cotton to those of foreign yarn. It is hardly fair to blame the Indian Mill Industry for this.

Cotton is, after all, an international product, and while our chief competitors, Japan and Lancashire, are free to buy their supplies in the world's market from cheapest sources, it is hardly fair to chain down our Mills to use coarser Indian cotton exclusively, and then taunt them for their inefficiency.

The secret of success of the Japanese Mill Industry lies in their skillful mixing of Indian and American cotton, the former reducing their cost and the latter yielding them better production and producing cloth altogether superior, in texture and finish, to cloth made from Indian cotton exclusively.

In view of the above facts, I hope the sponsors of the proposed resolution in the next sitting of the Legislative Assembly will reconsider their position and not press for a further enhancement of Duty on the imports of foreign cotton, bearing well in mind that the foreign raw cotton, that is imported, is very much superior to, and cannot be displaced by, any Indian cotton, as grown at present. The prevention of such cotton from coming in can only injure the Indian Mill Industry without benefitting the cotton grower in the least, and pave the way for the free inflow of foreign yarns or cloth.

Yours etc.,

VARJIVANDAS MOTILAL.

THE STATE-AIDED BANK OF TRAVANCORE, LTD.

Head Office:

Alleppey

Branches:

Trivandrum, Changanacherry, Cochin, Quilon, Kottayam, Kayenkulam & Ernakulam

(Under the patronage of the Government of H. H. The Maharaja of Travancore).

Chairman:

Mr. K. C. PANDALAI, B. Sc., (Econ.)

Fixed Deposits are now received at the following rates:—

6 Months	... 4 %	per annum
1 year	... 4½ %	,,
2 Years and more	5 %	,,

The interest is payable half-yearly. The Bank has made arrangements at Madras, Bombay, Calcutta and Bangalore for receiving and paying the Deposits AT PAR.

(From Our Correspondent).

Simla, August 1.

Simla does'nt know what to think of Railway Board and Reserve Bank Proposals: Who is to legislate for these bodies: The British Parliament or the Indian Legislature?: Mahatmaji's arrest—a prearranged affair: Air Bombing on a tiny village at the bidding of Nadir Shah: who is to do the bill?: Will the British Exchquer pay?:

Simla is altogether blank with regard to the Railway Board and Reserve Bank proposals, which are reported to have been agreed to in London. No information has been received here, and cables from London give very scanty information. However, two points seem to have been definitely settled ; firstly, that the European propaganda that the Railway Board shall be nominated by the Governor-General has not succeeded, and that the appointing authority will be partly the Federal Government and partly the Governor-General.

* * *

As regards communal basis of the Board Membership, the opinion held here is that the settlement, arrived at between the Indian Delegates, is at the expense of the Britishers, and will not therefore be accepted. The other details, that have reached over the cables, have been approved here, but no light is thrown on the most important question as to who would legislate for this statutory body. Will it be the British Parliament, or will it be the Indian Legislature?

* * *

As for Reserve Bank, information available here hardly takes us beyond what is reported in the Press regarding the Bank being a Shareholders' Bank. But the point of real importance is what would be the relation of this Bank to the Imperial Bank, and unless this is known the scheme cannot be judged as being in the interest of India or of England.

* * *

Simla, for the moment, seems busy regarding Mahatma Gandhi. The Mahatma's arrest was decided upon a month ago ; it was also planned that he would be arrested under the Ordinance Act and tried ; and, if convicted, treated as an ordinary prisoner. Government think they have done the right thing in arresting him, as their calculations that he had lost influence were falsified, and they found that, day by day, Mr. Gandhi was regaining his authority and giving the country a new enthusiasm for his work. This they could not stand any longer, and they were only waiting for the termination of the period of suspension of the Civil Disobedience Movement with a view to rearrest him. Hardly had the clock struck the first hour of the 1st of August, he was arrested. Could there be a greater demonstration of calculated action and determined authority?

* * *

A small village with four mud towers, containing a population of over seventy, is the target of a carefully planned aerial attack, since this morning, with high explosive bombs, in the small stretch of territory in Gandab valley close to the Afghan Border. The object of the attack is said to be the preservation of Indo-Afghan relations at the bidding of King Nadir Shah, who had apprehended attack from the Mohmand tribesmen who have been holding warlike Jirghas. These Jirghas are said to have been the result of the activities of three persons, whom the tribal hospitality of the Bajauris would persist in not surrendering, however much the British Government might regard their suspected presence in Kotkai village as being a menace to international agreement.

According to one calculation, thirty lakhs were spent two years ago, when the Khajauris were brought to book after their bare-faced march on Peshawar, early in the summer of 1930. This year, it is not known how much of taxpayers' money is proposed to be spent on the Bajauris for their alleged harbouring of three persons, wanted by the British Government. The Army Department is looking after this secret.

* * *

Only a few days ago in the House of Commons, a pointed reference was made to the attack on Bajauris, and an appeal was addressed to Sir Samuel Hoare to see that there was no bombing on the offending tribesmen. But, the military authorities have the bombing operation first in hand. As for the land army, two Brigades are on their way to Gandab Valley, but their progress is restricted by the rugged nature of the country, which is roadless.

* * *

One noteworthy feature of the movement of troops on the land is that the Regiments are all Indian, and the British Regiments are kept in reserve to be used only if, and when, absolutely necessary, and provided the weather conditions then permit. No regular military attack except from air is contemplated for sometime. But the question is who is to foot the bill? To what extent the British Exchequer will be asked to share in the plan is a question, which is agitating the members of the Assembly who are here for the Public Accounts Committee and who will set out with interpellations.

OVERSEAS' NEWS:

By Air Mail

GREAT BRITAIN

THE EXCHANGES AND THE POLICY BEHIND THEM.

The world Economic Conference has preferred a stalemate to a checkmate. The Sterling Committee decided on Friday July 14, to adjourn the conference and the committees which were still functioning were instructed to wind up their proceedings and embody them in reports with as little delay as possible. And within another week, the Conference will have adjourned for the summer recess leaving the question of its reconvention entirely in the hands of the Steering Committee. So far none of the committees has any concrete results to present to the plenary session. Even the inclusion of the Danubian countries in the wheat agreement is contingent on the European importing states agreeing to co-operate with the countries represented in the Conference through a relaxation of their quota systems. The Sugar Conference is even less of a success. And the other commodities have been left over for an indefinite future date.

Conversion of Dollar Bonds.

The offer of the British Government in respect of the conversion of the 5½ per cent. dollar bonds into 2½ per cent. sterling bonds repayable in February 1937, is the most notable event during the week. It will be remembered that the 5½ per cent. Dollar Bonds were raised on the New York market during the War and that the principal and interest upon it was payable in gold dollars or in sterling at the fixed rate of 4.86½ dollars. The dollar has depreciated below its gold value since the last interest payment; and as the American Government have authorised a repudiation of the gold clause in all obligations payable in the United States, the British Government have the right of paying in paper dollars as an alternative to payment in sterling at 4.86½ dollars. The rise of sterling to the old parity with the dollar has deprived the holders of these bonds of all the benefits of the premium of gold on sterling; and the value of the security fluctuates with the New York exchange except when the dollar is below 468½. The present invitation is for an exchange of the old bonds for new 2½ per cent. sterling bonds at the rate of 260 pounds sterling for every 1,000 dollars bond now held. There is, obviously, a loss in the rate of interest but there is a gain also in having a definite sterling value on a basis corresponding to an exchange of 3.85 dollars to the pound. Other advantages depend upon the view one takes of the course of the sterling dollar exchange in the future. If sterling rises above the level of 4.86 then those who avail of the conversion clearly stand to gain by this transaction. At the level of 3.85 the loss will be represented only by the reduction of the interest from 5 to 2½ per cent. And at 4.15 the advantage and disadvantage of conversion just balance. As the greater part of the dollar bonds have been already repatriated, no question of financial integrity towards foreign investors is involved in the action of the British Government. But the following comments of the *Economist* on this question represent a balanced judgment of the issues involved :

> The fact that this offer makes a present to holders of these bonds equivalent to nearly a fifth of the value of their holdings on Wednesday night—offset, however, by a reduction of interest—does not disguise the unpalatable truth that the British Government is departing from the clear intent of its bond and pleading in excuse the legislation of another country. If this is the considered attitude of the Government, the outlook for the reconstruction of an international financial order based upon the sanctity of contract is, indeed, gloomy. Leaving this question aside, the form of the offer appears not unreasonable. Both the Treasury, as debtor, and British holders of these bonds, as creditors, have hitherto, in effect, been speculating on the future of the exchange rate, and both will presumably be benefitted by closing the speculation out.

The Future of the Dollar.

A variety of factors have tended to revive interest in the exchange policy of the monetary authorities in Britain. There has, in the first place, been at least in the opening days of the week a degree of steadiness in the dollar sterling exchange which raised the question whether the steadiness did not indicate a feeling on the part of the American authorities that the required amount of depreciation of the dollar had been achieved and that the time had come when stabilisation should be seriously considered. It is widely believed that though the Inflation Amendment provided for the reduction of the gold content of the dollar to 50 cents., prominent members of Mr. Roosevelt's Brain Trust have long been prepared to be content with a depreciation of only 30 per cent. When later in the week, further depreciation was noticeable, it was believed that the steadiness of the early days signified an anxiety on the part of the Administration to feel their ground in regard to the relation between the exchange value of the dollar and the level of commodity and stock prices. That, even on those days, when dollar was comparatively stable, prices more than maintained the grain and stock exchange must be deemed encouraging for tthe American Government who must, by now, be thinking of the road back to a stable dollar. It may be supposed that only when the dollar depreciates to the limits specified by the Inflation Amendment will the anti-inflationist forces be able to mobilise sufficient strength to demand and secure a stable dollar. For the present, the steadiness of the dollar in the earlier part must be regarded as at best an experimental measure on the part of the Administration lacking in appreciable or permanent significance for the exchange market. If, as the latter part of the week showed, there is yet much depreciatiton for the dollar to undergo, the British authorities would have to decide whether they would allow sterling to follow the dollar and, if so, at what point the depreciation of sterling is to begin. Naturally, there is considerable difference of opinion as to the rate at which the British authorities would give up the game and allow sterling to depreciate in correspondence with the dollar. Some put the figure at 5 dollars but there can be no doubt that 6 dollars would be the limit of the Government's patience.

What about the Franc Rate.

If, as is not unlikely at the moment, the dollar shows signs of reaching that level, the question would arise as to the relations between sterling and the franc. Here, too, a fall of one point in the sterling franc quotation raised the doubt whether the Government are not already wavering in their mind about the maintenance of the stability of the London-Paris exchange. Though it is understandable that market circles should feel perturbed about the fall of one point, it is unduly panicky to regard that fall as betokening an imminent chaos in the exchange between Paris and London. It must be remembered that at the present time, the delegations of the Commonwealth nations to the World Economic Conference have been considering the possibility of arriving at some measure of agreement regarding the evolution of a common Empire monetary and exchange policy. It is quite conceivable that the Government deem it necessary to reassure the Empire governments of their independence of all commitments to foreign countries in respect of the currency and exchange policy by allowing sterling to fall in relation to the franc. For the stability of the sterling-franc exchange over a

Air Mail Week.

considerable period of time may raise the fear in the minds of the Commonwealth nations that, possibly, as a result of the negotiations, that were carried on behind the scenes of the World Economic Conference, the British Government had, without the knowledge of other countries, entered into an understanding with the French Government that the sterling franc rate would be maintained at the level of 86.

Impact of Empire Agreement.

There has, thus, been nothing in the week to create the fear that the Government have decided to abandon the sterling franc rate to natural forces. But it would still remain to attempt to foresee the impact on British exchange policy of any understanding between the Empire nations as to the common imperial monetary policy. Obviously, the Empire has nations which are financially strong and nations which are financially weak. In the interests of the latter, and, it must be said, in the interests of Britain, too, faced with an unlimited depreciation of the dollar, it would be necessary to allow a certain degree of inflation in Britain and a certain degree of depreciation in the exchange value of the pound. When the agreement between the Empire nations necessitate such a course, it is certain that the British Government would allow the sterling franc rate to drop from the level at which it has been virtually stabilised during the last two three months. Thus, Empire and inter-national factors alike are leaving the exchange position of the not very immediate future as hazy as it has ever been.

UNITED STATES OF AMERICA

THE SLUMP AND THE "NIRA."

The week has been a critical period in the recovery. At the beginning, the markets behaved in the same fashion as before rising with further slump in the dollar and reacting but temporarily to every attempt at profit taking. On Tuesday, the first signs of a break in share prices were visible. In these developments, the wet stocks led the way. There is, at present, no doubt that the States will give increasing support to the repeal of the 18th Amendment to the enlargement of the scope for the development of the distilling and brewing industries. People are always aware that the productive capacity of companies, already in existence, is but a small proportion of the total consumption of alcoholic beverages in the country, once the 18th Amendment has been swept clean. But the profit-earning capacity of the wet companies cannot be estimated solely on the basis of the scope for expansion. It was widely believed that the increased profits, indicated by the abolition of prohibition, had been already discounted and that, even at the level then existing, prices were much above their economic levels. This is in a sense true of all the share and commodity prices and it is natural that when the wet shares showed a sharp break of 8 to 20 points, the infection spread to all corners and drastic declines were registered in all industrial shares. On Wednesday commodities also joined the rout. Brokers, far from being alarmed at these developments, were rather in a mood to encourage them. For, at the end of the week, many important broker firms were found to be of the opinion that at the end their books were in a more satisfafctory position than before. European selling had also much to do with the developments of the week, and by curious coincidence, the dollar had also firmed up just at this stage with the result that there was hardly anything to prevent the decline. Operations put through with a view to cut the loss quick were so immense that the turnover on Thursday is almost a record in the whole history of the exchanges. The expectation that the stock exchange committees might close the market were falsified by the report that was available late in the day that the members had left their turns. The position in the grain markets was so serious that the Chicago Board of Trade had to proclaim that grain fluctuations shall not exceed 8 cents either way until further notice. Similar action may be required in the other commodity markets where movements have been equally violent, cotton dropping 80 points on July 20th, cocoa and coffee more than 50 points and export copper more than 17½ points.

Gambling on Markets.

Foreigners are apt to regard the break in share and commodity prices as a crushing reverse for the Administration in its efforts to engineer a revival of trade and industry, but from all signs the Administration seem to be little perturbed by the fall in prices. In fact, the President is reported to be of the opinion that these developments were, if anything, overdue. The Government take the view that they have no responsibility in the matter of saving individuals from their own folly in gambling on the stock and commodity markets. The President is reported to have said that recovery is not dependent on the making of paper profits. All that the Administration is interested in, to-day, is the increase in purchasing power through increase in wages and expansion of employment. Here, however, there is reason for some nervousness, for it is now recognised on all hands and particularly by General Hugh Thompson, the Industrial Administrator, that unless wages are immediately forced up and employment increased, the forward movement of business will collapse, yielding place to a new and more terrible slump than we are attempting to leave behind, and that within a couple of months. The NIRA (National Industry Recovery Administration) has, therefore, to redouble its efforts.

Voluntary Codes of fair Competition.

If the pace of production and general consumption is fast, the progress of the formulation of codes of fair competition on a voluntary basis would have sufficed to ensure the much-needed balance in the national economy. But at the rate at which production is being increased, it would seem that the Administration would be taking great risks to leave the adoption of such codes to the sweet will of private employers. Early in the week, it was learned that the steel and oil industries, two of the greatest in the country, had filed their codes with the Administration. These trades have come into line with the rayon, textile, coal, building and electrical industries in submitting plans for voluntary control of production and working conditions. The provisions of the oil code are supposed to be very drastic, but they are not yet available. It may be interesting to point out by the way that the Texas oil interests intend to resist the President's ban on the inter-state transfportation of hot oil. The steel code has provided for a 40 hour week and a maximum of 15 per cent. increase in wages for two skilled employees. Child labour under 16 years of age is to be abolished. Unskilled labour varies from district to district, from 25 cents per hour in the South to 40 cents per hour in the Pittsburg and Ohio area. Production is not restricted, but new blast furnaces, open hearth or Bessemer producing facilities are forbidden during the currency of the code. As mentioned already, all this progress, though no doubt notable in itself, would still be insufficient to secure the necessary equilibrium of productin and consumption.

Blanket Code.

The President has, therefore, decided after consultation with General Hugh Thompson to formulate

Air Mail Week.

what is called a blanket code which will be applied to every industry pending the adoption of a voluntary code. The blanket code would enforce a 35 to 40 hour week for a minimum weekly wage of 14 dollars. Much scepticism prevails regarding the practicability of a blanket code to apply for all industries. It is greatest as utopian, and is lacking in recognition of the differences in conditions between industry and industry, and employer and employer. But the Administration will not be dissuaded through their efforts to put into force the code already outlined. The Administration is not unprepared for the contingency of industries questioning the legal competence of the Administration to enforce the blanket code. It is universal that President Roosevelt has numerous weapons in reserve for bringing pressure to bear upon recalcitrant parties and forcing them to expedite a voluntary code, where the enforcement of the blanket code might be found difficult for some reason or other.

Institution of Public Works.

It may be expected that with the application of the blanket code, the lag between production and consumption will have been considerably reduced. But President Roosevelt's sledge-hammer is the institution of public works. It was announced that the President would be prepared to utilise, if necessary, the whole of the 3,300 million dollars appropriated by Congress for public works in order to restore employment and raise wages. Allotments from the fund for various federal and other construction projects are to be made at regular intervals, and this, it is hoped, will further in spreading purchasing power and reducing unemployment. A sample of the schemes to be adopted with a view to stimulate industrial recovery is afforded by the current issue of the *Index*, which is the official publication of the New York Trust Company. The President has launched a gigantic scheme for the development of an area 640 sq. miles for 7 southern states, Tenesse, Georgia, Alabama, North Carolina, South Carolina, Missisippi and Kentucky. Under this scheme, a public corporation, entitled Tenessy Valley Authority, has been set up with authority to construct and operate huge hydro-electric works, generate, transmit and sell electricity, manufacture nitrates, create inland waterways, reclaim land and undertake flood control, where floods in the past had taken a heavy toll in wealth and life. The scheme is not an altogether new one, in as much as the Administration had a nucleus of it in the muscle shoals propect, undertaken during the way of private nitrates for munitions. It was later allowed to languish owing to the hostility of powerful vested interests. As in so many other matters, here also President Roosevelt swept the opposition and has now succeeded in giving to the old scheme the widest scope possible. It is obvious that land reclaimed will be a considerable relief to the farming community in that part of the country. But the chief argument for the whole scheme is the possiblity of providing the farmer with least expensive fertilisers. Formerly, America was importing a million ton of natural nitrate annually from Chile. With the development of synthetic manufacture, America has been relieved

of her dependence on Chile and though she continues still to import a small quantity of nitrate she is still able to capture some of the foreign markets. In a peak year such as 1929, the country's consumption of nitrate was 408,000 tons and the present potential production is placed at 517,000 tons.

AUSTRALIA.

DEVELOPMENT OF NORTHERN AUSTRALIA.

Vast uninhabited tracts of Northern Australia have been a fruitful source of incisive criticism of the "White Australia" policy, notably by India and China. The Government had to play a dog-in-the-manger policy, so long as it suited it. But, it is to be presumed that the stampede of Japan in Manchuria and her penetration beyond the Great Wall of China, so soon after the high-handed annexation of Chosen ; and the possible entry into inner Mongolia, have frightened the Pacific countries, even as Nazi Germany has alarmed the rest of Continental Europe. No wonder, therefore, that the Australian Government should regard the development of the Northern Territory as an "imperative responsibility". This huge enterprise has no bearing upon the financial situation, except that it is an unusual means to relieve economic depression. The Government has announced full protection of the natives, and proposes to encourage and assist two chartered companies, in order to ensure speedy development and profitable investment. But their plans will be subject to the approval of the Australian Government. The Northern Territory will be divided into two zones, eastern and western with one company to operate in each. The eastern zone includes the Barkly Tablelands and will have as its port the mouth of the McArthur River. The other zone covers the Victoria River area. The commonwealth government will exert its influence with the Government of Western Australia to cede Wyndham for its port and a part of North-Western Australia, to afford direct approach to the port.

The Government will grant land tenures ; will offer favourable conditions to assist the companies in the construction of railways, tramways, wharves and other necessary works ; will introduce a special tariff on imported goods for Northern Australia, free of duty or at low rates of duty, direct or through the States; and will also ask the Parliament for exemption from land and income tax for a definite term of years.

Sir George Pearce, Minister for Defence, has elaborated plans, so as to give first consideration to pastoral industries, in the development of Northern Australia. Conditions, suitable to the profitable raising of sheep, cattle and pigs, will be created. Agricultural development will follow later. But, it is not clear how the Government or the two chartered companies propose to people uninhabited territory, in such heavy numbers as to ensure defence against foreign agression, if not now, at least in the near future. The climate of Northern Australia is not such as to invite White colonisation. Until the two chartered companies start their operations, it is idle to speculate upon the possibilities of admission of Aryan races like the Indians and Iranians or of the influx of coloured labour under the already discredited system of indenture, or its modification.

Economic Endurance.

Owing to uncertain seasonal prospects, trade declined during June. But compared with this period of last year, a definite improvement in many sections of secondary industry and distribution, is noticeable. July rains over large sections of sheep area in Queensland and the wheat districts of all States have revived hopes of good results in the cultivation of rural products. Many other factors contribute to sustain public confidence. Wool, wheat and metals have been obtaining higher prices. Government deficits for the past year have been shrinking ; and lower taxation is being looked for. The Commonwealth Loan was a success. The maintenance of a large volume of exports, lower interest rates and stable London exchange have strengthened public confidence in the economic recovery of Australia. The building revival is a sign of returning prosperity. Among the relative trade unionists, unemployment has fallen, during the past twelve months, from 36 to 26 per cent. However sectional this improvement may be, general public confidence and the development schemes for Norhern Australia have added fresh zest for progress, all along the line of economic life.

Representatives of oil companies and the German Dye Trust have joined a group, with a view to invest £5,000,000 in a project for the extraction of oil from New South Wales coal. The yield is estimated to be 180 gallons of crude oil per ton of coal. It is also hoped that petrol from this coal can be sold at one shilling a gallon.

Australian Currency.

New currency notes are being introduced. The change represents the deletion of the promise to pay in gold. The new notes clearly state that they are legal tender for the amount mentioned on its face in the Commonwealth and the territories of the Commonwealth. As though to offset this unavoidable sliding down necessitated by the sterling standard, now in adoption, the Commonwealth coat-

of-arms watermark on the notes is replaced by the head of the Prince of Wales. The features of His Royal Highness are seen facing those of the King, when the notes are held up to light. It is to be hoped that the popularity of the Prince of Wales may impart itself to the changed currency notes. The new ten shilling notes are ready for issue, while the new pound note will probably be issued during August.

JAPAN

RAPID INDUSTRIAL RECOVERY.

Japan's prosperity looks like being founded on the bedrock of silk industry. Last year, Japan supplied to the world about 33,900 metric tons of silk, out of about 41,862 metric tons. Even in the matter of rayon fabrics and yarns, Japanese competition has grown, and is growing, in various markets. In fact, silk prices are the index of Japan's economic prosperity. The advance in raw silk prices to 920 yen per bale against 631 yen in March, reflected itself in the strength of the cocoon market. Cocoons sell at about 6.00 yen per Kamma, as against the average of 2.53 yen a year ago and 3.10 yen two years ago. The total value of cocoon crops of this spring season is estimated to exceed 265 million yen, as against 111.9 million for the same season last year, and 154.8 million yen for that of 1931. Even the Farm Relief Scheme, by which the Government gave relief to agriculture and which was, to some extent, responsible for the huge budgetary deficit of 1932, could not achieve results in the agricultural domain, as the sharp upward trend of cocoon prices did.

Out of 56 articles, 28 advanced in prices, however slightly ; 14 remained unchanged ; and another 14 declined. Foodstuffs and textiles came under the first category ; and fuel and building materials in the last. The index number of wholesale and retail prices fluctuated only within a narrow margin.

Increase of dividends or resumption marked the affairs of major companies. The Mitsubashi Mining Company and the Japan Oil Company doubled or trebled their profits, paying naturally, higher dividends. The Katakura Silk-reeling Company did very well indeed. Among the companies, which earned very large profits, but passed their dividends, are the Nippon Yusen Kaisha, the largest shipping company and the Tokyo Electric Light Company. The net profit of the Government Steel Works for the business year ended March 31, was 21.2 million yen, as against a deficit of 2.5 million yen for the previous year. The expansion in export trade was continuous and was accounted for by cotton piecegoods, raw silk and artificial silk tissues. The rest of the list accounts for half of the expansion. Imports of iron and steel, raw cotton, raw wool, machinery and oils increased. But the imports of sulphate of ammonia, oilcake and rice somewhat declined. The excess of imports during the first six months of the year was 186 million yen, against 265 million yen. An agreement in regard to sugar production for the season 1933-34 has been reached, the total, fixed at being 13,124,000 piculo.

The rise in cocoon prices, the expansion in export trade and improvements in company results have accounted for the upward progress of the stock market. The official rate of the Tokyo clearing banks for silk-reelers' bills has been reduced from 5½ per cent. for last year to 5.1 per cent. Notes in circulation were contracted to about 1,000 million yen. The healthy tone of the markets was reputed to be, not a little, due to the cessation of hostilities in North China. But, any time, there may be a recrudescence of trouble in China, over the question of the neutral zone within the great wall, over the buying up of Russian rights in the Chinese Eastern Railway, or over the shotting affair in Kamatchatka. However much the economic life of Japan may pull up national well-being, imperialistic ambitions are bound to prove a drag on her fortunes.

ANXIETY OF COTTON MILLS.

An evidence in point is the continued depression in cotton mill shares, caused by the Chinese boycott and accentuated by the Indian Tariff increases. The Cotton trade was, naturally, shocked. So long as the Japanese product can press out, in competition, any rival in any market with its rock-bottom prices, a prohibitive tariff, and a preferential one at that, cannot but be an annoyance. The Indian Tariff increases have so much infuriated cotton spinners that they agreed to resort to the boycott of Indian Cotton. The boycott of Indian cotton has been effective in that it aggravated the fears of the Indian cultivator. Knowing that Indian masses are helpless against their British rulers, the injury to the Indian farmer can, by no means, be transferred to the British Government which does the entire wire-pulling. The reprisal policy of the Japanese cotton spinners is ill-advised, nay, suicidal, in that it would increase the cost of manufactured goods. Indian masses will only be able to comprehend the harm done by Japan, as the absence of Japanese buying agents in the cotton districts will be sadly missed by them. In this instance, it is well to remember that the Indian masses have not yet sufficiently developed their political sense, so as to understand the why, and the wherefore, of the Japanese reprisal. It is but proper that Japanese spinners ought to recognise that the interest of Indians is only to safeguard the national cotton textile industry and nothing beyond.

In any case, the Japanese boycott of Indian cotton is open to objection. Japan was very vociferous in declaiming against the Chinese boycott of Japanese goods. Hence, the boycott of cotton is bound to be misconstrued in India. But, Indians ought to remember that Japan protested against the Chinese boycott, even unto the application of force in defence of her (Japan's) rights, as it constituted an infringement of treaty rights in China. India is not free to make any such specious plea, as the trade agreement with Japan was repudiated, when the invidious tariff increases were enacted against Japanese cotton manufactures. But, so far as Japan is concerned, patience will be the better part of valour. As for India, the coming visit of Japanese businessmen to India in September may evolve some formula, by which Japanese favour for Indian cotton can be resuscitated, in as large a measure as possible.

ARGENTINA

A TRYING YEAR.

The past year was a period of grim struggle against financial and economic difficulties. Not being a first-rate manufacturing country, it was put to a severe test when the prices of its products remained low, and its best markets were partly closed by artificial restrictions. The Argentines are carefree, easy-going, luxurious and improvident, as a result of the exceptionally fertile soil that the stock-breeders or the agriculturists are endowed with. They are, perhaps, the cheapest producers, in the world, of a variety of essential foodstuffs. The value of land leapt steadily during two generations. To augment his income, the *estanciero* glided into

Air Mail Week

borrowing heavily against the *estancias*. Such of them, as changed hands at high prices before the crisis, are now ready for transfer at much lower figures. Similarly, the tenant-farmer, by whom 90 per cent. of the cereals are produced, is accustomed to receive advances from the local storekeeper, known as the *acopiador*, who, in turn, obtains credit from the broker or shipper. If the primary producer fails in his payment, the repercussion is felt even up to the Banks.

As against this picture, many producers have brought down their costs, in order to compete with current low prices. This class of persons is in a position similar to those other persons who have inherited land and have, therefore, no capital charges to pay. These two classes await the upward turn of the market, which alone can enable them to return to their former mode of luxurious living.

Recovery Prospects.

The value of the annual national production is estimated, at present, to be about £400 millions, a third of which representing that of manufactured goods, and those of agricultural products and live-stock dividing the remaining two-thirds. But, in high-class articles, a large range of requirements can only be obtained from foreign countries. The weak point in the national economy is the absence of local coal and iron, which has prevented the growth of engineering industry on an extensive scale. The low-class manufactures are consumed in the country. Goods from abroad can thus be purchased, only by exporting the surplus grain and meat.

The Minister of Finance stated that the internal, external and floating debts of Argentina, on January 1st, 1933, amounted to 3,500,000,000 paper pesos. Since 1931, the decrease was 155,000,000 pesos. During the first half of this year, Argentina exported, 7,356,000 tons, valued at 255,420,000 gold pesos, as against 9,668,000 tons, valued at 333,444,000 gold pesos for the corresponding period of last year.

The Anglo-Argentine Trade Agreement negotiated by Dr. Roca, Argentine Vice-President and Mr. Walter Runciman of the British Board of Trade, was passed by the Chamber on July 19, by 61 votes to 41. The agreement deals mainly with the export of meat to Great Britain and arrangements for the liquidation of £10,000,000 British capital, "frozen" in Argentina owing to exchange restrictions.

Resignation of Financial Minister.

Senor Hueyo, the Minister of Finance, has resigned, and even after a friendly interview with President Justo, who has no fundamental divergence of opinion, declined to withdraw his resignation. The portfolio for the Finance Minister was entrusted to Senor Irendo, the Minister of Justice on July 19. The causes of the Cabinet crisis are many. Inflationists are busy canvassing for the suspension of the interest on the public debt and the continuation of the amortisation only. Another cause was tariff reductions, necessitated by the Trade Agreement with Britain. A third cause was the submission of a balanced Budget in conformity with Sir Otto Niemeyer's recommendations, while several Ministers were unwilling to incur the enmity of the Civil Service.

NETHERLANDS

GOOD-BYE TO FREE TRADE.

Free Trade is on the verge of being dislodged from its last trench. When Britain banished it from her shores, it was sure of its traditional home in Holland. German recalcitrance in according just treatment to Dutch holders of German bonds has disturbed Dutch confidence in the principles of Free trade. In the matter of transferred interest and redemption payments, Germany has told her external creditors to accept payment in Reichsmarks. But the creditors are naturally chary to shoulder the risk of exchange. In view of this attitude, the Reichsmark did attempt to satisfy the Dutch creditors, among others, by meeting their objections to some extent. But, the creditors are adamant in protesting against the principle of the German law of June, 1933, which has authorised the payment of German's foreign obligations in Reichsmarks. The case of the Dutch creditors is unique, in that Holland has not, so far, set up tariff barriers, as the countries of other creditors of Germany have done. Naturally, the Dutch resentment is all the keener. The more acute the disappointment, the more pronounced the reaction. By way of reprisal, the Government has provided itself with the authority to restrict, or prohibit, imports and to increase tariffs.

The Government further intends to establish an export monopoly for the purpose of centralising exports. In the nature of things, an import monopoly and the centralisation of traffic in foreign currency must follow suit.

Even in purely internal affairs, legislation is being undertaken to tide over the difficult situation. The Agricultural Crisis Act is to be amended, with a view to include new classes of produce. This extension will necessitate the imposition of new levies on abnormal importation from abroad. It will also be stipulated that home materials should form a certain percentage in the making of products, such as margarine.

Gold Standard Firm.

Though the Netherlands Bank had to deplete its gold holdings by 43 million guilders and 23 millions in the two weeks ended June 26th and July 3rd respectively, and the gold losses, since the beginning of January 1933, amounted to 265 million guilders or thereabouts, confidence in the guilder was not rudely shaken. This is at it should be. The action of the President of the Bank in raising the official discount rate from 2½ per cent. on May 12th to 4½ per cent. and the firm attitude of Dr. Colijn, the Prime Minister, at the World Economic Conference, tended to confirm the view that Holland would maintain the gold standard. All the same, certain prominent persons were not slow in making efforts to involve Holland in inflationary tactics. This fact, happening in the wake of the outflow of gold, affected the money market. But the Government, by way of reply to a question in the Chamber, nipped the alarm in the bud. The Minister of Finance stated on July 15, that action against the inflationist busy-bodies was not necessary. He had sufficient confidence in the Netherlands Bank to defend against attacks on the gold standard. In this effort of the Netherlands Bank, the private Banks in Holland and the central banks in other gold standard countries have collaborated.

Foreign Trade.

Dutch foreign trade figures for the month of May declare an improvement over those of the previous month. Imports in May amounted to 1,952,000 tons with a value of 98.3 million guilders showing an increase of 100,000 tons with a value of 8.8 million guilders. Exports also rose, by 36,000 tons with a value of 6.75 millions, to 1,086,000 tons with a value of 61.15 millions. These figures mark only a tendency to trade recovery. The balance of imports in May was slightly in advance of that in April, the difference being 1.98 million guilders. But, if the figure for the first five months of 1933 is compared with that for the same period of 1932, the adverse balance is considerably less by 43.55 million guilders.

STATISTICAL INFORMATION

BOMBAY.

The following statement shows the value of imports and exports of the principal articles of foreign trade of the Bombay Presidency for three months from 1st April to 30th June, 1933, compared with the corresponding period of the preceding year:—

IMPORTS.

	Three Months from 1st April to 30th June		
	1932 Value Rs.	1933 Value Rs.	Increase or Decrease.
Merchandise ...	16,83,97,484	11,41,20,357	−5,42,77,077
Treasure, Gold ...	15,73,852	17,94,167	+2,20,913
,, Silver ...	38,22,059	3,24,411	−34,97,648
,, Currency Notes ...	2,14,130	99,020	−1,15,110
Total Imports ...	17,40,07,475	11,63,37,955	−5,76,69,520

EXPORTS.

Merchandise—			
Indian Produce ...	4,09,34,291	8,05,28,678	+3,95,94,387
Foreign ,, ...	40,15,071	46,95,017	+4,79,946

Total Imports and Exports ...	33,98,05,997	34,64,20,431	+66,14,434

The aggregate value of the foreign trade of Bombay—Imports and Exports—for the month of June, 1933, was Rs. 11.65 crores, showing an increase of Rs. 8.03 lakhs, or .7 per cent., over the figures for June, 1932, and of Rs. 2 crores, or nearly 21 per cent., over those for June, 1931. The increase of Rs. 8.03 lakhs is due to larger shipments of both Indian produce and foreign merchandise and gold. Imports of gold also increased but those of merchandise and silver recorded noticeable decreases.

Imports of merchandise amounted to Rs. 3.5 crores, showing a decrease of Rs. 1.64 crore, or nearly 32 per cent., as compared with the figures for June, 1932, and of Rs. 1.85 crore, or nearly 35 per cent., as compared with those for June, 1931. The decrease of Rs. 1.64 crore is chiefly attributable to smaller arrivals of most of the principal articles of import, the more important being raw cotton (−5,749 tons and −Rs. 50.08 lakhs), cotton piecegoods (−7¾ million yards and −Rs. 17.16 lakhs), alizarine and aniline dyes (−Rs. 17.09 lakhs), cotton twist and yarn (−over 1 million lb. and −Rs. 12.36 lakhs), metals and ores (−Rs. 11.8 lakhs), artificial silk piecegoods (−4 million yards and −Rs. 9.32 lakhs), paper and pasteboard (−Rs. 8.54 lakhs), silk, raw (−Rs. 7.13 lakhs), silk manufactures (−Rs. 6.74 lakhs), mineral oils (−over 1¼ million gallons and −Rs. 5.3 lakhs) and glass and glassware (−Rs. 4.58 lakhs). Imports of gold amounted to Rs. 8.33 lakhs as against Rs. 3.89 lakhs and Rs. 10.71 lakhs and those of silver to Rs. 59,453 only as against Rs. 12.79 lakhs and Rs. 28.87 lakhs in June, 1932 and 1931, respectively.

Exports of Indian produce were valued at Rs. 2.92 crores, showing an increase of Rs. 1.34 crore, or 85 per cent., over the figures for June, 1932, but a fall of Rs. 7.3 lakhs, or over 2 per cent., from those for June, 1931. The increase of Rs. 1.34 crore is almost entirely due to larger shipments of raw cotton (+18,959 tons and +Rs. 1.27 crore) and wool, raw (+nearly 1 million lb. and +Rs. 3.58 lakhs). Exports of gold amounted to Rs. 4.96 crores as against Rs. 4.54 crores and Rs. 64.03 lakhs and those of silver to Rs. 14,000 against Rs. 24,000 and Rs. 34,900, respectively in June, 1932 and 1931.

Re-exports of foreign merchandise advanced by Rs. 4.2 lakhs as compared with the figures for June, 1932, but receded by Rs. 7.19 lakhs as compared with those for June, 1931.

The trade statistics for the first three months of the current financial year 1933-34 show a fall of Rs. 5.77 crores, or 33 per cent., and of Rs. 4.75 crores, or 29 per cent., in imports, from the figures for the corresponding period of the years 1932-33 and 1931-32, respectively. Exports, however, show a rise of Rs. 6.43 crores, or nearly 39 per cent., and of Rs. 11.48 crores, or nearly cent. per cent., respectively, over the figures for the same period of 1932-33 and 1931-32. Imports of gold amounted to Rs. 17.94 lakhs as against Rs. 15.74 lakhs and Rs. 35.48 lakhs and those of silver to Rs. 3.24 lakhs against Rs. 38.22 lakhs and Rs. 72.48 lakhs, respectively. Imports of merchandise declined by Rs. 5.43 crores and Rs. 3.88 crores to Rs. 11.41 crores. The decline of Rs. 5.43 crores, or 32 per cent., as compared with the figures for the corresponding months of 1932-33 is shared by most of the principal articles of import, the more important being raw cotton (−42,293 tons and −Rs. 3.7 crores), mineral oils (−3½ million gallons and −Rs. 37.87 lakhs), alizarine and aniline dyes (−Rs. 34.94 lakhs), cotton twist and yarn (−over 2½ million lb. and −Rs. 26.45 lakhs), cotton piecegoods—grey and coloured (−over 10¼ million yards and −Rs. 22.64 lakhs), metals and ores (−Rs. 18.95 lakhs), artificial silk yarn (−1½ million lb. and −Rs. 16.21 lakhs), paper and pasteboard (−Rs. 15.85 lakhs), silk, raw (−Rs. 13.68 lakhs) and artificial silk piecegoods (−over 5¾ million yards and −Rs. 12.88 lakhs). Imports of motor cars, including motor wagons, cycles and parts thereof and precious stones and pearls, unset, on the other hand, improved by Rs. 15.98 lakhs and Rs. 7.65 lakhs, respectively. Arrivals of sugar also improved by 10,692 tons in quantity and by Rs. 8.58 lakhs in value.

Exports of gold amounted to Rs. 14.48 crores as against Rs. 12.06 crores and Rs. 64.03 lakhs and those of silver to Rs. 19,942 against Rs. 75,405 and Rs. 48,400, respectively, as compared with the figures for the corresponding period of the years 1932-33 and 1931-32. Exports of Indian produce were valued at Rs. 8.05 crores against Rs. 4.09 crores and Rs. 10.13 crores, respectively, showing an increase of Rs. 3.96 crores, or nearly 97 per cent., over the figures for the same period of 1932-33. This increase is accounted for mainly by larger shipments of raw cotton (+57,998 tons and +Rs. 3.65 crores), wool, raw (+nearly 2¾ million lb. and +Rs. 10 lakhs) and myrabolans (+Rs. 5.81 lakhs).

Re-exports of foreign merchandise amounted to Rs. 46.95 lakhs as against Rs. 42.15 lakhs and Rs. 74.77 lakhs, respectively.

SEA-BORNE TRADE OF KATHIAWAR PORTS

The following details are taken from the "Times of India:—

The aggregate value of all goods imported at Kathiawar ports during the five months, April to August, 1932, which is the latest period for which statistics are available, was Rs. 2,04,09,845 as compared with Rs. 72,98,355 during the corresponding period in the previous year, showing an increase of Rs. 1,31,11,490 or 176.40 per cent.

The notable increase was at Bhavnagar port where imports increased from Rs. 13,92,239 to Rs. 1,52,46,599. Porbander also reported an increase of Rs. 1,76,207 from Rs. 1,43,429 to Rs. 3,196,36. Imports in Nawanagar showed a decrease of Rs. 5,29,436 from Rs. 26,06,915 to Rs. 20,77,479; in Baroda a decrease of Rs. 2,07,829 from Rs. 21,47,987 to Rs. 19,40,158; in Morvi a decrease of Rs. 27,224 from Rs. 6,46,967 to Rs. 6,19,743; in Junagadh a decrease of Rs. 1,38,128 from 3,17,358 to Rs. 1,79,230 and in Jafferabad a decrease of Rs. 16,460 from Rs. 43,460 to Rs. 27,000.

RAW COTTON IMPORTS

The principal item which contributed to the increase was raw cotton, the imports of which increased during the period under review from Rs. 1,888 to Rs. 1,17,52,972 mostly through Bhavnagar port. The other commodities which were responsible for the increase were sugar from Rs. 18,87,660 to Rs. 24,36,539; steel from Rs. 2,23,986 to Rs. 2,23,986; cotton piecegoods from Rs. 45,722 to Rs. 2,70,357; yarns and textile fabrics from Rs. 80,694 to Rs. 4,21,814; dyeing and tanning materials from Rs. 72,421 to Rs. 1,98,601; liquors from Rs. 1,319 to Rs. 16,372; Portland cement from Rs. 2,050 to Rs. 31,361; steam-engine parts from Rs. 6,610 to Rs. 53,793; electrical control and switch gear from Rs. 7 to Rs. 25,111; machinery from Rs. 1,93,945 to Rs. 5,40,449. Imports of machinery from the United Kingdom totalled Rs. 4,38,771 as against Rs. 1,45,983. Imports of cotton spinning machinery were valued at Rs. 66,974 and those of cotton weaving machinery at Rs. 30,857 as against Rs. 9,379 and Rs. 2,437 respectively.

Imports from the United Kingdom of the cotton piecegoods were valued at Rs. 7,063 (grey), Rs. 41,473 (white), Rs. 45,666 (printed) and Rs. 63,054 (dyed) as compared with Rs. 1,101, Rs. 9,424, Rs. 292, and Rs. 5,370 respectively during the same period in the previous year. Imports from Japan were valued at Rs. 49,075 (grey), Rs. 20,655 (white) and Rs. 11,157 (printed) as against Rs. 20,339, Rs. 4,090 and Rs. 1,590 respectively.

CUSTOMS RECEIPTS.

The latest quarterly statement of revenue received from the Indian sea and land Customs (not including salt revenue) shows a grand total of Rs. 11,95,52,000, which may be compared with Rs. 12,91,26,000 received in the same quarter of last year and Rs. 10,83,02,000 collected in the corresponding quarter of 1931.

The following table shows the revenue in thousands of rupees received from the import duties on various commodities in the first quarter of each of the last three fiscal years:—

Imports.

	1931.	1932.	1933.
Plain grey cotton piecegoods (British)	306	546	358
Plain grey cotton piecegoods (non-British)	1,783	2,909	2,892
Other cotton piecegoods (British) ...	4,081	7,496	6,110
Other cotton piecegoods (non-British)	2,447	3,638	4,820
Raw cotton	Nil.	2,943	1,206
Cotton yarn and thread	786	1,501	1,310
Machinery	Nil.	3,073	3,111
Iron and steel liable to additional duties (British)	426	415	927
Iron and steel liable to additional duties (non-British)	845	511	681
Iron and steel liable to additional duties	1,965	3,030	426
Motor Spirit	1,162	522	415
Yarn and textile fabrics including short fents of cloth but excluding artificial silk yarn, cotton yarn and silk and artificial silk manufactures, if not liable to preferential rates of duty ...	3,022	2,421	1,293
Raw materials and articles mainly not manufactures other than metallic ores, if not liable to preferential rates of duty	1,584	2,337	955
Silk and artificial silk piecegoods and other manufactures of same ...	1,943	5,364	5,018

Exports.

	1931.	1932.	1933.
Raw Jute	2,641	2,077	3,305
Manufactured Jute	3,114	3,601	3,567

The following figures of tea exports taken from the Calcutta Customs daily entries and received periodically from Chittagong have been issued by the Indian Tea Association:—

Quantity of tea entered for export to United Kingdom for the first half of July, 1933.

Calcutta—Black 7,463,311 lb.; Green Nil.

Chittagong—Black 3,334,670 lb.; Green Nil.

Quantity entered during the corresponding period last year.

Calcutta—Black 9,456,175 lb.; Green Nil.

Chittagong—Black 3,686,525 lb.; Green Nil.

Total from 1st April, 1933, to 15th July, 1933.

Calcutta—Black 21,178,481 lb.; Green Nil.

Chittagong—Black 8,671,931 lb.; Green Nil. Total 29,850,412 lb.

Total from 1st April, 1932, to 15th July, 1932, 35,354,335 lb.

(*Continued from page 315.*)

from the hill sides. Experience of the last two monsoons has shown that such a course is highly necessary as a portion of the hill through which the water has to be diverted has been slipping and sliding slowly year after year. With the tunnel which will be driven right through the mountains, the water course will be entirely free from any such dangers and in a scheme of this nature, where the implications are of a far-reaching character, every precaution to ensure continuous supply has to be taken. These are the main reasons why the estimate figures show an increase over those stated in the last Budget Session. Further provision has now been made for Interest charges for the period of construction when the capital will be unremunerative. The whole estimated cost is distributed under the various sub-heads as follows:—

	(Lakhs).
Head works	Rs. 31.73
Transmission	,, 22.07
Distribution	,, 5.96
Supervision	,, 3.00
Contingencies	,, 2.50
Other miscellaneous charges including interest on capital outlay ...	,, 5.50
Total ...	Rs. 70.76

or roughly Rs. 70.80 lakhs.

With the assurance of a definite connected load which will bring in a consumption of 7 to 8 million units per annum from the very commencement, the financial aspect appears to be satisfactory as it might be possible to meet interest charges and working expenses from the early stages of operation. The Scheme has already been taken in hand for execution and the preliminary works in connection with the construction of staff quarters and road are already in progress. A special Engineer experienced in Tunnel Construction, who was until recently in the Punjab Government service in the Uhl River Project, has been appointed and he is organising the works in connection with the Tunnel Driving. Specifications for the various items of plant and machinery are under preparation and contracts will be placed after inviting tenders by January, 1934. A provision of Rs. 10 lakhs is, therefore, made in the next year's budget under the head Pallivasal Hydro Electric Scheme.

FINANCIAL POSITION.

A statement of Assests and Liabilities as at the close of 1108 and 1109 is given in the budget estimates. According to the final accounts of 1107, booked assets stood at Rs. 358.80 lakhs anl the liabilities at Rs. 235.96 lakhs. At the close of the current year, the assets are expected to amount to Rs. 381.60 lakhs and the liabilities to Rs. 267.90 lakhs. Surplus investments, which stood at Rs. 187.95 lakhs at the close of 1107, are expected to amount to Rs. 211.73 lakhs at the close of the current year. In the next year, it is expected that Rs. 29.97 lakhs may have to be drawn from surplus investments to meet the expenditure on Capital works; and the investment account is, therefore, expected to stand at Rs. 181.76 lakhs at the close of 1109. Assets and Liabilities at the end of the next year are expected to be Rs. 374.47 lakhs and Rs. 278.35 lakhs respectively. The Government Account which stood at Rs. 122.84 lakhs at the close of 1107 is expected to be reduced to Rs. 113.70 lakhs at the close of the current year on account of the expenditure on Capital Works. As the Government propose to incur a Capital expenditure of Rs. 19.37 lakhs during the next year, the net delcit is estimated at Rs. 17.58 lakhs. The Government Account is, thus, expected to close with a balance of Rs. 96.12 lakhs. The cash balance of the State, which stood at Rs. 57.55 lakhs at the beginning of the current year, is expected to stand at Rs. 44.52 lakhs at the close of the current year and at Rs. 44.57 lakhs at the close of the ensuing year.

Extracts from Directors' Report:

Report for the year ended 31st December, 1932, shows a deficit of Rs. 26,222-13-1 on the Season's working.

On transfer of the above to Profit and Loss, and after sundry adjustments, including the appropriation of Rs. 30,000 from Reserve Fund, there is a credit balance of Rs. 9,949-0-5.

Dividend.—The dividend on the Preference Shares was paid on 30th December, 1932, leaving a balance of Rs. 1,949-0-5 which it is proposed to carry forward to 1933.

Crop weighed out 11,314 maunds as compared with 9,000 maunds estimated and 8,234 maunds in 1931.

The average selling price was 5 annas 3 pies per lb. as against 5 annas 7 pies in the previous year.

Planted Area remains unaltered at 1,324.91 acres.

Estimates for 1933 have again been prepared with a view to reducing expenditure in all possible directions and provide for a crop of 10,000 maunds for an outlay of Rs. 2,53,178 including Inland Freight and Sale Charges.

RUNGAMATTEE TEA CO., LD.

Extracts from Directors' Report:

Report covers the year ended 31st December, 1932.

The result of the Season's working is a profit of Rs. 23,920-12-6 which has been transferred to Profit and Loss Account. After sundry adjustments there is a balance at credit of that account of Rs. 27,158-11-1.

Dividends.—We propose that a dividend of 10 per cent. be declared at the Annual Meeting and to carry forward Rs. 9,658-11-1.

Crop weighed out 6,597 maunds as compared with 5,500 maunds estimated and 4,952 maunds in 1931.

The average selling price was 4 annas 10 pies per lb. against 4 annas 11 pies in the previous year.

Planted Area.—The area under cultivation remains at 768.95 acres but of this 73 acres at present lie fallow, an additional 42½ acres of unproductive tea having been dropped during the year.

Estimates.—For 1933 have again been compiled on strictly economical lines and provide for a crop of 5,500 maunds for an outlay of Rs. 1,26,886 including Inland Freight and Sale Charges.

DILARAM TEA CO., LD.

Total	...	3,27,265	Total	...	3,27,265

Extracts from Directors' Report:

Report for Season 1932 shows a revenue profit of Rs. 19,707-10-9.

After providing for taxation, transferring Rs. 5,000 to Reserve, and making sundry adjustments, there remains at credit of Profit and Loss Account the sum of Rs. 18,950-7-2, from which we recommend the payment of a dividend of 8 per cent. for the season absorbing Rs. 16,000 and that the balance of Rs. 2,950-7-2 be carried forward.

The factory and withering accommodation as well as all machinery were totally destroyed by a disastrous fire which occurred in April. The loss was fully covered by insurance, and a complete replacement has since been made.

Growing conditions were poor and the garden suffered considerably from attacks of blister blight throughout the season. A severe hailstorm resulted in a considerable loss of leaf, which was, however, covered by insurance. Manufacture was carried out at an adjoining factory. A crop of 760 maunds was secured, for which an average of annas 11-2 per lb. was obtained, comparing with a crop of 969 maunds sold at an average of annas 14-9 per lb. in the previous year.

Estimates have been framed for a crop of 1,046 maunds to cost Rs. 55,780 at the Garden and Rs. 12,966 in Calcutta.

ANANDA (ASSAM) TEA CO., LD.

			Cash	...	908
Total	...	3,52,259	Total	...	3,52,259

Extracts from Directors' Report:

Report covers the Season 1932.

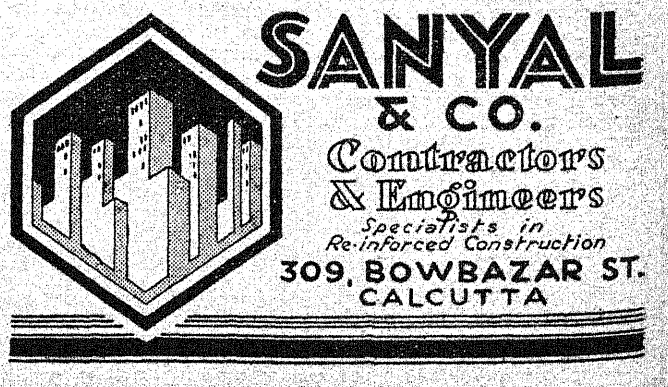
Planted Area.—With the exception of approximately ¾ acre only, no new planting was done during the year. The total area now under Tea is 196.86 acres. The whole area was completely infilled during the year with excellent results, and all the young tea is reported as having made substantial growth during the year. Under the provisions of the restriction scheme it may not be possible to extend the planted area for the next year or two, but with the continued progress of the young tea and the prospects of a high yield per acre, there should be a very considerable improvement in results.

Crop.—Climate conditions throughout the season were fairly good and a crop of 747 maunds of tea was secured which sold at an average of annas 6-2 per lb. comparing with a crop of 604 maunds in the previous year which sold at an average of annas 6-8 per lb. A useful standard of manufacture was maintained throughout the season and, but for the lower market which prevailed, a considerably higher average would have been obtained.

Accounts.—Total expenditure for the season amounted to Rs. 51,928-11-4 against which the proceeds of tea sold came to only Rs. 23,161-5.

Finance and Development.—The response to the invitation to shareholders to subscribe to a Debenture Issue was practically negligible, but with the improved prospects for the Industry and in spite of the provisions of the restriction scheme above mentioned, it is confidently hoped that the loss in working the garden during 1933 will be much reduced. The financial position of the Company would, however, be strengthened by the issue of a Debenture Loan for Rs. 1,00,000 and if and when conditions show a further improvement, the invitation to subscribe to this will be renewed.

Estimates.—These have been framed for a crop of 1,000 maunds to cost Rs. 38,632 at the Garden and Rs. 11,918 in Calcutta.



LONGAI VALLEY TEA CO., LD.

Profit for 1932, £1,575 (against a loss of £5,922 for 1931), out of which depreciation of investments amounting to £499 has been written off. The debit balance carried forward is now reduced to £20,499. The crop of 1,061,726 lb. (against 973,279 lb.) realized an average price equal to 6.64d. per lb. in London (against 6.17d.).

MAKUM (ASSAM) TEA CO., LD.

Profit for 1932, £774 (against £3,987 for 1931), which has been added to the sum carried forward, raising it to £1,669. The outturn for the season was 1,986,757 lb. (against 1,917,588 lb.). Floating assets, £52,045; current liabilities, £15,391.

UPPER ASSAM TEA CO., LD.

For the first time since 1897 the Directors have to report a loss on the season's working. The deficiency amounts to £7,056, but is lowered to £6,162 after crediting interest and sundry revenue.

The unfavourable result is attributed entirely to the depressed state of the tea markets caused by the overproduction of the commodity. The Directors state that every effort is being made to keep costs to the lowest point consistent with efficiency, and it is hoped that with the incidence of the restriction scheme better figures will be shown next year.

The credit balance of £72,729 brought in is reduced to £66,567, which is carried forward, the Board having decided not to recommend a dividend out of accumulated profits.

Yield in 1932 amounted to 2,628,643 lb. (against 2,688,250 lb.), the average sale price working out at 9.52d. compared with 11.69d. for the previous year and 1s. 1.44d. for 1930. The current season's crop is estimated at 2,493,120 lb. of fine quality tea.

RAJMAI TEA CO., LD.

Net profit for 1932, after charging £5,250 for income-tax, £12,498 (against £39,552 for 1931). A final dividend of 12½ per cent. is recommended on the Ordinary shares, making 27½ per cent. for the year (against 65 per cent.), and capital increase expenses amounting to £617 are to be written off, leaving £8,812 to be carried forward (against £13,201 brought into the acounts). The total crop manufactured during the year amounted to 1,445,058 lb. (against 1,546,595 lb.).

ASSAM CONSOLIDATED TEA ESTATES LD.

Loss for 1932, £8,423 (against £8,840 for 1931). After adding interest on 6 per cent. 20 Years Notes, and Garden Managers' commissions, and deducting £869 income-tax recovered, the debit balance carried forward is increased from £16,659 to £31,684. The total restricted outturn for the year amounted to 3,217,944 lb., an increase of 3,704 lb. on 1931. The teas have been sold in Calcutta at an average gross price of 4.71 annas per lb., equivalent, at 1s. 6d. per rupee, to 5.30 pence per lb. and in London at 8.43 pence per lb., exclusive of the estimated value of the unsold portion of the crop. The stock of unsold tea has been estimated at an average gross price of 8.40 pence per lb.

EMPIRE OF INDIA AND CEYLON TEA CO., LD.

The Company reports a loss, after crediting income-tax recovered, of £17,564, against which has been placed £16,500 transferred from general reserve and £1,399 withdrawn from income-tax reserve. The resulting credit balance increases the sum carried forward to £1,208. A loss of £23,977 was incurred for 1931. The Preference dividend is in arrear from January, 1931. Floating assets, including investments at market value, £286,148; creditors, £57,582. The crop harvested during the year amounted to 5,210,305 lb. (against 5,688,838 lb.). It was produced at a cost of 9.78d. per lb. (against 10.25d.) and realized a gross price of 8.62d. per lb. (against 8.76d.).

SINGLO TEA CO., LD.

During 1932 the Company secured a crop of 3,970,640 lb. (against 3,779,680 lb. in 1931), which realized a gross average price of 8.36d. per lb. (against 8.30d.). The accounts show a profit (including £1,691 income-tax credit for the year) of £14,189. A dividend of 2½ per cent. is recommended on the Ordinary shares (against nill) and £900 is to be transferred to the providend fund, leaving £5,358 to be carried forward (against £3,934 brought into the accounts). For 1931 there was a profit of £83 after transferring £5,868 from income-tax account. Floating assets, £147,994; current liabilities, £25,973.

CHULSA TEA CO., LD.

The crop rose from 2,746,868 lb. in 1931 to 4,654,034 lb. in 1932 and the revenue profit rose from £10,369 to £19,148. After adding interest receipts and deducting sundry charges, the net profit for last year is £23,245. A dividend of 6 per cent. is proposed for the year on the Ordinary shares (unchanged) and the balance forward will be £41,454 (against £40,409 brought in). Under the restriction scheme it is estimated that production for 1933 will be limited to about 3,680,000 lb. In the balance-sheet floating assets total £246,000, while current liabilities amount to only £50,000.

CHANDPORE TEA CO., LD.

Working profit for 1932, £2,709 (against a loss of £5,555 for 1931). A dividend of 4 per cent. is to be paid (against nil), and £901 is to be carried forward (against £389). The outturn for the year amounted to 1,269,520 lb. (against 1,087,390 lb.). The previous best crop harvested was in 1929, when 1,143,393 lb. were obtained. The cost of production was 6.16d. per lb. (against 7.23d.), and the average sale price was 6.62d. per lb. (against 6.00d.).

NEDEEM TEA CO., LD.

The Company earned a working profit of £18,074 in 1932. This compares with a loss of £27,673 for 1931. Including £987 interest receipts and £5,174 profit on sale of investments the total profit for the year was £24,235, which reduces the adverse balance carried forward to £5,342. The Preference dividend for 1931 and 1932 is in arrear. Floating assets, £167,784; current liabilities, £91,558. The crop harvested during the year rose by 1,862,941 lb. to 6,942,753 lb. Of the 1932 crop 2,330,939 lb. were sold in Calcutta at an average of 4.67 annas per lb. and 4,611,814 lb. were sold in London at 8.82d. per lb.

BAGRACOTE TEA CO., LD.

A loss on revenue account of £2,591 is reported for 1932 (against a profit of £2,496 for 1931). After crediting transfers of £2,204 from building and machinery reserve and £1,051 from taxation reserve, together with interest receipts, there is a net credit balance for the year of £1,536 (against £3,476 for 1931, without making transfers from reserves). A dividend of 3 per cent. is proposed on the Ordinary shares (5 per cent. was paid for 1931); the balance forward is reduced from £3,442 to £588. The crop rose from 1,361,111 lb. to 1,526,765 lb. For the crop year the restricted crop is estimated at 1,280,000 lb. Floating assets, £63,759; current liabilities, £11,470.

DOOM DOOMA TEA CO., LD.

The outturn of the Company rose from 4,231,554 lb. in 1931 to 4,534,626 lb. in 1932, but the total average sale price fell from 14.35d. to 11.57d. a lb., or to below cost, which amounted to 12.01d., against 12.82d. a lb. There was a loss on crop account of £5,269 (against a profit of £31,607), and after adding interest, etc., and meeting income-tax and other charges the net loss for the year becomes £6,762 (against a net profit of £21,374). A dividend of 2½ per cent. is proposed for the year (against 10 per cent.), requiring £6,625, and this, together with the loss, reduces the credit balance to go forward from £54,891 to £41,504. Floating assets total £212,000, against current liabilities of only £24,000. Under the restriction scheme the estimated outturn for 1933 is 3,668,377 lb.

ROMAI TEA CO., LD

Net loss for 1932, £496 (against a profit of £1,759 for 1931). A dividend of 7½ per cent. is to be paid (against 12½ per cent.), out of the sum carried forward, which will then stand at £6,226. A crop of 458,340 lb. was manufactured during the year. Cash and investments stand in the balance sheet at £13,200.

PAHARGOOMIAH TEA ASSN., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	2,60,000	Block (nett) ...	2,93,550
Reserve ...	2,15,000	Crop A/c ...	92,709
Debts ...	21,919	Outlay ...	643
Profit & Loss ...	29,195	Outstandings ...	8,117
		Deposits ...	1,050
		Cash & Invests. ...	1,30,045
Total ...	5,26,114	Total ...	5,26,114

Extracts from Directors' Report:

Report refers to the year ended 31st December, 1932.

Outturn.—For the season was 6,716 mds. 14 lb. as compared with an estimated crop of 5,000 mds. and 4,906 mds. 22 lb. manufactured in 1931.

The year commenced with a severe drought, but conditions improved during the month of June and remained favourable for growth throught the manufacturing season.

Of the crop 6,166 mds. 68 lb. were shipped for sale on the London Market, and the remainder was sold in Calcutta. The average for the whole season is equivalent to 5.928 annas nett per lb. as compared with 8.226 annas actually received in 1931.

The usual standard of quality was well maintained, but unfortunately a dull market prevailed.

The result of the season's working, after deducting Manager's and Assistant's Commissions, is a profit of Rs. 18,737-5-3 which, with the adjustment of the 1931 Accounts, brings the credit at Profit and Loss Account to Rs. 29,194-14-1, which we propose to allocate as follows:—To payment of 5 per cent. Dividend Rs. 13,000, to place to Improvement Fund Rs. 10,000, to carry forward Rs. 6,194-14-1, total Rs. 29,194-14-1.

In view of the fact that the existing machinery is unable to comfortably deal with the large crops now being harvested, we have proposed an allocation of Rs. 10,000 from last season's profit to form the nucleus of an Improvement Fund, but we do not, however, propose to subscribe to this fund indefinitely and will discontinue allocations of this nature when immediate Factory requirements have been fulfilled. The General Reserve Fund remains at Rs. 2,15,000.

Estimate.—For the current season provides for a crop of 5,500 mds. at an expenditure of Rs. 1,89,588.

The above estimate is, subject to modification, in the event of restriction in crop being agreed to by the Industry.

THE BANK OF MYSORE, LTD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	20,00,000	Cash Credits and	
Reserve ...	18,75,000	Bills ...	1,50,25,318

Profit & Loss a/c.	2,24,186		
Total ...	2,60,61,157	Total ...	2,60,61,157

Extracts from Directors' Report:

The result of the Bank's working for the half-year ended June 30, 1933, is a surplus of Rs. 2,23,286-5-9. From the balance of Rs. 50,899-13-5, at credit of Profit and Loss Account as at December 31, 1932, Rs. 50,000 had been transferred to Reserve Fund, thus raising it to Rs. 18,75 lakhs. The total amount available for distribution was Rs. 2,24,186-3-2, which the Directors have disposed of as follows: in payment of an interim dividend at the rate of 12% per annum free of income-tax, on the paid-up capital absorbing Rs. 1,20,000 and to be carried forward to next account Rs. 1,04,186-3-2. The interim dividend will be payable on 31st July, 1933.

KOOMSONG TEA CO., LD.

Profit for 1932, including £1,439 profit on sale of investment, £5,739 against a loss of £3,421 for 1931, when £2,549 was set aside for income-tax). A dividend of 5 per cent. is to be paid and £2,287 is to be carried forward (against £298 brought into the accounts). Last year a dividend of 5 per cent. was paid out of the reserve. Floating assets, £41,774; creditors, etc., £4,984. The crop harvested declined from 894,385 lb. in 1931 to 776,442 lb. in 1932.

		Outstandings ...	3,83,902
		Cash & Deposits ...	1,92,693
Total ...	91,58,947	Total ...	91,58,947

Extracts from Directors' Report:

The Directors and the Managing Agents submit herewith their Report and Statement of Accounts for the half-year ended 30th June, 1933.

The Revenue Account shows a profit of Rs. 3,73,441-1-5, to which has to be added Interest on Security Bonds Rs. 3,902-6, amount brought forward from previous half-year Rs. 2,20,477-3, there remains for disposal the sum of Rs. 5,97,820-10-5.

For Depreciation there has been set aside:—

On Buildings and Machinery Rs. 50,000, the Directors and the Managing Agents recommend payment of the following dividends free of Income Tax:—Rs. 3 per share on the Preference Shares Rs. 48,000, Rs. 12-8 per share on the Ordinary Shares Rs. 3,00,000, carrying forward in Profit and Loss Account Rs. 1,99,820-10-5, total Rs. 5,97,820-10-5.

During the period under review the Mills have conformed to the regulations of the Short-time Agreements decided upon by the Indian Jute Mills Association, and have worked 40 hours weekly with the requisite quota of looms sealed.

Jute has been entered at or under cost price and fabrics, of which there are no unsold stocks, at contract rates.

Rai Rameswar Nathany Bahadur, being absent from Calcutta, does not sign the Report.—W. T. Hunter, E. L. Watts, F. M. Buckland, Directors, Jardine, Skinner & Co., Managing Agents. Calcutta, 21st July, 1933.

RAJAH ALLI TEA ESTATES CO., LD.

Net profit for 1932, including £1,163 profit on realization of investments, £2,926. A dividend of 10 per cent. is recommended (against 15 per cent. for 1931), but as this payment will absorb £4,000, the sum carried forward is reduced from £22,025 to £20,951. The crop harvested amounted to 433,774 lb. (against 484,396 lb.).

KACHARIGAON TEA CO., LD.

Loss for 1932 £2,630 (against £4,240 for 1931). After crediting £132 transferred from income-tax account and charging the dividend on the Preference shares to 30th June, 1932, the debit balance carried forward is increased from £64 to £2,658. The crop manufactured during the year amounted to 417,622 lb. (against 392,698lb.). Severe drought during the cold weather for the second season in succession resulted in poor leaf returns during the early months particularly, and second flush quality was absent.

KANKNARRAH CO., LD.

Synopsis of Balance Sheet:

Accounts relate to the half-year ended 30th April, 1933.

After making allowance for Depreciation, the half-year's working has resulted in a profit of £3,160 12s. 0d.

The sum of £20,569 8s. 5d. brought forward is to be added to the above profit, and there is, therefore, an amount of £23,730 0s. 5d. for disposal.

The Directors recommend that this sum be dealt with as follows:—In payment of a dividend of 5 per cent. less income-tax for the half-year (making 10 per cent for the year), £6,000, carry forward to next half-year £17,730 0s. 5d. to £23,730 0s. 5d.

The output during the six months to 30th April, 1933, was 192,759 tons, which compares with 257,167 tons raised in the corresponding period in the previous year.

Market conditions have necessitated a further curtailment in the output, the raisings for the year being restricted to approximately 100,000 tons less than in the previous twelve months.

The plans for the installation of additional screening plant are nearing completion.

MAJULI TEA CO., LD.

Loss for 1932, £6,689 (against £5,362 for 1931). The debit balance carried forward now amounts to £16,431. Floating assets, £53,331; creditors, etc., including £47,262 bank overdraft, £55,893. The Preference dividend is in arrear from 1st January, 1931. A crop of 1,646,900 lb). A drought of still greater severity occurred for the third successive year, entailing a much lower crop than the estates are normally capable of producing, especially to mid-August. Consequently the Company was robbed of the early invoices of quality teas, and the later outturn had to meet a most unfavourable market. Last February shareholders were invited to subscribe for £30,000 Eight per cent. First Mortgage Convertible Debenture Stock. Subscriptions from shareholders amounted to £9,000 only, but the Secretaries arranged for the balance of the issue, which is now fully subscribed.

MANABARRIE TEA CO., LD.

Synopsis of Balance Sheet:

Total	...	3,39,972	Total	..	3,39,972

Extracts from Directors' Report:

Accounts cover the year ended 31st December, 1932.

The Season's working has resulted in a loss of Rs. 587-13-9 which has been trasferred to Profit and Loss Account. After sundry adjustments there is a balance at credit of that account of Rs. 10,778-5 which we propose to carry forward.

Crop weighed out at 3,834 maunds against 2,843 maunds in 1931.

The average selling price was 5 annas 4 pies per lb. compared with 6 annas 11 pies in the previous year.

Planted Area remains at 730 acres.

Estimates for 1933 allow Rs.1,01,779 for a crop of 3,650 maunds including Inland Freight and Sale Charges.

BRAHMAPOOTRA TEA CO., LD.

The report for 1932 states that 440,664 lb. of tea was manufactured—a decrease of 269,864 lb. compared with the 1931 crop. Including a portion of the crop at an estimated figure the total average price realised for the tea sold in London was 8.87d. per lb. compared with 11.51d. The overall cost per pound, exclusive of taxation, averaged 10.25d. (against 10.81d.). The accounts show a loss of £12,107 (against a profit of £7,329), reducing the credit balance brought forward to £12,581. A dividend of 5 per cent. is recommended (against 15 per cent.), and £6,856 is to be carried forward.

ASSAM-DOOARS TEA CO., LD.

The accounts for 1932 show a profit of £27,007 (against £29,076 for 1931). The Directors have transferred £6,000 to taxation reserve, and they recommend a dividend of 10 per cent. on the Ordinary shares (unchanged), leaving £12,903 to be carried forward (against £10,739 brought into the accounts). Floating assets, £186,045; current liabilities, £80,243. The crop harvested rose from 4,303,792 lb. in 1931 to 5,340,649 lb. in 1932.

JALINGA TEA CO., LD.

Net profit for 1932, £281. This has been added to the sum carried forward, increasing it to 817. The outturn from the garden for the year was 345,388 lb. (against 337,201 lb. in 1931), of which 310,438 lb. were sold in London at an average price of 6.95d. per lb. (against 6.65d.), 32,406 lb. were sold in Calcutta, and 2,544 lb. went in trade tare and loss in weight.

BRITISH ASSAM TEA CO., LD.

Loss for 1932, £2,384 (against £11,175 for 1931). After crediting £146 income-tax refund and transferring £103 to staff provident account, the debit balance carried forward is increased from £632 to £2,973. The crop declined by 132,108 lb. to 716,457 lb. owing to severe drought in the district during the earlier months of the season. The quality of the teas, however, shows a marked improvement, and in spite of the lower market ruling the average price received for the teas sold in London exceeded that of 1931 by 2¾d. per lb.

HOPE TEA CO., LD.

Profit for 1932, £37,498 (against £59,676 for 1931), out of which £8,600 (against £18,000) has been reserved for taxation. A final dividend of 12½ per cent. is to be paid on the Ordinary shares, making 20 per cent. for the year (against 32½ per cent.), and £15,640 is to be carried forward (against £17,440 brought into the accounts). Floating assets, £257,842; current liabilities, £51,097. A crop of 2,432,102 lb. was secured during the year (against 1,874,060 lb.).

BORBHEEL TEA CO., LD.

Net profit for 1932, £1,303 (against £2,840 for 1931). A dividend of 7½ per cent. is recommended (against 12½ per cent.), and £5,641 is to be carried forward (against £6,003 brought in). The crop manufactured amounted to 617,520 lb. (against 600,720 lb.).

BORDUBI TEA CO., LD.

A reduction in net profit from £21,787 in 1931 to £9,743 is shown by the accounts for 1932. It is proposed to pay a dividend of 10 per cent. (against 25 per cent.) and to carry forward a balance of £7,758 (against £7,015 brought into the accounts). Floating assets, £68,534; current liabilities, including dividend requirements, £18,463. The crop manufaqtured during the year amounted to 1,078,400 lb. (against 1,141,280 lb.).

BORELLI TEA CO., LD.

Net profit for 1932, £5,154, to which is added £5,181 brought forward. A dividend of 7½ per cent. is to be paid on the Ordinary shares (against 12½ per cent.), and £4,089 is to be carried forward. A crop of 1,453,711 lb. was harvested during the year. Climatic conditions during the year, states the report, were most unfavourable. A severe drought retarded growth up to the end of July, and in consequence the early invoices of good quality were lost. The later output met a depressed market, which was especially unfavourable for medium Assam teas.

BARGANG TEA CO., LD.

Net loss for 1932, £11,505 (against £6,316 for 1931), from which has been deducted £6,000 transferred from reserve and £348 withdawn from income-tax account. After providing for the Preference dividend to 30th June, 1932, a debit balance of £5,499 is carried forward (against a debit of £42 brought into the accounts). Floating assets, £27,790; creditors, £5,312, bank overdraft, £25,620. The crop harvested during the year was 883,801 lb. (against 868,512 lb.). In January shareholders were invited to subscribe for £27,000 Participating First Mortgage Debenture Stock. Shareholders subscribed just over £10,000 and the Secretaries arranged for the balance of the issue, which is now fully paid. Climatic conditions during the year, states the report were bad. For the third successive year there was a severe drought, which delayed growth until August and consequently deprived the Company of the valuable second flush teas.

BRITANNIA BUILDING & IRON CO., LD

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets	Rs.
Capital	... 5,00,000	Goodwill	... 50,000

Debts	... 1,22,398	Work-in-progres	... 59,157
		Stocks, etc.	... 1,26,202
		Outstandings	... 2,09,675
		Investments	... 83,790
		Cash & Deposits	... 37,788
		Profit & Loss	... 1,254
Total	... 7,49,898	Total	... 7,49,898

Extracts from Directors' Report:

Report relates to the half-year ended 30th September, 1932.

Accounts.—The amount to debit of Profit and Loss is Rs. 75,152-3-10, to which is to be added—Depreciation Rs. 7,812-0-7, Audit Fees Rs. 1,000, total Rs. 83,964-4-5, from which is to be deducted—Balance brought forward from last account Rs. 10,245-4-4, appreciation of Investments Rs. 19,965, previous Reserve against Contracts Rs. 12,500, transfer from General Reserve Rs. 40,000, total Rs. 82,710-4-4, leaving a Debit Balance of Rs. 1,254-0-1, which it is proposed to carry forward.

The half-year under review has been by far the worst for business that the Company has experienced since its incorporation. Until towards the end of the period very little new work was offering, and orders for the Company's workshops were few and small in value. Further restrictions—both in staff and work people—were introduced, but even with this, it was impossible to avoid a heavy loss.

UNITED FLOUR MILLS CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital	... 1,50,000	Block (net)	... 2,48,001
Reserves	... 1,50,000	Wheat & Flour	... 1,43,493
Debts	... 2,76,811	Stores	... 9,804
Profit & Loss	... 497	Outstandings	... 1,72,504
		Cash	... 3,506
Total	... 5,77,308	Total	... 5,77,308

Extracts from Directors' Report:

Accounts cover the half-year ended 31st May, 1933.

Trading Conditions.—Trading results have fallen very far short of the preceding half-year, as the condition of the wheat market has been averse to Mills situated at the Ports, due in no small degree to the renewal of the Wheat Import (Duty) Act earlier in the year, and its effect on wheat prices in India in relation to other cereal foodstuffs.

Working Results.—The working results for the half-year show a loss on Revenue Account of Rs. 9,464-9-10, and after transferring Rs. 10,000 from "Reserve Fund," there is a balance at credit of Profit and Loss Account of Rs. 496-14 to be carried forward.

KALIMPONG ROPEWAY COMPANY, LIMITED.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets.	Rs.
Capital ...	4,50,000	Block (net) ...	4,49,224
Sundry creditors	1,121	Preliminary Expenses	43,228
Overdrafts with		Stores etc. ...	1,523
Managing Agents	61,454	Advances ...	7,699
		Profit & Loss a/c, ...	10,902
Total ...	5,12,576	Total ...	5,12,576

Extracts from Directors' Report:

The Managing Agents & Directors beg to present herewith the Audited Accounts of the Company for the year ended 31st March, 1933, which show a balance at debit of Profit and Loss Account of Rs. 10,902-0-7.

During the year 2,20,236 maunds of goods were transported over the Ropeway as against 2,08,057 in the previous year, but owing to the necessity for reduction in rates on certain commodities in order to combat cart competition, Gross Earnings only amounted to Rs. 50,978 as against Rs. 53,328 in the previous year.

Working Expenses at Rs. 33,295 were slightly lower in evidence it has not yet been considered safe to restore fully our rates to a more remunerative level as the carts are still in existence and would again start to operate if any chance were given to them.

Working Expenses at Rs. 33,395 were slightly lower and a Profit of Rs. 17,682 on Revenue Account was recorded. Depreciation of Rs. 10,088 has been charged this year as against Rs. 7,355 last year and after providing for all other charges the net Profit for the year is Rs. 782-15-0 which reduces the debit on Profit and Loss Account to Rs. 10,902-0-7.

The earnings of the year under review were helped very appreciably by a very good orange crop, but while at the moment traffic prospects look slightly better it is too early to form any opinion as to whether this important item of our earnings will this year again assume the same proportions as last year. Wool traffic was very poor throught they year but with the recent rise in the value of this commodity we have been pleased to note an appreciable increase of late.

Direction.—During the period under review Messrs. T. S. Gladstone and W. Hunter joined the Board in place of Messrs. S. D. Gladstone and S. C. Lyttelton who proceeded to England on leave. Sir R. N. Mookerjee, K.C.I.E., K.C.V.O. retires by rotation, but, being eligible, offers himself for re-election.

Auditors.—Messrs. Price, Waterhouse, Peat & Co., retire, but, being eligble offer themselves for re-election.

W. HUNTER,
T. S. GLANDSTONE,
R. N. MOOKERJEE, } Directors.

WORLD OF INDIAN FINANCE

Calcutta, August 10, 1933.

There has been a sharp and unexpected spurt in call money rates. After the usual Friday feeling at the last week-end, it was believed that the market would revert back to the old condition of extreme ease. At any rate, no one, who attempted last week to gauge market conditions in the current week, would have anticipated the kind of pressure that came to be felt from Monday onwards. From the enquiries that we have made, we have to conclude that the high altitude touched by money rates was due not to the actual weight of business but to the sentimental effect of the emergence as borrowers of banks who normally are lenders. The transactions put through at the higher rates were on the small side. But it was apparent that the surplus resources available in banking circles were not adequate even for this small-sized demand. It is easy to understand that on the eve of the big disbursement that is to take place on August 15, bankers should have made investments in advance, thus reducing their spare funds to a minimum. In such a situation, any special demand by parties who, as a rule, figure as lenders is calculated to push up rates to a far higher level than is warranted by the actual size of the demand.

Moreover, it is reported that blocks of government securities of the order of Rs. 75 lakhs were disposed of by one or two Chettiar firms of Madras on the Bombay and Calcutta markets. It is quite possible that most of these scrips have been absorbed by banks in anticipation of the funds that they would receive on the repayment of six per cent. 1933-36 bonds. Payment in respect of these purchases by the Eastern and Western Capitals should have meant a drain of funds from these centres to South India. For all these reasons, it seems to us that the stringency, that was experienced in the early part of this week, should be completely offset by the plethoric funds that will come into the market by mid-August. Even as it is, the pressure of Monday and Tuesday has been greatly reduced towards the finish.

No trace of this stringency is to be seen in the volume of Treasury Bills applications on the tender day or in the average rate of accepted tenders. The effect of this stringency is, however, to be seen in the larger sales of sterling which the market has made to the Government on Wednesday. At the weekly auction, applications for three months Bills came to the substantial amount of Rs. 3.06 crores. Tenders at Rs. 99-12-6 were accepted in full and those at Rs. 99-12-3 were allotted approximately 33 per cent. Total amount accepted was Rs. 1½ crores. The average discount rate was As. 14-6, which compares with As. 15 in the previous week, Rs. 1 on July 25, Rs. 1-1-6 on July 18, and Rs. 1-2 on July 11. This steady and continuous fall in the discount rate, resulting in the creation of a record week after week, must be most gratifying to the financial authorities. It is difficult to say whether at these record low rates, banks are as keenly interested as would appear from the large volume of tenders submitted. From the statement of the Imperial Bank for the week ended August 4, it is seen that government securities stand at Rs. 42.47 crores, recording a rise of Rs. 1¼ crores over the previous week. Does this mean that a substantial portion of the Treasury Bills sold in the last week was taken up by special quarters? The cash balance of the Imperial Bank is nearly Rs. 25 crores. It was Rs. 27¾ crores last week. There is no special reason why such a large cash balance should be maintained. Even if the Imperial Bank is able to get only 15/16 per cent. by investing in Treasury Bills, this is better than nothing. Our own view is, therefore, that in this process of persistent decline in the discount rate on Treasuries, the avid demand from the Imperial Bank is an important factor.

So far as exchange banks are concerned, it is obvious that they could have had no interest. For one thing, demand for interbank call money was most keen as amongst exchange banks. For another thing, that applications on the weekly sterling tender day came to over £2 million shows that exchange banks were short of cash and were trying to put themselves in funds by drawing on London. In other words, the competition for Treasury Bills is confined, more or less entirely, to the Imperial Bank and the Indian Joint Stock banks. It seems also safe to conclude that at any rate in the week ended August 4, the Imperial Bank secured a big slice.

In analysing, in the last week's number, the

essentials of the giltedge situation, we pointed out that there were seven distinct bullish factors which we set down as follows:

(1) The professionals are oversold.
(2) Tired bulls of the earlier boom have mostly liquidated their holdings.
(3) Most of the rise in recent weeks is accounted for by genuine investment activities.
(4) Further buying on *bonafide* investors' account for fairly substantial amounts is in prospect.
(5) Money conditions are bound to remain extremely slack for at least two months.
(6) The creation of a record, week after week, in the matter of the low yield on Treasury Bills must have a heartening influence on giltedge values.
(7) So far as can be foreseen, there is no need to be apprehensive of any ill-timed tactics from the Government.

The position in the current week has been slightly altered. Except for items 5 and 7, the other factors remain unchanged. .So far as item 5 is concerned, we have already stated our opinion that this week's stringency is purely temporary, and will melt away when the full force of the sums released on August 15 is felt. As for item 7, the Government have certainly been guilty of ill-timed tactics in so far as they have authorised the Punjab Government to come out on the market with a loan giving a running yield of 4.17 per cent. and a redemption yield of slightly over 4.4 per cent. Detailed discussion of the Loan will be made in a later paragraph. For the present context, suffice it to say that the Government are unduly and unnecessarily generous to the investor. There can be no justification whatsoever for the offer of an yield of 4.4 per cent. in the present state and temper of the giltedge market. Even granting that the yield on a provincial government loan has to be somewhat higher than that on a loan of the Government of India, a redemption yield of 4 ⅛ per cent. should have proved a sufficient inducement to investors. The 4 per cent. 1948 Punjab Loan, has now been placed on the market at an issue price of Rs. 98; we are definitely of the view that the issue price could have been Rs. 98 or 98½; and that at such an issue price, the Loan would have been assured of a favourable response. The fixing of the issue price at Rs. 96 is calculated to disrupt giltedge values. Again and again have we pointed out that the offer of an unnecessarily high yield on a New Loan is a positively bearish factor for the success of the loan. Again and again have our monetary authorities refused to see the commonsense view of the matter. They have shown themselves incapable of appreciating the psychological aspects of new borrowing. In the current week, there were, therefore, two distinct bearish influences, namely, (1) the issue of the Punjab Loan at a far higher yield than was justified by the prevalent conditions in the giltedge market; and (2) the sale by Madras parties of securities for a fairly big amount. Rumours were also current that the Imperial Bank was selling securities. We believe that there is no foundation for this rumour. It is the Madras sales that tended to create the impression that the Imperial Bank might be selling giltedge.

That in spite of two such powerful bearish factors, the market held its ground and the prices maintained their level is clear and convincing testimony of the intrinsic vitality of the giltedge market in the existing circumstances. Six weeks ago, two factors of this nature would have caused a severe landslide. The market has also received strength from the improved prices of India sterling securities. In London, credit conditions have been most easy. The average rate for Treasury Bills was 5s. 5d.—a record low rate for all time. Banks have had to increase their *portfolio* of giltedge owing to the paucity of other suitable investments. There has been a rise of nearly two points in 3½ per cent. India sterling paper. This rise in London combined with genuine investment enquiry in India has offset the depressing influence of large-sized sales from Madras and an ill-timed issue of the Punjab Government Loan with an unnecessarily high yield.

Taking a broad view of the giltedge situation, we do not see any reason, despite current week's happenings, why we should revise our earlier view. On the other hand, our confidence in the technical position of the market is more than confirmed. We may, therefore, repeat that, bar abnormal developments or clumsy tactics, the future of giltedge is distinctly brighter.

The loan of the Punjab Government is in the form of 4 per cent. 1948 bonds at an issue price of Rs. 96. The Loan will consist of two sections: (A) cash and (B) Conversion of 9¼ per cent. Punjab Bonds. Section A will be closed to subscriptions without notice as soon as it appears that a total of Rs. 150 lakhs (nominal) approximately has been reached, and in any case not later than the 31st August, 1933. In the event of subscriptions in this section exceeding the limit of Rs. 150 lakhs (nominal) approximately, partial allotment will be made. Section B will remain open up to the 31st August, 1933.

The total indebtedness of the Punjab Government is Rs. 1,86,63,900 in the form of 6¼ per cent. 1933 bonds; and Rs. 86,80,400 in the form of 5¾ per cent. 1937 bonds. The running yield on the New Loan works out to 4.17 per cent. and the redemption yield to slightly over 4.4 per cent. The general exceptation in market circles is that the cash loan will be heavily oversubscribed; and that the New Loan is bound to go to a premium of at least 2 per cent. by the end of the month. As the Government have to be prepared for heavy demands, we would suggest to them that they should make clear their intentions as to whether the list will be closed as soon as the approximate total of Rs. 1½ crores is reached or there will be a *pro rata* allotment. It was lack of precise information on this matter that was responsible for the heavy "stagging" that ook place in he case of the 3½ per cent. 1947-50 loan. If there is to be a *pro rata* allotment, let the list be kept open at least for the first

(Continued on page 365).

Reserve Fund £ 8,000,000

GENERAL BANKING and EXCHANGE business of every description transacted, including the issuing of WORLD LETTERS OF CREDIT and TRAVELLERS CHEQUES payable throughout the world.

FIXED DEPOSITS received, SAVINGS BANK ACCOUNTS withdrawable by cheque.

Head Office: LONDON, E. C. 3.

Eastern Dept.: 39, Threadneedle Street, LONDON, E. C. 2.

Over 1,900 BRANCHES IN ENGLAND AND WALES.

Branches in the East:
BOMBAY, CALCUTTA, KARACHI, RANGOON, DELHI, NEW DELHI, SIMLA, LAHORE, AMRITSAR, RAWALPINDI, MURREE, SRINAGAR, GULMARG.

FINANCE ABROAD

INTERNATIONAL LOAN TO AUSTRIA.

The crop of new Government loans, to which we referred last week in these columns, has been followed by the issue of the International Loan for Austria. It is reported that on August 5, the French Treasury announced that the French portion of the loan of 300 million Schillings to Austria guaranteed by Great Britain, France, Italy and Belgium will be issued next week. On August 2, the Belgian Parliament approved of the Belgian share of the loan of 25 million Belgian francs. On August 9, the prospectus of the British portion of the loan was issued. It is called the Austrian International Guaranteed Loan 1933-53 and amounts to £4¼ million. The bonds are issued at £96 and carry a 3 per cent. interest. The principal and interest are guaranteed by the British Government.

Early History of Austrian Loan.

It will be recalled that on the first week of the meeting of the World Economic Conference in London, it was reported that the British Government had agreed to place on the London market the British share of the international Austrian loan. The report was based on the fact that Dr. Dolfuss, the Austrian Chancellor, was found to stay longer in London than he had originally programmed and this was in the face of renewed international troubles in Austria. The amount of the loan promised to Austria inertionally was 300 million gold schillings, of which the British share amounted to 100 million schillings. Great Britain should naturally be less dilatory in giving effect to the understanding than other countries, for in her case the new loan would only have the effect of converting the short-term credit granted by the Bank of England into a long-term loan with the guarantee of the Treasury as to payment of principal and interest. It is expected that, as the original credit of the Bank of England was granted previous to the suspension of the gold standard, the present sterling equivalent of 100 million gold schillings may leave a balance which might be handed over to Austria.

France's Share.

As regards the French portion of the loan, which was guaranteed under the terms of the Geneva Protocol of July 15, 1932, it will be remembered that M. Herriot promised the early flotation at Lausanne. The consent of the French Parliament was obtained several months ago but the delay is to be attributed to the socialist opposition in the Chamber to Dr. Dolfuss. Immediately after his understanding with the British Treasury in the middle of June last Dr. Dolfuss conferred with M. Paul Boncour, the Finance Minister and M. Daladier, the Prime Minister, with a view to persuade the Government to make the promised amount available to Austria, with the least delay possible. Considering the large part that political sentiment has always played in the placing of foreign loans on the Paris capital market, it is not unreasonable to presume that the increasing heat and friction of Austro-German relations in the last fortnight have had a great deal to do with expediting the fulfilment of the promise made at Geneva. According to a London cable, the proceeds of the loan after providing repayment of the advance of 100 million schillings by the Bank of England to the Austrian Government at the time of the Credit Anstalt crisis of 1931 will be used to consolidate the existing short-term debt position of the Government and to reinforce the monetary reserves of the National Bank of Austria.

Repayment of British Loan by France.

An interesting aspect of the return of half the British credits of £30 million to the Bank of France at the end of last month falls to be recorded in these columns. It would appear that the repayment was made possible by the selling of francs by the British control. This, in effect, means that the repayment of the British credits was done by means of indirect borrowing from the London market. In this, as in the extension of the 30 million pounds of credit to France, history has repeated itself. For it will be remembered that the Franco-American credit of £130 million granted to Britain at the time of the sterling crisis of September, 1931, was also made possible by the large-scale influx of foreign funds into London in the opening months of 1932. Of late, there has been no repayment of loan except through fresh borrowing, often from the credit country itself. Those who like to represent the British credit as a turn of the wheel in favour of Britain would be gratified to note another similarity between the two international transactions.
